Handbook of Defeasible Reasoning and Uncertainty Management Systems Dov M. Gabbay, Philippe Smets, 2000-12-31

The Handbook of Defeasible Reasoning and Uncertainty Management Systems is unique in its masterly survey of the computational and algorithmic problems of systems of applied reasoning. The various theoretical and modelling aspects of defeasible reasoning were dealt with in the first four volumes and Volume 5 now turns to the algorithmic aspect. Topics covered include Computation in valuation algebras, consequence finding algorithms, possibilistic logic, probabilistic argumentation systems, networks and satisfiability algorithms for imprecise probabilities for Dempster Shafer and network based decisions.

Heuristic Reasoning about Uncertainty Paul R. Cohen, 1985 *Symbolic and Quantitative Approaches to Reasoning and Uncertainty* Michael Clarke, Rudolf Kruse, Serafin Moral, 2014-01-15 *Foundations of Reasoning Under Uncertainty* Bernadette Bouchon-Meunier, Luis Magdalena, Manuel Ojeda-Aciego, José-Luis Verdegay, Ronald R. Yager, 2010-01-15

This book draws on papers presented at the 2008 Conference on Information Processing and Management of Uncertainty IPMU held in Málaga, Spain. The conference brought together some of the world's leading experts in the study of uncertainty.

Quantified Representation of Uncertainty and Imprecision Dov M. Gabbay, Philippe Smets, 2013-11-11

We are happy to present the first volume of the Handbook of Defeasible Reasoning and Uncertainty Management Systems. Uncertainty pervades the real world and must therefore be addressed by every system that attempts to represent reality. The representation of uncertainty is a major concern of philosophers, logicians, artificial intelligence researchers and computer scientists, psychologists, statisticians, economists and engineers. The present Handbook volumes provide frontline coverage of this area. This Handbook was produced in the style of previous handbook series like the Handbook of Philosophical Logic, the Handbook of Logic in Computer Science, the Handbook of Logic in Artificial Intelligence and Logic Programming and can be seen as a companion to them in covering the wide applications of logic and reasoning. We hope it will answer the needs for adequate representations of uncertainty. This Handbook series grew out of the ESPRIT Basic Research Project DRUMS II where the acronym is made out of the Handbook series title. This project was financially supported by the European Union and regroups 20 major European research teams working in the general domain of uncertainty. As a fringe benefit of the DRUMS project, the research community was able to create this Handbook series, relying on the DRUMS participants as the core of the authors for the Handbook together with external international experts.

Subjective Logic Audun Jøsang, 2016-10-27

This is the first comprehensive treatment of subjective logic and all its operations. The author developed the approach and in this book he first explains subjective opinions, opinion representation and decision making under vagueness and uncertainty and he then offers a full definition of subjective logic, harmonising the key notations and formalisms, concluding with chapters on trust networks and subjective Bayesian networks which when combined form general subjective networks. The author shows how real world situations can be realistically modelled with regard to how situations are perceived with conclusions that more correctly reflect the ignorance and uncertainties that result from partially uncertain input arguments. The book will help researchers and practitioners to advance, improve and

apply subjective logic to build powerful artificial reasoning models and tools for solving real world problems A good grounding in discrete mathematics is a prerequisite
