Transporters Arturo Ortega,Arne Schousboe,2017-08-21 This ambitious compendium provides an extensive overview on the supporting cells of the vertebrate central nervous system these being glial cells which far outnumber neurons but are much less understood Covering multiple aspects of this family of transporters from structural properties to their involvement in signaling and gene expression regulation this volume presents the most recent research on the roles of glial amino acid transporters as key molecules of brain metabolism and signaling

Hot Topics in Cell Biology José Becerra,Leonor

Santos-Ruiz,2012 Summary This book is a definitive overview of the current state of the art in cell biology It is based on papers presented by leading researchers at the Spanish Society for Cell Biology s XIV Congress a Congress that strives to

achieve scientific excellence Each participant was asked to prepare a mini review of current and likely future development in their area of research This book is based on those reviews As such it is therefore an analysis of current and future trends Key Features Contains contributions from some of the world s leading researchers The book is multidisciplinary covering almost all topics in cell biology from basic to applied cell biology and a wide variety of models from in vitro to vivo models ranging from fish to rodents and humans Each mini review is an easy read piece describing the state of the art on a topic with clear language and in a summary format The mini review format makes the book attractive not only to readers involved in cell biology research and teaching but also professionals from other disciplines and students The book takes a truly multidisciplinary approach it covers a wide array of topics and the book reflects how cell biology interacts with other disciplines The Editors Jose Becerra is Professor of Cell Biology at the University of M laga Spain since 1989 He has been Dean Secretary Vice Dean and Dean of the Faculty of Sciences of M laga and is now the Head of the Department of Cell Biology Genetics and Physiology From 2001 to 2003 he was the Director of the Andalusian Laboratory of Biology LAB Seville which was converted in the Andalusian Centre for Developmental Biology CABD under his term He is a member of the Technical Committee of the National Stem Cell Bank since 2007 patron of the Board of Trustees of IMABIS Foundation Mediterranean Institute for the Advance of Biotechnology and Health Research coordinator of the Biomaterials and Tissue Engineering Area of the the Biomedical Research Networking Center in Bioengineering Biomaterials and Nanomedicine CIBER BBN and member of the Direction Committee of the CIBER BBN Leonor Santos Ruiz is Senior Researcher of the CIBER BBN network at the Andalusian Center for Nanomedicine and Biotechnology BIONAND She started her career studying the cellular and molecular basis of lower vertebrates amazing ability for tissue regeneration with a special attention to bone and spinal cord repair Readership Cell biology academics and researchers Contents Introduction Dynamics of cell compartments The intracellular trafficking Cell signaling Autophagy apoptosis and cell homeostasis Cell biology of aging Plant cell biology Methods in cell biology Applied cell biology Cell biology of cancer Cell therapies and tissue engineering Neurodegeneration and cell biology Nanotechnology and cell biology challenges and opportunities From Complex Analysis to Operator Theory: A Panorama Malcolm Brown,Fritz Gesztesy,Pavel Kurasov,Ari Laptev,Barry Simon,Gunter Stolz,Ian Wood,2023-09-21 This volume is dedicated to the memory of Sergey Naboko 1950 2020 In addition to original research contributions covering the vast areas of interest of Sergey Naboko it includes personal reminiscences and comments on the works and legacy of Sergey Naboko s scientific achievements Areas from complex analysis to operator theory especially spectral theory are covered and the papers will inspire current and future researchers in these areas Membrane Protein Protocols Barry S. Selinsky,2008-02-03 Knowledge of the three dimensional structure of a protein is absolutely required for the complete understanding of its function The spatial orientation of amino acids in the active site of an enzyme demonstrates how substrate specificity is defined and assists the medicinal chemist in the design of s cific tight

binding inhibitors The shape and contour of a protein surface hints at its interaction with other proteins and with its environment Structural analysis of multiprotein complexes helps to define the role and interaction of each individual component and can predict the consequences of protein mutation or conditions that promote dissociation and rearrangement of the complex Determining the three dimensional structure of a protein requires milligram quantities of pure material Such quantities are required to refine crystallization conditions for X ray analysis or to overcome the sensitivity limitations of NMR spectroscopy Historically structural determination of proteins was limited to those expressed naturally in large amounts or derived from a tissue or cell source inexpensive enough to warrant the use of large quantities of cells However with the advent of the techniques of modern gene expression many proteins that are constitutively expressed in minute amounts can become accessible to large scale purification and structural analysis

Neurological Functions of the Master Switch Protein

Kinase - GSK-3 Oksana Kaidanovich-Beilin, Jean-Martin Beaulieu, Richard S. Jope, Jim R. Woodgett, The functions of the brain that allow us to think feel move and perceive the world are the result of an exchange of information within a network composed of millions of specialized cells called neurons and glia Neurons use neurotransmitters and other extracellular messengers to communicate with each other and to constantly update and reorganize their network of connections in a process known as neural plasticity In order to respond to these extracellular signals neurons are equipped with specialized receptors that can recognize a single neurotransmitter a bit like a lock would recognize a key They do this by activating or inhibiting a class of specialized signaling proteins and second messengers Typically signaling proteins are themselves organized in networks or pathways in which they activate or inhibit each other in order to integrate the mass of information received by a single cell and to regulate the biological functions of this cell As we can see rather than simply being a network of neurons the brain can be seen as a sort of Russian doll in which each neuron is at the same time a part of networks with other neurons and the receptacle of many networks composed of signaling proteins Two individual genes encode two paralogous signaling proteins Glycogen Synthase Kinase 3 alpha and beta GSK 3a GSK 3b named for its ability to phosphorylate a key metabolic enzyme of glycogen synthesis glycogen synthase This unique glamour and gloom protein kinase has been intriguing many researchers for over 30 years by its unusual features still unknown mechanisms of its activation its regulation by multiple key intracellular pathways and its capacity to influence the functions of many substrates Since GSK 3 was discovered there has been significant progress in elucidating its regulatory roles in the neuron and the structure and functions of the brain Lithium has been used as a gold standard in the treatment of bipolar disorder for 60 years and GSK 3's renaissance in psychiatry began with the discovery of GSK 3 as lithium's intracellular target Since then GSK3 has been implicated in the pathogenesis of mood disorders schizophrenia Alzheimer's disease ADHD multiple sclerosis Fragile X syndrome and Huntington disease Connections to these and other diseases has led over the last 10 years to the generation of multiple types of GSK 3 inhibitors as promising therapeutic treatments for the aforementioned pathological

conditions During last couple years new genetic models have been generated including conventional and conditional mouse models allowing the discovery of new roles of GSK 3 in the mechanism of neurotransmitter action neurodevelopment learning and memory formation GSK 3 s gene effect on mouse behavior and other functions Thus GSK 3 has been well established as an intracellular second messenger for several neurotransmitter systems and as an important therapeutic target of mood stabilizers antipsychotics and psychomimetic drugs The proposed Specific Topic for Frontiers in Neuroscience will be focused on the latest advances from leading laboratories in this area subdivided into 5 topics 1 GSK 3 history mechanism of regulation substrate specificity and comparison between the brain function of two GSK 3 genes through new animal models and cell biology approaches 2 role of GSK 3 in neurodevelopment and neuronal structure 3 involvement of GSK 3 in synaptic functions learning and memory and in serotonin and dopamine pathways 4 role of GSK 3 in neuroinflammation and application to the pathogenesis of multiple sclerosis AD schizophrenia Fragile X brain tumors stroke and bipolar disorder 5 development of GSK 3 inhibitors and their application in psychiatry including special discussion about the mechanism of lithium action
