Reason In Science:

Science's War On Reason Mike Hockney, 2016-01-02 People can't reason. They don't even know what reason is. Reason is almost always harnessed to something that has nothing to do with reason. Believers in mainstream religion are feeling types who reason with their emotions or with their mystical intuitions. Scientists are sensing types. They subordinate their reason to their senses. All scientists are empiricists and are opposed to rationalism, i.e. the existence of a rational order of reality completely removed from the human senses which can only be apprehended rationally, logically, mathematically, and via intellectual intuition. Scientists try to don the cloak of rationalism even though they are explicitly opposed to mathematical rationalism which addresses a more fundamental noumenal reality than the one amenable to phenomenal science.

Science and Public Reason Sheila Jasanoff, 2012-07-26 This collection of essays by Sheila Jasanoff explores how democratic governments construct public reason that is the forms of evidence and argument used in making state decisions accountable to citizens. The term public reason as used here is not simply a matter of deploying principled arguments that respect the norms of democratic deliberation. Jasanoff investigates what states do in practice when they claim to be reasoning in the public interest. Reason from this perspective comprises the institutional practices, discourses, techniques, and instruments through which governments claim legitimacy in an era of potentially unbounded risks, physical, political, and moral. Those legitimating efforts in turn depend on citizens' acceptance of the forms of reasoning that governments offer. Included here therefore is an inquiry into the conditions that lead citizens of democratic societies to accept policy justification as being reasonable. These modes of public knowing or civic epistemologies are integral to the constitution of contemporary political cultures. Methodologically, the book is grounded in the field of Science and Technology Studies (STS). It uses in-depth qualitative studies of legal and political practices to shed light on divergent cross-cultural constructions of public reason and the reasoning political subject. The collection as a whole contributes to democratic theory, legal studies, comparative politics, geography, and ethnographies of modernity as well as STS.

The Future of Reason, Science and Faith J. Andrew Kirk, 2016-12-05 Focusing on the history of ideas, this book explores important questions concerning knowledge in relation to philosophy, science, ethics, and Christian faith. Kirk contributes to the current debate about the intellectual basis and integrity of Western culture, exploring controversial issues concerning the notions of modernity and post-modernity. Repositioning the Christian faith as a valid dialogue partner with contemporary secular movements in philosophy and ethics, Kirk seeks to show that in post-Christian Europe, the Christian faith still possesses intellectual resources worthy to be reckoned with. This book's principal argument is that contemporary Western society faces a cultural crisis. It explores what appears to be an historical enigma, namely the question of why Western intellectual endeavours in philosophy and science seem to have abandoned the search for a source of knowledge able to draw together disparate pieces of information provided by different disciplines. Kirk draws conclusions particularly in the area of ethical decision-making.

from this apparent failure and invites readers to consider Christian theism afresh as a means for the renewal of culture and society

Reason and the Search for Knowledge D. Shapere, 2012-12-06 An impressive characteristic of Dudley Shapere's studies in the philosophy of the sciences has been his dogged reasonableness. He sorts things out with logical care and mastery of the materials and with an epistemological curiosity for the historical happenings which is both critical and respectful. Science changes and the philosopher had better not link philosophical standards too tightly to either the latest orthodox or the provocative upstart in scientific fashions and yet as critic the philosopher must not only master the sciences but also explicate their meanings not those of a cognitive never-never land. Neither dreamer nor pedant, Professor Shapere has been able to practice the modern empiricist's exercises with the sober and stimulating results shown in this volume. He sees that he can be faithful to philosophical analysis, engage in the boldest rational reconstruction of theories and experimental measurements and faithful too empirically. Faithful we may say to both the direct superhighways and the winding pathways of conceptual evolutions and metaphysical revolutions. Not least, Shapere listens. To Einstein and Galileo of course but to the workings of the engineers and the scientific apprentices too and to the various philosophers now and of old who have also worked to make sense of what has been learned and how that has happened and where we might go wrong.

Reason, Science and Faith Paul Marston, Roger Forster, 2001-06-11

Science, Reason, and Faith Fr. Robert Spitzer, SJ, 2023-09-18 Built into our very nature is a desire to know about the world around us. The big questions of human existence are inescapable: Who am I? Why am I here and where am I going? Why is there evil in the world? What is the meaning of life? This yearning for truth ultimately leads us to our Creator. God knows the longings of the human heart and he reveals himself to us through creation, through Scripture and ultimately through the Incarnation. Because God the Son became man, we have a person to look to in our pursuit of truth. Jesus Christ himself who is Truth. Christ helps us see that truth is not just the object of science and reason but what animates the mysterious and loving power of faith. In *Science, Reason, and Faith* Fr. Robert Spitzer, SJ explores in depth the Bible and the intersection of three realms that the secular world tells us are separate and incompatible. Fr. Spitzer draws the modern reader's attention to the many seeming conflicts between science, reason and Catholic teaching. By tackling these difficult questions, he shows that it is precisely through the integration of science, reason and faith that we can truly discover ourselves, our world and our God.

Understanding Scientific Reasoning Ronald N. Giere, John Bickle, Robert F. Maudlin, 2006 *Understanding Scientific Reasoning* Fifth Edition develops critical reasoning skills and guides students in the improvement of their scientific and technological literacy. The authors teach students how to understand and critically evaluate the scientific information they encounter in both textbooks and the popular media. With its focus on scientific pedagogy, *Understanding Scientific Reasoning* helps students learn how to examine scientific reports with a reasonable degree of sophistication. The book also explains how to reason through case studies using the same informal logic skills employed by scientists and to analyse a complex series of propositions and hypotheses using sound scientific
