

Sanitary and Sewerage System in Tall Buildings

Lecture

By: Dr. Madiha Ahmad

Drainage System

A drainage system is an arrangement to move liquids away from where they are not required for disposal in appropriate locations.

Stormwater is rain that has reached the ground.

Runoff is water from rain that flows over land into waterways and pipes.

Wastewater includes liquid wastes but also sludges, odors and other residuals.

Wastewater travels in wastewater pipes (also called sewers) to water treatment centers.

Wastewater includes dissolved contaminants, suspended solids and microorganisms.

Storm

Scuppers are found on many commercial and residential flat roofs. Scupper drains are equally effective and important as other drain systems.

Interior Drains

Found on the roofs of large buildings. They use an interior system of pipes, are typically found below the roof, and carry water away from the home's foundation.
