Reflections On Experimental Science Selected Papers:

Reflections on Experimental Science Martin L. Perl, 1996 This is a collection of important lecture and original articles and commentaries by Martin Perl discoverer of the tau lepton and the third generation of elementary particles and this year's Nobel Prize winner This book contains a fascinating and realistic picture of experimental science based on the high energy physics research work carried out by him Using reprints of his articles with his commentaries the author presents the various aspects of experimental research in science the pleasures and risks of experimental work the pain and frustration with experiments that are useless or fail the dreaming about experiments that were not carried out the constant search for innovation and creativity in the work and the special joy of discovery The articles and commentaries range from the early days of bubble chambers and spark chambers in the 1950s to the author's present research experiments at an electron positron collider and a search for free quarks The book is for the general reader as well as the scientist The Collected

Works of Lars Onsager Per Chr Hemmer, 1996 This volume contains the collected works of the eminent chemist and physicist Lars Onsager one of the most influential scientists of the 20th Century The volume includes Onsager's previously unpublished PhD thesis a biography by H C Longuet Higgins and M E Fisher an autobiographical commentary selected photographs and a list of Onsager's discussion remarks in print Onsager's scientific achievements were characterized by deep insights into the natural sciences His two best known accomplishments are his reciprocal relations for irreversible processes for which he received the 1968 Nobel Prize in Chemistry and his explicit solution of the two dimensional Ising model a mathematical tour de force that created a sensation when it appeared In addition he made significant theoretical contributions to other fields including electrolytes colloids superconductivity turbulence ice electrons in metals and dielectrics In this volume Onsager's contributions are divided into the following fields irreversible processes the Ising model electrolytes colloids helium II and vortex quantization off diagonal long range order and flux quantization electrons in metal turbulence ion recombination fluctuation theory dielectrics ice and water biology Mathieu functions The different fields are evaluated by leading experts The commentators are P W Anderson R Askey A Chorin C Domb R J Donnelly W Ebeling J C Justice H N W Lekkerkerker P Mazur H P McKean J F Nagle T Odijk A B Pippard G Stell G H Weiss and C N Yang

Sammlung Alberto Giovannini, 2000 This important volume describes the wide ranging scientific activities of L on Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents The reprinted papers are grouped by topic starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics Van Hove's career as teacher director and science advisor in many European institutions is presented in sketches by friends and coworkers A selection of his speeches and documented thoughts on science completes the volume Subnuclear Physics Antonino Zichichi, 2000 For the Galvani Bicentenary Celebrations the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of

scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences Subnuclear physics has represented ever since it was born the new frontiers of Galilean science In his opening lecture delivered on the first day of the new academic year Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics since its birth in the 20th century Given the importance of this field of fundamental research Professor Zichichi was invited to expand the contents of his lecture into a book and the outcome is this volume *Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations* L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03 UNDER THE SPELL OF THE GAUGE PRINCIPLE by G 't Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus 't Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD In Conclusion James D. Bjorken, 2003 This invaluable volume is a collection of conference talks by James D Bjorken who has made a huge impact on particle physics and the development of the Standard Model The earliest of these talks was given in 1965 and the latest in 1990 The book provides from a personal perspective a glimpse of the complex evolution of the field over those highly productive decades In Conclusion A Collection of Summary Talks in High Energy Physics is aimed at a broad spectrum of particle physicists and students both experimental and theoretical

Quantum Legacy, A: Seminal Papers Of Julian Schwinger Kimball A Milton, 2000-05-25 Julian Schwinger 1918 1994 was one of the giants of 20th Century science He contributed to a broad range of topics in theoretical physics ranging from classical electrodynamics to quantum mechanics from nuclear physics through quantum electrodynamics to the general theory of quantum fields Although his mathematical prowess was legendary he was fundamentally a phenomenologist He

received many awards including the first Einstein Prize in 1951 and the Nobel Prize in 1965 which he shared with Richard Feynman and Sin itiro Tomonaga for the self consistent formulation of quantum electrodynamics into a practical theory His more than 70 doctoral students have played a decisive role in the development of science in the second half of this century This important volume includes many of Schwinger s most important papers on the above and other topics such as the theory of angular momentum and the theory of many body systems The papers collected here continue to underlie much of the work done by theoretical physicists today

From The Preshower To The New Technologies For Supercolliders Albrecht Wagner,Horst Wenninger,Bjorn H Wiik,2002-12-24 In the year 2000 the city of Bologna was the European Capital for Culture For this reason the University of Bologna and its Academy of Sciences following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations decided to call attention to the major achievements of their most distinguished members in science and technology This invaluable volume presents a series of inventions and technological developments some thought of and directly implemented by Professor Antonino Zichichi others suggested and developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was conceived by an eminent scientist Professor Dr Bj rn H Wiik Director of Germany s most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory

The Origin of the Third Family Chien-shiung Wu,Ottavio Barnabei,1998 In 1967 a group of physicists from the University of Bologna led by A Zichichi published a proposal to search for a heavy lepton using the Frascati e e collider The proposal whose key pages are reproduced in this book on the 30th anniversary of the publication was the consequence of many years of work started at CERN where in addition to the original idea of searching for a heavy lepton carrying its own leptonic number new technologies were invented to allow the detection of a signal whose identification against the high background of hadronic processes was extremely difficult More than ten years of work by A Zichichi together with his students and his collaborators have paved the way for the discovery of the Third Family of fundamental particles In this authoritative volume a group of eminent physicists unequivocally establishes the origin of the Third Family of the basic constituents of matter
