Sex and death: What more could there be to life? But in evolutionary biology, Darwin is in the details – and these details are difficult to convey in a clear and accurate, but captivating way. In their superb introduction, *Sex and Death*, Sterelny and Griffiths excel in showing just how complex and fascinating the philosophy of biology is. *Sex and Death* is a well-structured introduction consisting of 15 chapters, each with several subsections. Yet the book is not a disjointed catalogue of the main issues in the philosophy of biology. On the contrary, the approach is both synoptic and synthetic. Each contemporary issue in the philosophy of biology is charitably described, then linked to other debates by means of a number of philosophical *leitmotifs* that run throughout the book. The result is an introduction that contains many parts, but reads as a unified whole. Moreover, the carefully maintained balance between the text's role as an introduction and as a defense of Sterelny and Griffiths' own views ensures that *Sex and Death* will captivate newcomers to the philosophy of biology, while making great reading for veterans of the field.

Part I of *Sex and Death* is a novice's introduction to the philosophy of biology. It begins with the provocatively titled chapter, "Theory Really Matters." This chapter raises many central questions in the philosophy of biology, but their full answers are deferred to subsequent chapters. They are raised here to convince the uninitiated reader of something that regulars of

*Plato and Sex* Stella Sandford, 2013-04-24 What does the study of Plato's dialogues tell us about the modern meaning of sex How can recent developments in the philosophy of sex and gender help us read these ancient texts anew *Plato and Sex* addresses these questions for the first time Each chapter demonstrates how the modern reception of Plato's works in both mainstream and feminist philosophy and psychoanalytical theory has presupposed a natural biological conception of what sex might mean Through a critical comparison between our current understanding of sex and Plato's notion of *genos* *Plato and Sex* puts this presupposition into question With its groundbreaking interpretations of the *Republic* the *Symposium* and the *Timaeus* this book opens up a new approach to sex as a philosophical concept Including critical readings of the theories of sex and sexualisation in Freud and Lacan and relating such theories to Plato's writings *Plato and Sex* both questions our assumptions about sex and explains how those assumptions have coloured our understanding of Plato What results is not only an original reading of some of the most prominent aspects of Plato's philosophy but a new attempt to think through the meaning of sex today

**What Darwin Got Wrong** Jerry Fodor, Massimo Piattelli-Palmarini, 2011-02-24 Jerry Fodor and

Massimo Piatelli Palmarini a distinguished philosopher and scientist working in tandem reveal major flaws at the heart of Darwinian evolutionary theory They do not deny Darwin s status as an outstanding scientist but question the inferences he drew from his observations Combining the results of cutting edge work in experimental biology with crystal clear philosophical argument they mount a devastating critique of the central tenets of Darwin s account of the origin of species The logic underlying natural selection is the survival of the fittest under changing environmental pressure This logic they argue is mistaken They back up the claim with evidence of what actually happens in nature This is a rare achievement the short book that is likely to make a great deal of difference to a very large subject What Darwin Got Wrong will be controversial The authors arguments will reverberate through the scientific world At the very least they will transform the debate about evolution

The Environmental Uncanny Brian A. Irwin,2024-06-27 The Environmental Uncanny argues that the increasing destitution of our world is the result of a certain forgetfulness we have forgotten that the basis of our knowledge is not calculative reason but our participation in the natural world The modern built environment is exemplary of this forgetfulness and induces an uncanniness that can help us to understand the nature of our environmental crisis This book offers a unique interdisciplinary perspective on the global environmental crisis Ranging from traditional phenomenology including substantial discussion of both Merleau Ponty and Heidegger to philosophy of biology to architectural and urban design theory to landscape photography it makes illuminating connections to paint a multifaceted picture Tracing the root causes of dwindling biodiversity deforestation and suburban sprawl we can find how might we mark the path back toward a mode of rich inhabitation in a contemporary age In charting out how it is that we are losing our world Irwin offers a thought as to how we might regain it

*The Oxford Handbook of History and Material Culture* Ivan Gaskell,Sarah Anne Carter,2020-04-07 Most historians rely principally on written sources Yet there are other traces of the past available to historians the material things that people have chosen made and used This book examines how material culture can enhance historians understanding of the past both worldwide and across time The successful use of material culture in history depends on treating material things of many kinds not as illustrations but as primary evidence Each kind of material thing and there are many requires the application of interpretive skills appropriate to it These skills overlap with those acquired by scholars in disciplines that may abut history but are often relatively unfamiliar to historians including anthropology archaeology and art history Creative historians can adapt and apply the same skills they honed while studying more traditional text based documents even as they borrow methods from these fields They can think through familiar historical problems in new ways They can also deploy material culture to discover the pasts of constituencies who have left few or no traces in written records The authors of this volume contribute case studies arranged thematically in six sections that respectively address the relationship of history and material culture to cognition technology the symbolic social distinction and memory They range across time and space from Paleolithic to Punk

*George C. Williams and Evolutionary Literacy* Michael P. Cohen, 2022-09-28 In this book a case study of a humanistic reading of an essential evolutionary theorist George C Williams May 12 1926 September 8 2010 the author contends that certain classic works of evolutionary theory and history are the most important nature writing of recent times What it means to be scientifically literate is essential for humanistic scholars who must ground themselves with literary reading of scientific texts As the most influential American evolutionary theorist of the second half of the twentieth century Williams masters critique frames questions about adaptation and natural selection and answers in a plain aphoristic writing style Williams aims for parsimony to recognize adaptation at the level necessitated by the facts and no higher through a minimalist writing style This voice articulates a powerful process that operates at very low levels by blind and selfish chance at the expense of its designed products using purely trial and error     **Queer Environmentality** Robert Azzarello, 2016-04-15 Offering a

model for meaningful dialogue between queer studies and environmental studies Robert Azzarello's book traces a queer environmental lineage in American Romantic and post Romantic literature Azzarello challenges the notion that reading environmental literature is unsatisfying in terms of aesthetics and proposes an understanding of literary environmentalism that is rich in poetic complexity With the term queer environmentality Azzarello points towards a queer sensibility in the history of environmental literature to balance the dominant narrative that reading environmental literature is tantamount to witnessing a spectacular dramatization of heterosexual teleology Azzarello's study treats four key figures in the American literary tradition Henry David Thoreau Herman Melville Willa Cather and Djuna Barnes Each of these writers problematizes conventional notions of the strange matrix between the human the natural and the sexual They brilliantly demonstrate the ways in which the queer project and the environmental project are always connected or put another way show that questions and politics of human sexuality are always entwined with those associated with the other than human world     **The Origins**
