Summary

Raja M, Azzoni A, Lubich L. Religious delusion. Schweiz Arch Neurol Psychiatr 2000;151:22-9.

Objective: Little is known about the clinical features associated with religious delusion and how religious delusion may differ across various diagnostic groups. The empirical research on this topic is relatively scanty. The primary purpose of this study was to detect the demographic, sociocultural, and clinical features of patients with religious delusion.

Method: We studied 313 patients consecutively admitted to an emergency psychiatric ward and compared patients with and without religious delusion.

Results: Patients with religious delusion were older, had started their first neuroleptic treatment earlier, had suffered less acute psycho-social stressors, and had presented a worse global functioning during the last year than patients without religious delusion. Furthermore, they received higher SAPS, BPRS total and BPRS psychotic cluster scores and were treated with a higher mean number of different neuroleptics during current hospitalisation. Religious delusion was not related to any diagnostic group.

Conclusions: Our results suggest an alternative outlook on delusions that de-emphasises the importance of diagnosis and looks instead at delusions and other major symptom areas as psychopathological dimensions.

Keywords: emergency psychiatry; delusion; religious delusion; religion and psychology

Introduction

Delusions are common and main symptoms in many neuropsychiatric disorders. Nevertheless, as Spitzer [1] notes, their nature is poorly understood, their aetiology is unknown, and their nosological status remains problematic. Furthermore, despite the frequency and the importance of delusions, a relatively small amount of research has been conducted in this field [2]. Questions about how delusions may differ across diagnostic groups are still unanswered.

Some forms of delusion are considered to be characteristic of schizophrenia or bipolar disorder, however, no delusional content is specific of these illnesses. Traditionally, religious delusion, with or without hallucinations, has been associated with schizophrenia, affective psychoses, complex partial seizure disorder and drug-induced psychoses. Recent reports have associated religious delusion with epileptic postictal psychosis [3], psychoses characterised by self-inflicted injuries [4-6], psychoses induced by general medical illnesses [7, 8], and mystical-religious fervor [9].

Although religious delusion has regularly been reported throughout the history of neuropsychiatry, surprisingly, there is no systematic study of religious delusion in unselected populations of psychiatric patients. We conducted computerised searches of MEDLINE back to 1966, but we did not find empirical studies on this subject.

As our hospital is situated at the centre of Rome, near St. Peter's Basilica, we have the opportunity to visit an unusually large number of patients with religious delusion. Many of these patients are referred to our centre because they display bizarre, shameful, or dangerous behaviour associated with their psychotic symptoms nearby the Basilica. Visitors to St. Peter's Basilica or to the Vatican displaying an abnormal behaviour are interviewed by town police officers and then referred to our hospital if they are considered mentally ill. This prompted us to undertake the present study to detect the demographic, sociocultural, and clinical features of patients with religious delusion

Häfner, 1982-05-20 Originally published in German in 1973 and first published in English as this Cambridge edition in 1982 this is a detailed and systematic account of the extent to which mentally abnormal offenders are likely to commit crimes of major violence based

upon a study of all the 533 men and women in the Federal German Republic from 1955 to 1964 who were detained in hospitals after committing homicide or near homicide The authors calculated that such patients are no more but also no less dangerous than the rest of the population and that the policy of treating psychotic or seriously subnormal patients in the community does not expose the public to risk The book makes important suggestions for the prevention of such disasters by describing the diagnoses special symptoms and social situations which involve a special risk especially to close relatives and those with whom the patient is emotionally involved

Is Faith Delusion? Andrew Sims, 2009-03-09 Is faith delusion Is religion bad for your health How in a scientifically and technologically advanced age can people still believe in God spirit other Clearly not all believers are primitive and ill educated an alternative explanation is that they must be mad or at least severely neurotic as suggested by Freud This book starts by looking at and giving reasons for the connection and the division between Christian faith and psychiatry It asks whether science challenges Christians involved with psychiatry as patients or professionals and whether the spiritual needs of patients are recognised The author examines the scope and use of the neuro sciences and considers cause and effect natural selection and determinism He explores the overlap and the difference between psychiatric symptoms and religious belief the possible association between demon possession and mental illness and the idea that some people are intrinsically religious and some are not The variations of personality are examined with their implications for belief Posited as a statement that faith is delusion is always hostile but outcome studies reviewed here show that in general religious belief and practice convey good mental health Religious faith and mental illness are different and their concepts

come from different world views A consideration of them in relation to each other is long overdue The author is a former Professor of Psychiatry and President of the Royal College of Psychiatrists and has also been Chairman of their Spirituality and Psychiatry Special Interest Group so is exceptionally well qualified to address the subject Although the book is technically proficient it is aimed at the general reader and is illustrated with stories brief case histories and anecdotes

Behavior Modification in Black Populations Samuel M. Turner, 2012-12-06 During the past decade research and practice in the field of behavior modification have experienced phenomenal growth Behavioral intervention strategies that were considered strictly experimental a few years ago are now accepted therapeutic modalities and behavioral methodology has been instrumental in creating an atmosphere conducive to the development of scientific rigor in the area of mental health But behavioral influence has not been limited to mental health There has been considerable impact in education industry government and general health care Although behavior modification has made a significant impact on psychology in general there has been a noticeable lack of theorizing and empirical research on issues primarily related to black populations In fact the black community in general and black psychologists in particular often have viewed behavioral approaches with suspicion We hope that the material presented in this volume will serve to clarify what the behavioral approach is and what it is not and that it will help to foster an understanding of the behavioral approach Moreover empirical data demonstrating the effectiveness of behavioral procedures with black populations are presented It is our hope that the material will provide some insight into how behavioral theory methodology and therapeutic strategies can be used to the benefit of black mental health in particular and the overall psychological health of the black community in general The Chicago Medical Journal and Examiner, 1887 **The Chicago Medical Journal**, 1887 **Introductory Textbook of Psychiatry** Donald W.
