

The illustration depicts a young boy with blonde hair, wearing a yellow t-shirt and blue trousers, walking a light brown dog on a leash. They are positioned under a large, gnarled tree with vibrant autumn foliage in shades of orange, yellow, and red. The boy is looking back over his shoulder at the dog. The ground is covered with fallen leaves. The entire scene is rendered in a classic children's book illustration style with visible pencil or crayon textures.

Remarkable Ramsey, the Talking Dog Barbara Rinkoff, 1972 *The Mathematics of Paul Erdős I* Ronald Lewis Graham, Jaroslav Nesetril, 2012-12-06 In 1992 when Paul Erdos was awarded a Doctor Honoris Causa by Charles University in Prague a small conference was held bringing together a distinguished group of researchers with interests spanning a variety of fields related to Erdos own work At that gathering the idea occurred to several of us that it might be quite appropriate at this point in Erdos career to solicit a collection of articles illustrating various aspects of Erdos mathematical life and work The response to our solicitation was immediate and overwhelming and these volumes are the result Regarding the organization we found it convenient to arrange the papers into six chapters each mirroring Erdos holistic approach to mathematics Our goal was not merely a random collection of papers but rather a thoroughly edited volume composed in large part by articles explicitly solicited to illustrate interesting aspects of Erdos and his life and work Each chapter includes an introduction which often presents a sample of related Erdos problems in his own words All these sometimes lengthy introductions were written jointly by editors We wish to thank the nearly 70 contributors for their outstanding efforts and their patience In particular we are grateful to Bela Bollobas for his extensive documentation of Paul Erdos early years and mathematical high points in the first part of this volume our other authors are acknowledged in their respective chapters We also want to thank A Bondy G Hahn I **Ramsey's Legacy** Hallvard Lillehammer, D. Sequences and Series in Banach Spaces J. Diestel,2012-12-06 This volume presents answers to some natural questions of a general analytic character that arise in the theory of Banach spaces I believe that altogether too many of the results presented herein are unknown to the active abstract analysts and this is not as it should be

Banach space theory has much to offer the practitioners of analysis unfortunately some of the general principles that motivate the theory and make accessible many of its stunning achievements are couched in the technical jargon of the area thereby making it unapproachable to one unwilling to spend considerable time and effort in deciphering the jargon With this in mind I have concentrated on presenting what I believe are basic phenomena in Banach spaces that any analyst can appreciate enjoy and perhaps even use The topics covered have at least one serious omission the beautiful and powerful theory of type and cotype To be quite frank I could not say what I wanted to say about this subject without increasing the length of the text by at least 75 percent Even then the words would not have done as much good as the advice to seek out the rich Seminaire Maurey Schwartz lecture notes wherein the theory's development can be traced from its conception Again the treasured volumes of Lindenstrauss and Tzafriri also present much of the theory of type and cotype and are must reading for those really interested in Banach space theory

The Development of Modern Logic Leila Haaparanta, 2009-06-18 This edited volume presents a comprehensive history of modern logic from the Middle Ages through the end of the twentieth century In addition to a history of symbolic logic the contributors also examine developments in the philosophy of logic and philosophical logic in modern times The book begins with chapters on late medieval developments and logic and philosophy of logic from Humanism to Kant The following chapters focus on the emergence of symbolic logic with special emphasis on the relations between logic and mathematics on the one hand and on logic and philosophy on the other This discussion is completed by a chapter on the themes of judgment and inference from 1837-1936 The volume contains a section on the development of mathematical logic from 1900-1935 followed by a section on main trends in mathematical logic after the 1930s The volume goes on to discuss modal logic from Kant till the late twentieth century and logic and semantics in the twentieth century the philosophy of alternative logics the philosophical aspects of inductive logic the relations between logic and linguistics in the twentieth century the relationship between logic and artificial intelligence and ends with a presentation of the main schools of Indian logic The Development of Modern Logic includes many prominent philosophers from around the world who work in the philosophy and history of mathematics and logic who not only survey developments in a given period or area but also seek to make new contributions to contemporary research in the field It is the first volume to discuss the field with this breadth of coverage and depth and will appeal to scholars and students of logic and its philosophy

Discrete Geometry Jiri Matousek, 2013-12-01 Discrete geometry investigates combinatorial properties of configurations of geometric objects. To a working mathematician or computer scientist it offers sophisticated results and techniques of great diversity and it is a foundation for fields such as computational geometry or combinatorial optimization. This book is primarily a textbook introduction to various areas of discrete geometry. In each area it explains several key results and methods in an accessible and concrete manner. It also contains more advanced material in separate sections and thus it can serve as a collection of surveys in several narrower subfields. The main topics include basics on convex sets, convex polytopes and hyperplane arrangements, combinatorial complexity of geometric configurations, intersection patterns and transversals of convex sets, geometric Ramsey type results, polyhedral combinatorics and high dimensional convexity and lastly embeddings of finite metric spaces into normed spaces. Jiri Matousek is Professor of Computer Science at Charles University in Prague. His research has contributed to several of the considered areas and to their algorithmic applications. This is his third book.

The Mathematical Coloring Book Alexander Soifer, 2008-10-13 This is a unique type of book at least I have never encountered a book of this kind. The best description of it I can give is that it is a mystery novel developing on three levels and imbued with both educational and philosophical moral issues. If this summary description does not help understanding the particular character and allure of the book, possibly a more detailed explanation will be found useful. One of the primary goals of the author is to interest readers in particular young mathematicians or possibly pre-mathematicians in the fascinating world of elegant and easily understandable problems for which no particular mathematical knowledge is necessary but which are very far from being easily solved. In fact the prototype of such problems is the following: If each point of the plane is to be given a color, how many colors do we need if every two points at unit distance are to receive distinct colors? More than half a century ago it was established that the least number of colors needed for such a coloring is either 4 or 5 or 6 or 7. Well, which is it? Despite efforts by a legion of very bright people, many of whom developed whole branches of mathematics and solved problems that seemed much harder, not a single advance towards the answer has been made. This mystery and scores of other similarly simple questions form one level of mysteries explored. In doing this, the author presents a whole lot of attractive results in an engaging way and with increasing level of depth.
