## **Santilli's Generalization Of Galileos And Einsteins Relativities:**

**Santilli's Lie-isotopic Generalization of Galilei's and Einstein's Relativities** A. K. Arigazin, A. Jannussis, M. Nishioka, 1992-06 **Cosmology, Quantum Vacuum and Zeta Functions** Sergey D. Odintsov, Diego Sáez-Gómez, Prof. Dr. S. Xambó-Descamps Universitat Politècnica de Catalunya, 2011-06-10 Some major developments of physics in the last three decades are addressed by highly qualified specialists in different specific fields They include renormalization problems in QFT vacuum energy fluctuations and the Casimir effect in different configurations and a wealth of applications A number of closely related issues are also considered The cosmological applications of these theories play a crucial role and are at the very heart of the book in particular the possibility to explain in a unified way the whole history of the evolution of the Universe from primordial inflation to the present day accelerated expansion Further a description of the mathematical background underlying many of the physical theories considered above is provided This includes the uses of zeta functions in physics as in the regularization problems in QFT already mentioned specifically in curved space time and in Casimir problems as *Frontiers of Fundamental Physics* M. Barone, F. Selleri, 2012-12-06 The Olympia conference Frontiers of Fundamental Physics was a gathering of about hundred scientists who carry on their research in conceptually important areas of physical science they do fundamental physics Most of them were physicists but also historians and philosophers of science were well represented An important fraction of the participants could be considered heretical because they disagreed with the validity of one or several fundamental assumptions of modern physics Common to all participants was an excellent scientific level coupled with a remarkable intellectual honesty we are proud to present to the readers this certainly unique book Alternative ways of considering fundamental matters should of course be vitally important for the progress of science unless one wanted to admit that physics at the end of the XXth century has already obtained the final truth a very unlikely possibility even if one accepted the doubtful idea of the existence of a final truth The merits of the Olympia conference should therefore not be judged a priori in a positive or in a negative way depending on one's refusal or acceptance respectively but considered after reading the actual of basic principles of contemporary science new proposals and evidences there presented They seem very important to us **Scientific Legacy Of Professor Zbigniew Oziewicz: Selected Papers From The International Conference "Applied Category Theory Graph-operad-logic"** Hilda Maria Colin Garcia, Jose De Jesus Cruz Guzman, Louis H Kauffman, Hanna Makaruk, 2023-09-27 Dedicated to the memory of the late Professor Zbigniew Oziewicz from Universidad Nacional Autónoma de México the book consists of papers on a wide variety of topics related to the work of Professor Oziewicz which were presented at the special conference on Graph Operads Logic GOL 2021 selected through peer review to promote his scientific legacy Professor Oziewicz was a great enthusiast and supporter of category theory and its applications in physics as well as in various areas of mathematics topology noncommutative geometry etc In particular he made significant contributions to the theory of Frobenius algebras which now are becoming more important due to their

connection with topological quantum field theories that are used in mathematical physics and in quantum topology Professor Oziewicz was a great and very generous teacher who immersed his students in the beautiful ideas of category theory as well as mathematical physics and computation It was his idea to start a series of conferences under the title Graphs Operads Logic most of them held in Mexico with some of them in the USA which were a great platform to discuss various ideas connected with category theory and its various applications and to make friends with other scientists Despite his passing the GOL 2021 conference is included in this series to pay tribute to his many contributions to diverse areas of science The book is laid out in twelve main topics where we can find relevant works from distinguished experts     *Advances In Algebra, Proceedings Of The Icm Satellite Conference In Algebra And Related Topics* Kar Ping Shum, Jiping Zhang, Zhe-xian Wan, 2003-07-07 This is the proceedings of the ICM2002 Satellite Conference on Algebras Over 175 participants attended the meeting The opening ceremony included an address by R Gonchidorazh former vice president of the Mongolian Republic in Ulaanbaatar The topics covered at the conference included general algebras semigroups groups rings hopf algebras modules codes languages automation theory graphs fuzzy algebras and applications     *Isodual Theory of Antimatter* Ruggero Maria Santilli, 2006-02-28 The scope of this monograph is to show that our classical quantum and cosmological knowledge of antimatter is at its beginning with much yet to be discovered and that a commitment to antimatter by experimentalists will be invaluable to antimatter science This is also the first book presenting the isodual theory of antimatter It is aimed at scientists and researchers in theoretical physics     **Large-scale Collective Motion Of Atomic Nuclei - Proceedings Of The International Symposium** Giorgio Giardina, Giovanni Fazio, Marcello Lattuada, 1997-07-01 The scope of the international meeting covered a broad range of the recent developments in nuclear physics from heavy ion collisions from Coulomb barrier through relativistic energies using stable and radioactive beams to some applications of nuclear physics and other research fields The lectures given at the meeting range from the most recent progress to future prospects in nuclear physics research This volume focuses on recent developments in nuclear physics with emphasis on the investigation of processes connected with large amplitude collective motion in nuclei such as heavy ion fusion giant multipole resonances and nuclear fission and fragmentation     **Instantaneous Action at a Distance in Modern Physics** Andrew E. Chubykalo, Pope, Viv, Roman Smirnov-Rueda, 1999 The so far unanswered question of whether the movements of distance separated objects are correlated in the way quantum physics requires or whether according to Einstein they can influence one another only by mechanical agencies travelling between them at speeds limited to that of light It is to that still unanswered question that this present compilation of papers is addressed The editorial approach is unusual in that in order to break the current conceptual deadlock and to encourage true innovation they have solicited inputs which are multidisciplinary This open ended venture is therefore perhaps more in line with what was once called Natural Philosophy than with what is currently known as Physics This is something of a departure for those who say that Physics no longer has anything to do with Philosophy For there are

physicists who believe that their predecessors have accomplished all the really important conceptual work on interpreting natural phenomena so that there is no longer any call for radical revision in that direction This leads to a constricted form of the discipline in which the purpose of all observation and experimentation is seen as simply to collect more and more information and fit it to conceptions which are traditionally cut and dried The emphasis is thus on presenting informed and carefully considered descriptions of natural phenomena economizing as far as possible on interpretations in terms of entities which turn out to be no more than speculative
