Rendezvous with the Sensuous John Murungi, 2014-03-17 In Rendezvous with the Sensuous readers are drawn to and become situated within the dynamic place of the aesthetic experience While there human sensuousness comes into relief as it combines with the sensuousness that derives from nature In this complex place where artistic expression coalesces with the natural world readers are extended an invitation to share in the journey of a richly diverse synesthetic experience and to gain a greater appreciation of the important place of the sensuous in illuminating the role of aesthetics in the world of ideas

Understanding Alain Robbe-Grillet Roch C. Smith, 2000 Transforming bewilderment into understanding and pleasure while preserving a sense of Robbe Grillet's considerable richness and complexity Smith elucidates the defining elements of the writer's fictional world characters that barely exist changeable narrators plots that defy logic notoriously meticulous descriptions that never quite form a complete story Smith examines Robbe Grillet's embrace of discontinuity circularity indeterminacy and linguistic play Smith also poses questions about how we should view this perplexing writer as an author of hyperobjective novels and short stories a subjective novelist a realist or a writer who undermines the narrative's claim to represent reality In addition Smith evaluates the sado erotic imagery of Robbe Grillet's middle and late novels as a metaphorical play with textual and social conventions

to use in different phases of RVD The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS radar and camera type RVD sensors It also provides guidance algorithms and schemes for different phases of RVD including the latest research advances in rapid RVD In turn the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD Emphasis is placed on the design method of active and passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole For purposes of verification the Shenzhou spacecraft's in orbit flight mission is introduced as well All issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD

An Assessment of the Technology of Automated Rendezvous and Capture in Space M. E. Polites, 1998

The Theory of Search Games and Rendezvous Steve Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the zero sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem

Flocking and Rendezvous in Distributed Robotics Bruce A. Francis, Manfredi Maggiore, 2015-10-24 This brief describes the coordinated control of groups of robots using only sensory input and no direct external commands Furthermore each robot employs the same local strategy i e there are no leaders and the text also deals with decentralized control allowing for cases in which no single robot can sense all the others One can get intuition for the problem from the natural world for example flocking birds How do they achieve and maintain their flying formation Recognizing their importance as the most basic coordination tasks

for mobile robot networks the brief details flocking and rendezvous They are shown to be physical illustrations of emergent behaviors with global consensus arising from local interactions The authors extend the consideration of these fundamental ideas to describe their operation in flying robots and prompt readers to pursue further research in the field Flocking and Rendezvous in Distributed Robotics will provide graduate students a firm grounding in the subject while also offering an authoritative reference work for more experienced workers seeking a brief but thorough treatment of an area that has rapidly gained in interest
