Nørskov,J. Seibt,O.S. Quick,2021-01-04 The subject of social robotics has enormous projected economic significance However social robots not only present us with novel opportunities but also with novel risks that go far beyond safety issues It is a potentially highly disruptive technology which could negatively affect the most valuable parts of the fabric of human social interactions in irreparable ways Since engineering educations do not yet offer the necessary competences to analyze holistically assess and constructively mitigate these risks new alliances must be established between engineering and SSH disciplines with special emphasis on the humanities i e disciplines specializing in the analysis of socio cultural interactions and human experience The Robophilosophy Conference Series was established in 2014 with the purpose of creating a new forum and catalyzing the research discussion in this important area of applied humanities research with focus on

robophilosophy Robophilosophy conferences have been the world's largest venues for humanities research in and on social robotics. The book at hand presents the proceedings of Robophilosophy Conference 2020 Culturally Sustainable Social Robotics, the fourth event in the international biennial Robophilosophy Conference Series which brought together close to 400 participants from 29 countries. The speakers of the conference whose contributions are collected in this volume were invited to offer concrete proposals for how the Humanities can help to shape a future where social robotics is guided by the goals of enhancing socio-cultural values rather than by utility alone. The book is divided into 3 parts: Abstracts of Plenaries which contains 6 plenary sessions; Session Papers with 44 papers under 8 thematic categories; and Workshops containing 25 items on 5 selected topics. Providing concrete proposals from philosophers and other SSH researchers for new models and methods, this book will be of interest to all those involved in developing artificial social agents in a culturally sustainable way that is also a fortiori ethically responsible.

Agricultural Robots Naoshi Kondo, Mitsuji Monta, Noboru Noguchi, 2011. The history of Japan's agriculture is characterized by efforts to increase production and productivity. At the beginning of the 21st century, both public and private sector research has focused on developing ever more sophisticated tools to address a wide range of challenges facing the agricultural industry. An amazing array of automation technologies and robots have been developed in the process to do everything from tilling fields to picking strawberries from planting rice seedlings to autonomously weeding the paddies. This richly illustrated volume surveys the results of these efforts concisely and plainly, presenting specific examples of the latest robotic mechanisms and practices for agricultural applications.

Robotic Assistive Technologies Pedro Encarnação, Albert Cook, 2017-02-03. This book contains a comprehensive overview of all current uses of robots in rehabilitation. The underlying principles in each application are provided. This is followed by a critical review of the technology available, the utilization protocols, and of user studies outcomes and clinical evidence if existing. Ethical and social implications of robot use are also discussed. The reader will have an in-depth view of rehabilitation robots from principles to practice.

Reoperative Pelvic Surgery Richard P. Billingham, Kathleen C. Kobashi, William A. Peters, 2009-08-15. The impetus for this book came from the recent appearance of single specialty books pertaining to reoperative surgery on various organs in the pelvis as well as from the recognition that

several different disciplines are involved with the challenges of reoperative pelvic surgery Surgeons often encounter challenging dilemmas involving organ systems that have historically been attended to by surgeons representing closely related but distinct specialty areas With increasing sophistication and knowledge about management of anatomically adjacent organs by the specialties of gynecologic oncology gynecology urology and colon and rectal surgery as well as the emergence of specialty training programs in urogynecology and pelvic floor disorders we thought it appropriate and timely to create a textbook acknowledging this increasing knowledge and interspecialty collaboration To this end where appropriate we have included collaborative authors from each of the specialties any of whom may be called upon to address a particular anatomic area It seems inevitable that situations will arise in which the collaborative expertise of several separate specialties may converge to provide surgeons the benefit of the combined thought processes that would prove invaluable when such difficult problems are encountered With this in mind the editors from the fields of gynecologic oncology urology and colon and rectal surgery identified experts in their own fields who could best contribute to the management of specific problem areas For example since reoperations for endometriosis may involve uterus adnexae ovaries or the colorectum the chapter concerning this condition has been coauthored by specialists in colorectal surgery and gynecologic oncology We have been fortunate to find experts who have collaborated to bring available evidence based medicine best demonstrated practices and personal experience to their contributions

Schack Andersen, 2016-10-14 Social robotics drives a technological revolution of possibly unprecedented disruptive potential both at the socio economic and the socio cultural level The rapid development of the robotics market calls for a concerted effort across a wide spectrum of academic disciplines to understand the transformative potential of human robot interaction This effort cannot succeed without the special expertise in the study of socio cultural interactions norms and values that humanities research provides This book contains the proceedings of the conference What Social Robots Can and Should Do Robophilosophy 2016 TRANSOR 2016 held in Aarhus Denmark in October 2016 The conference is the second event in the biennial Robophilosophy conference series this time combined with an event of the Research Network for Transdisciplinary Studies in Social Robotics TRANSOR Featuring 13 plenaries and 74 session and workshop talks the event turned out to be the world's largest conference in Humanities research in and on social robotics The book is divided into 3 sections Part I and Part III contain the abstracts of plenary lectures and contributions to 6 workshops Artificial Empathy Co Designing Children Robot Interaction Human Robot
