**Setting Priorities for Drinking Water Contaminants** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Drinking Water Contaminants, 1999-01-02

The provision of safe drinking water has been an important factor in the improvement of the health status of U S communities since the turn of the last century Nonetheless outbreaks of waterborne disease and incidences of chemical contamination of drinking water continue to occur Setting Priorities for Drinking Water Contaminants recommends a new process for the U S Environmental Protection Agency to use in deciding which potential drinking water contaminants should be regulated in public water supplies to provide the greatest protection against waterborne illnesses The book covers chemical and microbiological contaminants and includes a historical review of past approaches to setting priorities for drinking water contaminants and other environmental pollutants It emphasizes the need for expert judgment in this process and for a conservative approach that considers public health protection as the first priority

*Classifying Drinking Water Contaminants for Regulatory Consideration* National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Water Science and Technology Board, Committee on Drinking Water Contaminants, 2001-09-01

Americans drink many gallons of tap water every day but many of them question the safety of tap water every day as well In fact devices have been created to filter tap water directly before reaching cups It s true however that the provision and management of safe drinking water throughout the United States have seen triumphs in public health since the beginning of the 20th century Although advances in water treatment source water protection efforts and the presence of local state and federal regulatory protection have developed over the years water in the United States still contain chemical microbiological and other types of contaminants at detectable and at times harmful levels This in addition to the growth of microbial pathogens that can resist traditional water treatment practices have led to the question Where and how should the U S government focus its attention and limited resources to ensure safe drinking water supplies for the future To deal with these issues the Safe Drinking Water Act SDWA Amendments of 1996 Safe included a request that the U S Environmental Protection Agency EPA publish a list of unregulated chemical and microbial contaminants and contaminant groups every five years that are or could pose risks in the drinking water of public water systems The first list called the Drinking Water Contaminant Candidate List CCL was published in March 1998 The main function of the CCL is to provide the basis for deciding whether to regulate at least five new contaminants from the CCL every five years However since additional research and monitoring need to be conducted for most of the contaminants on the 1998 CCL the list is also used to prioritize these related activities

*Classifying Drinking Water Contaminants for Regulatory Consideration* is the third report by the Committee on Dinking Water Contaminants with the purpose of providing advice regarding the setting of priorities among drinking water contaminants in order to identify those contaminants that pose the greatest threats to public health

The committee is comprised of 14 volunteer experts in water treatment engineering toxicology public health epidemiology water and analytical chemistry risk assessment risk communication public water system operations and microbiology and is jointly overseen by the National Research Council's NRC's Water Science and Technology Board and Board on Environmental Studies and Toxicology In this report the committee needed to readdress its second report as well as explore the feasibility of developing and using mechanisms for identifying emerging microbial pathogens for research and regulatory activities The promotion of public health remains the guiding principle of the committee's recommendations and conclusions in this report

**Comparative Risk Assessment and Environmental Decision Making** Igor Linkov, Abou Bakr Ramadan, 2006-03-02

Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions to our environmental challenges

National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, 1998 Workshop on Emerging Drinking Water Contaminants, 1999-08-30 With an increasing population use of new and diverse chemicals that can enter the water supply and emergence of new microbial pathogens the U S federal government is faced with a regulatory dilemma Where should it focus its attention and limited resources to ensure safe drinking water supplies for the future Identifying Future Drinking Water Contaminants is based on a 1998 workshop on emerging drinking water contaminants It includes a dozen papers that were presented on new and emerging microbiological and chemical drinking water contaminants associated analytical and water treatment methods for their detection and removal and existing and proposed environmental databases to assist in their proactive identification and regulation The papers are preceded by a conceptual approach and related recommendations to EPA for the periodic creation of future Drinking Water Contaminant Candidate Lists CCLs produced every five years include currently unregulated chemical and microbiological substances that are known or anticipated to occur in public water systems and that may pose health risks

**Refinements to the Methods for Developing Spacecraft Exposure Guidelines** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Spacecraft Exposure Guidelines, 2016-05-07 Human spaceflight is inherently risky with numerous potential hazards posed at each phase of a mission Potential health risks during spaceflights include short term health consequences from being in microgravity as

well as long term health consequences that arise or continue months or years after a flight Additional health considerations are risks posed by exposure to environmental contaminants onboard spacecraft Because the International Space Station and spacecraft are closed environments that require recirculation of air and water supplies some contamination of the air and water will occur Even with onboard air and water purification systems chemicals will accumulate in the air and water as they recirculate or are recycled onboard Therefore it is necessary for the National Aeronautics and Space Administration NASA to identify hazardous contaminants and determine exposure levels that are not expected to pose a health risk to astronauts NASA uses spacecraft maximum allowance concentrations SMACs and spacecraft water exposure guidelines SWEGs to provide guidance on acceptable exposures to air and water contaminants during normal operations and emergency situations Refinements to the Methods for Developing Spacecraft Exposure Guidelines updates the methods for establishing SMACs and SWEGs and assists NASA with identifying chemicals that need updated SMACs or SWEGs and new chemicals for which these guidelines should be developed
