Saturn And Beyond:

Life in the Solar System and Beyond Barrie W. Jones, 2013-11-27 In *Life in the Solar System and Beyond* Professor Jones has written a broad introduction to the subject addressing important topics such as what is life the origins of life and where to look for extraterrestrial life The chapters are arranged as follows Chapter 1 is a broad introduction to the cosmos with an emphasis on where we might find life In Chapters 2 and 3 Professor Jones discusses life on Earth the one place we know to be inhabited Chapter 4 is a brief tour of the Solar system leading us in Chapters 5 and 6 to two promising potential habitats Mars and Europa In Chapter 7 the author discusses the fate of life in the Solar system which gives us extra reason to consider life further afield Chapter 8 focuses on the types of stars that might host habitable planets and where in the Galaxy these might be concentrated Chapters 9 and 10 describe the instruments and techniques being employed to discover planets around other stars exoplanetary systems and those that will be employed in the near future Chapter 11 summarizes the known exoplanetary systems together with an outline of the systems we expect to discover soon particularly habitable planets Chapter 12 describes how we will attempt to find life on these planets and the final chapter brings us to the search for extraterrestrial intelligence and the question as to whether we are alone

Weird Astronomical Theories of the Solar System and Beyond David Seargent, 2015-12-26 After addressing strange cosmological hypotheses in *Weird Universe* David Seargent tackles the no less bizarre theories closer to home Alternate views on the Solar System's formation comet composition and the evolution of life on Earth are only some of the topics he addresses in this new work Although these ideas exist on the fringe of mainstream astronomy they can still shed light on the origins of life and the evolution of the planets Continuing the author's series of books popularizing strange astronomy facts and knowledge *Weird Astronomical Theories* presents an approachable exploration of the still mysterious questions about the origin of comets the pattern of mass extinctions on Earth and more The alternative theories discussed here do not come from untrained amateurs The scientists whose work is covered includes the mid 20th century Russian S K Vsekhsvyatskii cosmologist Max Tegmark British astronomers Victor Clube and William Napier and American Tom Van Flandern a specialist in celestial mechanics who held a variety of unusual beliefs about the possibility of intelligent life having come from elsewhere Despite being outliers their work reveals how much astronomical understanding is still evolving Unconventional approaches have also pushed our scientific understanding for the better as with R W Mandl's approaching Einstein with regard to gravitational lensing Even without full substantiation and some theories are hardly credible their hypotheses allow for a new perspective on how the Solar System became what it is today
