
4 Job Changing and Occupational Sex Segregation: Sex and Race Comparisons

RACHEL A. ROSENFELD

The U.S. occupational structure is and has been extremely sex segregated (see Beller, in this volume). The extent and stability of such sex segregation prevents most individuals from considering possible mobility between sex-typical and atypical occupations. Such mobility does, however, occur. World War II was a dramatic example of a situation where many women changed from typically female to typically male jobs. Even under less extreme circumstances, the sex composition of a person's occupation is not a constant throughout one's work life, as will be shown here and as others have demonstrated (Wolf and Rosenfeld, 1978; England, 1982b; Corcoran et al., in this volume; Jusenius, 1975; *Sociology of Work and Occupations*, vol. 9, number 3, 1982). Using 1973 data on job changers, this paper will focus on change in occupational sex composition that people experience with a change in employer. It will describe the movement by black and white women and men¹ among

occupations with different sex compositions and will predict movement to or from sex-atypical occupations using a range of individual and job history variables.

EXPLANATIONS OF SEX SEGREGATION

Explanations for why women end up in typically and predominantly female occupations vary depending on whether the explanations focus on labor supply or labor demand. Both types of explanations usually fail to consider that a person might break through the sex segregation barrier.

Labor Supply Explanations

Labor supply arguments about sex segregation often give the impression that a person makes a once-in-a-lifetime and usually sex-typical occupational choice. Socialization explanations, one type of supply side argument, suggest that women are socialized to plan for

¹ There are, of course, other ethnic groups whose occupational sex segregation would be interesting and useful to study. One might like, for example, to follow Malveaux's (1982) lead and look at the position of Hispanics and their mobility. The data set used here, how-

ever, identifies race/ethnicity only as white, black, and other. The other group is extremely small and probably quite heterogeneous. In what follows, those identified as other are dropped from the analysis, leaving comparisons between blacks and whites.
