Experimental Robotics VIII

Bruno Siciliano, Paolo Dario, 2003-09-05 This book collects papers on the state of the art in experimental robotics Experimental Robotics is at the core of validating robotics research for both its systems science and theoretical foundations Because robotics experiments are carried out on physical complex machines whose controllers are subject to uncertainty

devising meaningful experiments and collecting statistically significant results pose important and unique challenges in robotics. Robotics experiments serve as a unifying theme for robotics system science and algorithmic foundations. These observations have led to the creation of the International Symposia on Experimental Robotics. The papers of the book were presented at the 2002 International Symposium on Experimental Robotics. **Experimental Robotics VII** Daniela Rus, Sanjiv Singh, 2007-09-04. Experimental robotics is at the core of validating robotics research for both its system science and theoretical foundations. Robotics experiments serve as a unifying theme for robotics system science and theoretical foundations. This book collects papers on the state of the art in experimental robotics. The papers were presented at the 2000 International Symposium on Experimental Robotics. **Collaborative Engineering** Ali K. Kamrani, Emad Abouel Nasr, 2008-07-08. Collaborative Engineering (CE) is the systematic approach to the integrated concurrent design of products and related processes including manufacturing, product service and support. This approach is intended to cause the developers to consider all elements of the product life cycle from conception through disposal, including quality, cost, schedule and user requirements. The objective of Collaborative Engineering is to reduce the system product development cycle time through a better integration of resources, activities and processes. Collaborative Engineering Theory and Practice offers insights into the methods and techniques that enable implementing a Collaborative Engineering concept on product design by integrating capabilities for intelligent information support and group decision making utilizing a common enterprise network model and knowledge interface through shared ontologies. The book is also a collection of the latest applied methods and technology from selected experts in this area which will be structured in a way useful in assisting and structuring the course. **Eighth International Conference on Quality Control by Artificial Vision** David Fofi, Fabrice Meriaudeau, 2007. Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

Special Issue on the 8th International Symposium on Experimental Robotics (ISER '02) International Symposium on Experimental Robotics (8, 2002, Sant'Angelo, Ischia), 2004. **Underactuated Robotic Hands** Lionel Birglen, Thierry Laliberté, Clément M. Gosselin, 2007-12-23. Grasping and manipulation skills are at the core of the development of modern robotic systems. With the introduction of robotics in new applications involving unstructured environments e.g. space, undersea surgery, intelligent manipulation and grasping has become a crucial research area. The authors have developed an internationally recognized expertise in this area. Additionally, they designed and built several prototypes which attracted the attention of the scientific community. Their work was reported in several publications which appeared in the most renowned journals and conferences. The purpose of this book is to summarize years of research and to present in an attractive format the expertise developed by the authors on a new technology for grasping, namely under

actuation which has achieved great success both in theory and in practice This book is not intended to be used as a textbook but could be used as a reference at the post graduate level

Robotics and Cognitive Approaches to Spatial Mapping

Margaret E. Jefferies, Wai-Kiang Yeap, 2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem The book brings together the fields of robot spatial mapping and cognitive spatial mapping which share some common core problems One would expect some cross fertilization of research between the two areas to have occurred yet this has begun only recently There are now signs that some synthesis is happening so this work is a timely one for students and engineers in robotics

Robot Navigation from Nature

Michael John Milford, 2008-02-11 This pioneering book describes the development of a robot mapping and navigation system inspired by models of the neural mechanisms underlying spatial navigation in the rodent hippocampus Computational models of animal navigation systems have traditionally had limited performance when implemented on robots This is the first research to test existing models of rodent spatial mapping and navigation on robots in large challenging real world environments
