Rearrangements Of Series In Banach Spaces Translations Of Mathematical Monographs Vol 86:

Mathematical Scattering Theory D. R. Yafaev, 1992-09-09 Preliminary facts Basic concepts of scattering theory Further properties of the WO Scattering for relatively smooth perturbations The general setup in stationary scattering theory Scattering for perturbations of trace class type Properties of the scattering matrix SM The spectral shift function SSF and the trace formula *Tensor Spaces and Exterior Algebra* Takeo Yokonuma, 1992 This book explains as clearly as possible tensors and such related topics as tensor products of vector spaces tensor algebras and exterior algebras You will appreciate Yokonuma's lucid and methodical treatment of the subject This book is useful in undergraduate and graduate courses in multilinear algebra *Tensor Spaces and Exterior Algebra* begins with basic notions associated with tensors to facilitate understanding of the definitions Yokonuma often presents two or more different ways of describing one object Next the properties and applications of tensors are developed including the classical definition of tensors and the description of relative tensors Also discussed are the algebraic foundations of tensor calculus and applications of exterior algebra to determinants and to geometry This book closes with an examination of algebraic systems with bilinear multiplication in particular Yokonuma discusses the theory of replicas of Chevalley and several properties of Lie algebras deduced from them

Arithmetic of Probability Distributions, and Characterization Problems on Abelian Groups Gennadii Mikhaïlovich Fel'dman, 1993 This book studies the problem of the decomposition of a given random variable into a sum of independent random variables components Starting from the famous Cramer theorem which says that all components of a normal random variable are also normal random variables the central feature of the book is Feldman's use of powerful analytical techniques In the algebraic case one cannot directly use analytic methods because of the absence of a natural analytic structure on the dual group which is the domain of characteristic functions Nevertheless the methods developed in this book allow one to apply analytic techniques in the algebraic setting The first part of the book presents results on the arithmetic of probability distributions of random variables with values in a locally compact abelian group The second part studies problems of characterization of a Gaussian distribution of a locally compact abelian group by the independence or identical distribution of its linear statistics **Notices of the American Mathematical Society** American Mathematical Society, 1991

Typical Singularities of Differential 1-forms and Pfaffian Equations Mikhail Zhitomirskii, 1992 Singularities and the classification of 1 forms and Pfaffian equations are interesting not only as classical problems but also because of their applications in contact geometry partial differential equations control theory nonholonomic dynamics and variational problems In addition to collecting results on the geometry of singularities and classification of differential forms and Pfaffian equations this monograph discusses applications and closely related classification problems Zhitomirskii presents proofs with all results and ends each chapter with a summary of the main results a tabulation of the singularities and a list of the normal forms The main results of the book are also collected together in the introduction Selected

Problems in Real Analysis M. G. Goluzina, A. A. Lodkin, A. N. Podkorytov, This book is intended for students wishing to deepen their knowledge of mathematical analysis and for those teaching courses in this area It differs from other problem books in the greater difficulty of the problems some of which are well known theorems in analysis Nonetheless no special preparation is required to solve the majority of the problems Brief but detailed solutions to most of the problems are given in the second part of the book This book is unique in that the authors have aimed to systematize a range of problems that are found in sources that are almost inaccessible especially to students and in mathematical folklore

Conformal Mappings and Boundary Value Problems Guo-Chun Wen, Translated from the Chinese Conformal mapping and boundary value problems are two major branches of complex function theory The former is the geometric theory of analytic functions and the latter is the analysis theory governing the close relationship between abstract theory and many concrete problems Topics include applications of Cauchy type integrals the Hilbert boundary value problem quasiconformal mappings and basic boundary value problems for harmonic functions Annotation copyright by Book News Inc Portland OR

Subgroups of Teichmüller Modular Groups Nikolai V. Ivanov, 1992-12-28 Teichmüller modular groups also known as mapping class groups of surfaces serve as a meeting ground for several branches of mathematics including low dimensional topology the theory of Teichmüller spaces group theory and more recently mathematical physics The present work focuses mainly on the group theoretic properties of these groups and their subgroups The technical tools come from Thurston's theory of surfaces his classification of surface diffeomorphisms and the theory of measured foliations on surfaces The guiding principle of this investigation is a deep analogy between modular groups and linear groups For some of the central results of the theory of linear groups such as the theorems of Platonov Tits and Margulis Soifer the author provides analogous results for the case of subgroups of modular groups The results also include a clear geometric picture of subgroups of modular groups and their action on Thurston's boundary of Teichmüller spaces Aimed at research mathematicians and graduate students this book is suitable as supplementary material in advanced graduate courses

Nonlinear Semigroups Isao Miyadera, This book presents a systematic exposition of the general theory of nonlinear contraction semigroups in Banach spaces and is aimed at students and researchers in science and engineering as well as in mathematics Suitable for use as a textbook in graduate courses and seminars this self contained book is accessible to those with only a basic knowledge of functional analysis After prerequisites presented in the first chapter Miyadera covers the basic properties of dissipative operators and nonlinear contraction semigroups in Banach spaces The generation of nonlinear contraction semigroups the Komura theorem and the Crandall Liggett theorem are explored and there is a treatment of the convergence of difference approximation of Cauchy problems for dissipative operators and the Kobayashi generation theorem of nonlinear semigroups Nonlinear Semigroups concludes with applications to nonlinear evolution equations and to first order quasilinear equations

Tube Domains and the Cauchy Problem Semen Grigor'evich Gindikin, This book is dedicated to two problems The first concerns the description

of maximal exponential growth of functions or distributions for which the Cauchy problem is well posed The descriptions presented in the language of the behaviour of the symbol in a complex domain The second problem concerns the structure of and explicit formulas for differential operators with large automorphism groups It is suitable as an advanced graduate text in courses in partial differential equations and the theory of distributions
