Rendez Vous:

Rendezvous with the Sensuous John Murungi, 2014-03-17 In *Rendezvous with the Sensuous* readers are drawn to and become situated within the dynamic place of the aesthetic experience. While there human sensuousness comes into relief as it combines with the sensuousness that derives from nature. In this complex place where artistic expression coalesces with the natural world readers are extended an invitation to share in the journey of a richly diverse synesthetic experience and to gain a greater appreciation of the important place of the sensuous in illuminating the role of aesthetics in the world of ideas.

Understanding Alain Robbe-Grillet Roch C. Smith, 2000 Transforming bewilderment into understanding and pleasure while preserving a sense of Robbe Grillet's considerable richness and complexity. Smith elucidates the defining elements of the writer's fictional world: characters that barely exist, changeable narrators, plots that defy logic, notoriously meticulous descriptions that never quite form a complete story. Smith examines Robbe Grillet's embrace of discontinuity, circularity, indeterminacy, and linguistic play. Smith also poses questions about how we should view this perplexing writer as an author of hyperobjective novels and short stories, a subjective novelist, a realist, or a writer who undermines the narrative's claim to represent reality. In addition, Smith evaluates the sado-erotic imagery of Robbe Grillet's middle and late novels as a

metaphorical play with textual and social conventions. **BOOK JACKET** **Passion to Dance** James Neufeld, 2011-10-23 This is the story of the National Ballet of Canada: the people, the determination, and how at sixty it is still creating new work while still representing the classics. *Passion to Dance* is the story of the National Ballet of Canada: the people who dreamt the company into existence, the determination needed to keep it afloat, the bumps on the road to its success, and above all its passion for dance as a living, evolving art form. From catch-as-catch-can beginnings, borrowed quarters, tiny stages, enormous dreams, the National Ballet has emerged as one of North America's foremost dance troupes. The company at sixty is a company of its time, engaged in creating challenging new work yet committed to maintaining the classics of the past: favourites like *Swan Lake*, *The Nutcracker*, and *The Sleeping Beauty*. One hundred and fifty photographs from the company's archives illustrate this definitive history, filled with eyewitness accounts, backstage glimpses, and fascinating detail. This is a record of one of Canada's boldest cultural experiments, a book to enjoy now and keep forever. [Dundurn Performing Arts](#)

[Library Bundle — Theatre](#) James Neufeld, Charles Foster, Mel Atkey, Martin Hunter, Sheila M.F. Johnston, Ward McBurney, 2013-12-26 This special bundle contains seven books that detail Canada's long and storied history in the performing arts. We learn about Canada's early Hollywood celebrity movie stars, Canadians' vast contributions to successful international stage musicals, the story of *The Grand*, a famous theatre in London, Ontario, reminiscences from the early days of radio, the history of the renowned Stratford Festival, and a lavish history of the famous National Ballet of Canada. Canada's performing artists blossomed in the twentieth century, and you can learn all about it here. Includes *Broadway North*, *Let's Go to The Grand*, *Once Upon a Time in Paradise*, *Passion to Dance*, *Sky Train*, *Romancing the Bard*, *Stardust*, and *Shadows*.

Rendezvous in Distributed Systems Zhaoquan Gu, Yuexuan Wang, Qiang-Sheng Hua, Francis C.M. Lau, 2017-08-22 This book introduces novel solutions to the rendezvous problem in distributed systems a fundamental problem that underpins the construction of many important functions in distributed systems and networks The book covers rendezvous theories distributed rendezvous algorithms and rendezvous applications in practical systems presents state of the art rendezvous results and highlights the latest methods of rendezvous in distributed systems It provides in particular an in depth treatment of the blind rendezvous and oblivious blind rendezvous problems and their solutions Further it sheds new light on rendezvous applications in cognitive radio networks and rendezvous search in graphs As such it will also be of interest to readers from other research fields such as robotics wireless sensor networks and game theory *Enchanted Rendezvous* James R. Hansen, 1995 **The Mobile Agent Rendezvous Problem in the Ring** Evangelos Kranakis, Danny Krizanc, Euripides Marcou, 2022-05-31 Mobile agent computing is being used in fields as diverse as artificial intelligence computational economics and robotics Agents ability to adapt dynamically and execute asynchronously and autonomously brings potential advantages in terms of fault tolerance flexibility and simplicity This monograph focuses on studying mobile agents as modelled in distributed systems research and in particular within the framework of research performed in the distributed algorithms community It studies the fundamental question of how to achieve rendezvous the gathering of two or more agents at the same node of a network Like leader election such an operation is a useful subroutine in more general computations that may require the agents to synchronize share information divide up chores etc The work provides an introduction to the algorithmic issues raised by the rendezvous problem in the distributed computing setting For the most part our investigation concentrates on the simplest case of two agents attempting to rendezvous on a ring network Other situations including multiple agents faulty nodes and other topologies are also examined An extensive bibliography provides many pointers to related work not covered in the text The presentation has a distinctly algorithmic rigorous distributed computing flavor and most results should be easily accessible to advanced undergraduate and graduate students in computer science and mathematics departments Table of Contents Models for Mobile Agent Computing Deterministic Rendezvous in a Ring Multiple Agent Rendezvous in a Ring Randomized Rendezvous in a Ring Other Models Other Topologies *Guidance, Navigation, and Control for Spacecraft Rendezvous and Docking: Theory and Methods* Yongchun Xie, Changqing Chen, Tao Liu, Min Wang, 2021-02-16 This book focuses on the theory and design methods for guidance navigation and control GNC in the context of spacecraft rendezvous and docking RVD The position and attitude dynamics and kinematics equations for RVD are presented systematically in accordance with several different coordinate systems including elliptical orbital frame and recommendations are supplied on which of these equations to use in different phases of RVD The book subsequently explains the basic principles and relative navigation algorithms of RVD sensors such as GNSS radar and camera type RVD sensors It also provides guidance algorithms and schemes for different phases of RVD including the latest research advances in rapid

RVD In turn the book presents a detailed introduction to intelligent adaptive control and proposes corresponding theoretical approaches to thruster configuration and control allocation for RVD Emphasis is placed on the design method of active and passive trajectory protection in different phases of RVD and on the safety design of the RVD mission as a whole For purposes of verification the Shenzhou spacecraft s in orbit flight mission is introduced as well All issues addressed are described and explained from basic principles to detailed engineering methods and examples providing aerospace engineers and students both a basic understanding of and numerous practical engineering methods for GNC system design in RVD An

Assessment of the Technology of Automated Rendezvous and Capture in Space M. E. Polites,1998 **The Theory of Search Games and Rendezvous** Steve Alpern,Shmuel Gal,2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the ze sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem
