Sex Differences in Heart Disease Bohuslav Ostadal, Naranjan S. Dhalla, 2020-11-15 Cardiovascular diseases are the leading cause of mortality in men and women Unfortunately women have traditionally been excluded from clinical trials and female animals have been used less or sex was not reported in basic research studies Until recently consideration of both sexes was not required in clinical and preclinical studies focusing on cardiovascular diseases However the number of clinical and experimental papers dealing with sex differences and heart disease significantly increases during the last years This trend is obviously the result of at least two facts the number of examples of different behavior of the male and female heart under physiological and pathological conditions is steadily increasing and there were controversial reports on the beneficial and adverse effect of hormonal replacement therapy Detailed molecular and cellular mechanisms of these differences are still unknown but one is clear already today sex differences are so important that they should be considered by the selection of optimum diagnostic and therapeutic procedures in clinical practice The book presents 16 manuscripts on sex differences of heart disease as

developed by several investigators the volume is organized in four parts Part I dealing with sex differences in cardiac ischemic injury includes 5 chapters on experimental aspects of cardiac ischemia reperfusion injury the role of testosterone and clinical aspects of ischemic heart disease Part II is devoted to sex differences in heart failure and includes four chapters Discussion in this part of the book is centered around the sex differences in heart failure due to volume overload Part III of this volume includes four papers on risk factors of cardiovascular diseases namely hypertension and obesity and finally three chapters in part IV deal with sex differences of cardiac mitochondria under different pathological conditions We believe this book will be very useful for cardiovascular scientists graduate students postdoctoral fellows and other health professionals

Sex and Cardiac Electrophysiology Marek Malik, 2020-07-11 *Sex and Cardiac Electrophysiology* Differences in Cardiac Electrical Disorders Between Men and Women is a comprehensive investigation into all aspects of sex differences in cardiac electrophysiology. As there are substantial differences between female and male patients in physiology, pathology, triggering factors, disease progression, clinical approaches, and treatment outcome, this book provides a comprehensive examination. In cardiology, the differences between women and men are more recognized; hence, this title summarizes these important differences, providing the essential information needed for clinical specialists and researchers involved in the design and implementation of clinical studies. Explores topics ranging from the physiologic differences between women and men to the differences in clinical handling of arrhythmic disorders between female and male patients. Provides sex differences in cardiac electrophysiology in separate chapters. Covers the sex differences of cardiac electrical disorders, providing insights beyond cardiac metabolic syndrome, hypertension, atherogenesis, and heart failure. *Genetic Causes of Cardiac Disease* Jeanette Erdmann, Alessandra Moretti, 2019-11-27 This book provides a comprehensive summary of the latest developments in the field of the genomics of cardiac disease. Kerkhof, Virginia M. Miller, 2018-07-26 This book gathers together contributions from internationally renowned authors in the field of cardiovascular systems and provides crucial insight into the importance of sex and gender concepts during the analysis of patient data. This innovative title is the first to offer the elements necessary to consider sex-related properties in both clinical and basic studies regarding the heart and circulation on multiscale levels, i.e. molecular, cellular, electrophysiologically, neuroendocrine, immunoregulatory, organ, allometric, and modeling. Observed differences at ultra-cellular and organ level are quantified with focus on clinical relevance and implications for diagnosis and patient management. Since the cardiovascular system is of vital importance for all tissues, *Sex-Specific Analysis of Cardiovascular Function* is an essential source of information for clinicians, biologists, and biomedical investigators. The wide spectrum of differences described in this book will also act as an eye opener and serve as a handbook for students, teachers, scientists, and practitioners. **Sex and Sexuality** M. cardiac resynchronization therapy to improve performance of the congestive failed heart There is an impressive amount of literature produced to assess the efficacy and effectiveness of the electrical therapy New technology is continuously introduced into the market for the treatment of electrical heart disease with optimized performance and implemented design with approximately 600 000 new pacemakers implanted each year Attention of the electrophysiology community has mainly focused on the biomedical aspects of electrical therapy but the psychological emotional social and cognitive aspects of the implantable devices has been largely overlooked Health related quality of life QoL and to a lesser extent psychological disorders i e anxiety and depression have rarely been assessed as outcomes in clinical trials and results are pointing towards the impact of the implantable devices on QoL and mental health not being direct but moderated and mediated by several biomedical as well as psychosocial variables Furthermore the cognitive effects of the implantable devices have rarely been assessed in empirical studies although cognitive impairment is largely associated with the heart disorders that require implantation of an electrical device and cognitive benefits are strongly expected from the therapy The aim of this book is to collect appraise and condense the results of all empirical studies that have investigated even marginally the relationships between the implantable devices and any psychological emotional social and cognitive dimension This book is a cornerstone for all involved in device utilization physicians nurses technicians industry representatives that need to understand this topic

