Polymeric Materials For Unusual Service:

Polymers Carole A. Daniels, 1989-11-20 A concise illustrated presentation of polymer structure and bonding The well constructed organization and index make the book readily usable as a reference book Those who read the entire text will be well rewarded with a solid understanding of the fundamentals of polymer properties and possible applications This book will most certainly remain a valuable reference for years to come

Flame-Retardant Polymeric Materials Menachem Lewin, 2013-11-11 Flammability has been recognized as an increasingly important social and scientific problem Fire statistics in the United States Report of the National Commission on Fire Prevention and Control America Burning 1973 emphasized the vast devastation to life and property 12 000 lives lost annually due to fire and these deaths are usually caused by inhaling smoke or toxic gases 300 000 fire injuries 11 4 billion dollars in fire cost at which 2 7 billion dollars is related to property loss a billion dollars to burn injury treatment and 3 3 billion dollars in productivity loss It is obvious that much human and economic misery can be attributed to fire situations In relation to this polymer flammability has been recognized as an increasingly important social and scientific problem The development of flame retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation This is part of the important trend toward a safer environment and sets a pattern for future example Flame retardancy deals with our basic everyday life situations housing work areas transportation clothing and so forth the macroenvironment capsule within which humans live As a result flame retardant polymers are now emerging as a specific class of materials leading to new and diversified scientific and technological ventures

Structure—Property Relationships in Polymers Charles E. Carraher Jr., R.B. Seymour, 2012-12-06 The first concern of scientists who are interested in synthetic polymers has always been and still is How are they synthesized But right after this comes the question What have I made and for what is it good This leads to the important topic of the structure property relations to which this book is devoted Polymers are very large and very complicated systems their characterization has to begin with the chemical composition configuration and conformation of the individual molecule The first chapter is devoted to this broad objective The immediate physical consequences discussed in the second chapter form the basis for the physical nature of polymers the supermolecular interactions and arrangements of the individual macromolecules The third chapter deals with the important question How are these chemical and physical structures experimentally determined The existing methods for polymer characterization are enumerated and discussed in this chapter The following chapters go into

more detail For most applications textiles films molded or extruded objects of all kinds the mechanical and the thermal behaviors of polymers are of pre ponderant importance followed by optical and electric properties Chapters 4 through 9 describe how such properties are rooted in and dependent on the chemical structure More detailed considerations are given to certain particularly important and critical properties such as the solubility and permeability of polymeric systems Macromolecules are not always the final goal of the chemist they may act as intermediates reactants or catalysts This topic is presented in Chapters 10 and 11
