Burk, C.L. Drake, 2013-12-20

The continental margins of the world constitute the most impressive and largest physiographic feature of the earth's surface and one of fundamental great geological significance. Continental margins have been the subject of increasing attention in recent years, an interest focused by a body of new data that has provided new insights into their character. This interest was further stimulated by the realization that in addition to the abundant living resources, continental margins contain petroleum and mineral resources that are accessible with existing technology. This realization along with their basic geological importance has provoked further research into the nature of continental margins throughout the world. A summary of these findings as related to both recent and ancient continental margins is the subject of this book. At various times in the past we had been approached individually to prepare a basic reference to continental margins; we then proposed to do such a volume jointly. However, the stimulus for the present volume eventually arose from a Penrose Conference arranged through the Geological Society of America. This conference was attended by specialists of numerous disciplines and from throughout the world, many of whom insisted that such a volume would be both timely and useful. Consequently, we agreed to undertake the task of assembling this book with the objectives of making it available as soon and as inexpensively as possible.

The Proceedings Of The Coastal Sediments 2015 Jun Cheng, Julie D Rosati, Ping Wang, 2015-04-23. This Proceedings contains over 260 papers on cutting edge research presented at the eighth international Symposium on Coastal Sediment Processes held May 11-15, 2015 in San Diego, California, USA. This technical specialty conference was devoted to promoting an interdisciplinary exchange of state-of-the-art knowledge among researchers in the fields of coastal engineering, geology, oceanography, and related disciplines with the theme of "Understanding and Working with Nature: Focusing on the physical aspects of the sediment processes in various coastal environments." This Proceedings provides findings from the latest research and newest engineering applications. Sessions covered a wide range of topics including barrier islands, beaches, climate and sea level, cohesive and noncohesive sediments, coastal bluffs, coastal marsh, dredged sediments, inlet and navigation channels, regional sediment management, river deltas, shore protection, tsunamis, and vegetation-sediment interaction. Several special sessions included "Relevant science for changing coastlines," "A Tribute to Gary Griggs," "North Atlantic Coast Comprehensive Study," and "Post-Super Storm Sandy work."