Handbook of Sex Therapy Joseph LoPiccolo, Leslie LoPiccolo, 2012-12-06 When is it timely to publish a synthesis of previously published and original materials from a specific discipline I believe it to be timely when one has a sufficient amount of high quality material covering the critical areas of that topic when the previously published material is scattered over a wide range of journals and books and when there is no single book that synthesizes the discipline The treatment of sexual dysfunction emerged to the front lines of health delivery only during the past decade with the pioneering work of William Masters and Virginia Johnson In spite of the rash of sex clinics and sex therapists that followed precious little solid research has been conducted on the various strategies of therapy the means of assessing complex interpersonal sexual relations and the manner by which clinical change is objectively assessed No one reader can keep pace with the multitude of journals that publish key material by sophisticated investigators And no one investigator can cover these salient areas alone with his or her original work in a single volume The critical papers have now been written Ten were written specifically for this volume and thirty three have previously appeared This volume laces them together into a coherent pattern Thus the time for a synthesis in sexual dysfunction *Manual of Cardiovascular Disease in Women* Angela H.E.M. Maas, Eva Gerds, 2024-09-27 This manual defines sex and gender differences in cardiovascular disease and how they have become an important topic within most subspecialties in the field of cardiology It is now evident that sex differences in biology and lifestyle influence the pathophysiology of heart disease Consequently risk factors for cardiac disease are modified by sex and gender and women and men develop partly different variants of the same heart diseases These facts profoundly

influence prevention and management in clinical practice Good medical practice demands a more tailored and personal care for each individual patient In addition the life course of women has a few unique phases related to hormonal changes in pregnancy and after menopause that also interact with individual risk and the development of co morbidities As heart disease is now the number one cause of death in women worldwide a more specific attention to cardiovascular disease in women is justified Most important advances in gender specific knowledge are related to ischemic heart disease and its traditional and sex specific risk factors Diagnostic pathways have changed coronary angiography is no longer the gold standard that it used to be Recent guidelines and position papers have paid attention to these new insights whereas educational programs urgently need to be adapted The ongoing paradigm shift in cardiology needs to be updated for the clinician in an easy and accessible manner Other important topics in which sex and gender differences have been elaborated are heart failure atrial fibrillation aortic valve disease and its treatment cardiac rehabilitation co morbidities cardiotoxicity in cancer treatment and neurology In addition female specific risk factors and socio economic factors are relevant to women s cardiovascular health We will invite the best EU experts in this field to contribute to the various chapters Manual of Cardiovascular Disease in Women has an educational role for established cardiologists and vascular specialists in training nurses and other allied professionals It represents an update on the most recent insights in sex and gender differences in cardiovascular health with a focus on women s cardiovascular diseases Additional questions via app Download the Springer Nature Flashcards app for free and use exclusive additional material to test your knowledge

Sex differences and cardiovascular therapeutics Sheng Wu,Xiaoyue Pan ,Mohsin Khan,Hong Wang,Xiaofeng Yang,Flavia Franconi ,Ilaria Campesi,2024-06-05 Scientific evidence from both preclinical and clinical studies indicates that male and female patients with cardiovascular disease CVD exhibit different clinical epidemiological and pathological characteristics with sexually dimorphic biological factors exhibiting a significant influence in the development of CVD and therapeutic responses Sexually dimorphic physiology that contributes to sex differences in cardiovascular therapeutic responses may include immune responses cardio renal health the blood brain barrier coronary atherosclerosis pathology complications of COVID 19 infections and the interplay between psychological factors and sedentarism Furthermore current knowledge indicates the role of hormonal regulation has a significant impact in sex specific differences across the clinical cardiology field The National Institute of Health NIH previously adopted a policy to encourage researchers to consider sex as a biological variable SABV as well as Sex and Gender Equity in Research SAGER In order to promote sexual dimorphic cardiovascular therapeutic development we have organized this special topic Sex Differences and Cardiovascular Therapeutics to provide a scientific forum for cardiovascular scientists and clinicians to present their newest findings in characterizing sex differences in cardiovascular therapeutics Potential areas of research within this collection may include but are not limited to 1 Different outcomes and responses to drug treatment in cardiovascular disease between male and female 2 Mechanisms of sexual dimorphic response and outcomes related to drug
