

INDICATIONS FOR RENAL BIOPSY

- **Unexplained Chronic Kidney Disease**
- Renal biopsy can be informative in the patient with unexplained CKD and normal-sized kidneys .
- Studies shown that in these patients with CKD, the biopsy will demonstrate disease that was not predicted in almost half.
- However, if both kidneys are small (<9 cm on ultrasound), the risks of biopsy are increased, and the diagnostic information limited by extensive glomerulosclerosis and tubulointerstitial fibrosis.
- However, immunofluorescence studies may still be informative :
For example, glomerular IgA deposition may be identified despite advanced structural damage.
