Institute of Medicine, Board on Health Sciences Policy, Committee on a Review of the California Institute for Regenerative Medicine, 2013-03-27 The California Institute for Regenerative Medicine CIRM was created in 2005 by The California Stem Cell Research and Cures Act Proposition 71 to distribute 3 billion in state funds for stem cell research The passage of Proposition 71 by the voters of California occurred at a time when federal funding for research involving human embryonic stem cells was uncertain given the ethical questions raised by such research During its initial period of operations CIRM has successfully and thoughtfully provided more than 1.3 billion in awards to 59 California institutions consistent with its stated mission As it transitions to a broadened portfolio of grants to stimulate progress toward its translational goals the Institute should obtain cohesive longitudinal and integrated advice restructure its grant application review process and enhance industry representation in aspects of its operations CIRM's unique governance structure while useful in its initial stages might diminish its effectiveness moving forward The California Institute for Regenerative Medicine Science Governance and the Pursuit of Cures recommends specific steps to enhance CIRM's organization and management as well as its scientific policies and processes as it transitions to the critical next stages of its research and development program *Cell Biology and Translational Medicine, Volume 1* Kursad Turksen, 2018-10-02 Much research has focused on the basic cellular and molecular biological aspects of stem cells Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions With a goal to accelerate advances by timely information exchange this new book series Cell Biology and Translational Medicine CBTMED as part of Springer Nature's longstanding and very successful Advances in Experimental Medicine and Biology book series is launched Emerging areas of regenerative medicine and translational aspects of stem cells will be covered in each volume Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas This current book is the first volume of a continuing series *Regenerative Medicine in Aesthetic Treatments* Aamer Khan, 2021-10-21 Physicians are now in a position proactively to use stem cells and their growth factors to regenerate the human body Within the field of aesthetics regenerative medicine is being used to reverse the ageing of tissues and to repair scarring to an unprecedented level This highly illustrated text from an internationally recognized expert in cosmetic procedures documents the procedures and results for patients *The Bioethics of Regenerative Medicine* King-Tak IP, 2008-12-24 Regenerative medicine is rich with promethean promises The use of human embryonic stem cells in research is justified by its advocates in terms of promises to cure a wide range of diseases and disabilities from Alzheimer's and Parkinsonism to the results of heart attacks and spinal cord injuries More broadly there is the promethean allure of being able to redesign human biological nature in terms of the goals and concerns of humans Needless to say these allures and promises have provoked a wide range of not just moral but metaphysical reflections that

reveal and reflect deep fault lines in our cultures The essays in this volume directly and indirectly present the points of controversy as they tease out the character of the moral issues that confront any attempt to develop the human regenerative technologies that might move us from a human to a post human nature Although one can appreciate the disputes as independently philosophical they are surely also a function of the conflict between a Christian and a post Christian culture in that Christianity has from its beginning recognized a fundamental prohibition against the taking of early human life Even the philosophical disputes that frame secular bioethics are often motivated and shaped by these background cultural conflicts These essays display this circumstance in rich ways
