Recent Progress In Hormone Research Volume 32:

Recent Progress in Hormone Research Gregory Pincus, 2013-10-22 Recent Progress in Hormone Research Volume IV is a collection of papers delivered at the 1948 Laurentian Hormone Conference held at Franconia New Hampshire This volume is composed of four parts encompassing 16 chapters that cover experimental works on the role of hormones in metabolism and the thyroid physiology and function The opening part deals with some aspects of steroid hormone metabolism including progesterone estrogen and androgen This part emphasizes the clinical aspects of physiology and function of ovarian hormones The subsequent part is devoted to the role of hormones in tissue and body metabolism This part particularly describes the antihormone problem in endocrine therapy and the alterations in metabolism incident to administration of insulin adrenalin and thyroid substances The metabolic changes under adrenal and pituitary hormone administration are also examined These topics are followed by discussions on the neurohumoral hypothalamic relationships specifically the adrenal function in mental disease and effects of hypothalamic lesions on water and energy metabolism The final part covers the conditions influencing the production and release of thyroid stimulating hormone by the anterior pituitary the primary actions of the hormone on its target gland a possible mode of action and the factors that influence this hormone's action on the thyroid This book will prove useful to endocrinologists *Recent Progress in Hormone Research* James H.

Clark, 2013-10-22 Recent Progress in Hormone Research Volume 46 provides a superior summary of the developments in the field of hormone research The book discusses the molecular basis of androgen insensitivity the tissue specific expression of the growth hormone gene and its control by growth hormone factor 1 and the molecular characterization of mammalian tachykinin receptors and a possible epithelial potassium channel The text also describes the properties of the guanylate cyclase receptor family insulin like growth factor binding proteins and growth hormone receptor and binding protein Mutations in the insulin receptor gene in genetic forms of insulin resistance the characteristics of the cAMP response unit and the role and secretion of inhibin in the rat are also considered The book further tackles the structure of the lutropin choriogonadotropin receptor and the gene for multiple endocrine neoplasia type 2a Endocrinologists physiologists and biochemists will find the text invaluable Recent Progress in Hormone Research C. Wayne Bardin, 2014-05-10 Recent

Progress in Hormone Research Volume 48 provides information pertinent to endocrine research dealing with all aspects of biological organization This book covers a variety of topics including differentiation of the embryo development and growth at puberty maintenance of adult well being and aging Organized into 29 chapters this volume begins with an overview of the role of oncogenes in fetal development This text then compares the molecular descriptions of the genes for growth hormone and prolactin receptors to receptors for a variety of other hormones peptide and growth factors Other chapters consider the three dimensional structure of the growth hormone receptor This book discusses as well the conventional and nonconventional uses of human growth hormone with emphasis on the wide availability of protein that is possible only

through molecular biology The final chapter deals with the effect of hormones on primate behavior This book is a valuable resource for geneticists and biologists

The Year in Endocrinology 1977 S. Ingbar, 2012-12-06 This has been a year of substantial change for The Year in Endocrinology The first change though perhaps only a semantic one nevertheless represents a landmark Although last year's volume was designated as the first of an annual series that seemed to me at the time merely a hope a realistic hope perhaps but a hope nevertheless With the publication of this year's volume however this can accurately be said to be an annual series one that we trust will fulfill a need and will therefore continue for years to come Among other changes from last year's volume are some that were originally intended and others that were unintended In the former category is the substitution of a chapter on water metabolism and vaso pressin excellently prepared by Dr Gary L Robertson for the chapter on paraendocrine syndromes that appeared last year Chapters on these two topics will continue to appear on alternate years Obviously the non recurring chapter on a topic of special interest has also changed and this year's comprises a comprehensive review of autoimmune endocrine disease by Drs Jay Silverberg and Robert Volpe The unexpected change results from the inability of Dr Louis Avioli to continue as a member of the Editorial Board Most fortunately however we have persuaded Dr Charles R Kleeman to join the Board and to be responsible for the chapter on the parathyroid gland and mineral metabolism Dr Kleeman has been assisted on the preparation of this chapter by his daughter Dr

Contemporary Topics in Molecular Immunology R. A. Reisfeld, 2013-12-01 New information is developing so rapidly in the entire field of immunology that one is unable to remain abreast of all advancing fronts In many cases considerable information has accumulated as the result of the efforts of many investigators but the conclusions from the various laboratories have not been summarized recently in a comprehensible manner One such situation has to do with work on IgD An up to date report on this immunoglobulin was included in Volume 10 of this series but since that time there has been considerable progress in the determination of its structure and function In the present volume Leslie and Martin have reviewed the accomplishments of recent years and the problems remaining to be solved New information regarding the concentration of IgD in body fluids in normal and disease states is presented Studies of the ontogeny of surface IgD in animals are described and the findings imply that it may be important in the primary immune response The role of IgD on lymphocyte surfaces is thoroughly discussed especially in terms of stimulating or suppressive combinations of signals delivered to the lymphocyte by agents which bind or alter the surface receptors The authors conclude by proposing a model for plasma cell differentiation which accounts for the existence of triple Ig bearing cells many IgM IgD bearing cells and the low percentage of cells bearing a single isotype Sometimes the serum of an individual contains abnormally large amounts of two distinct homogeneous populations of immunoglobulins

Structure and Function of the Gonadotropins Kenneth W. McKerns, 2012-12-06 In September of 1977 scientists from many countries met at the Asticou Inn in Maine to present and discuss papers written especially for this monograph The presentations were informal and directed to the special interests of

the audience in order to generate discussions The authors many of whom are pioneers and leaders in their field then had the opportunity to revise their contributions which were brought together with the edited discussions to form this volume The basic research studies presented here are important because of the essential role of gonadotropins in regulating the ovary and testis This monograph will therefore be of interest to those concerned with fertility regulation population control possible new methods for contraception and to those concerned with reproduction in domestic animals Researchers in other fields may find this monograph useful as it has been determined that gonadotropins are secreted by many tumors and are implicated in many cancers Human choriogonadotropin also seems to be found in most if not all cells of the human body The significance of this however is unknown
