Rockets and People Boris Evseevich Chertok, 2005 V 1 no special title v 2 Creating a rocket industry v 3 Hot days of the Cold War v 4 The moon race

Erasmus Darwin Desmond King-Hele, 2012-07-18 It has been said of Erasmus Darwin 1731 1802 that no one from his day to ours has ever rivalled him in his achievements in such a wide range of fields He was a far sighted scientific genius fertile in theory and invention and one of the foremost physicians of his time His gift for friendship enabled him to recruit the members of the Lunar Society of Birmingham which is often seen as the main intellectual powerhouse of the Industrial Revolution in England He was especially close to Franklin Wedgwood Boulton and Watt Towards the end of his life he gained recognition as the leading English poet in the country and

he deeply influenced Blake Wordsworth Coleridge and Shelley The most striking of Darwin's many talents was his extraordinary scientific insight in physics chemistry geology meteorology and all aspects of biology his deepest insight being his evolutionary theory of life Two of his books the Zoonomia which made him famous as the leading medical mind of the 1790s and The Temple of Nature a long poem show that he believed life developed from microscopic specks in primeval seas through fishes and amphibians to humankind But he failed to convince the world about biological evolution that was left to his grandson Charles Erasmus was the first person to give a full description of how clouds form and of photosynthesis in plants He was also an obsessive inventor of mechanical devices among them a speaking machine a copying machine and the steering technique used in modern cars Substantial donations of Darwin family papers recently to the Cambridge University Library including over 170 letters written by Erasmus Darwin himself have made it possible for the author to tell much of the enthralling story of his life in Erasmus own words Desmond King Hele who is the leading authority on Erasmus Darwin having studied his life and work for three decades is a mathematician and physicist who is an expert on space research by satellite in particular on the Earth's gravity field and the upper atmosphere W F Bynum in Nature To most people who have heard of him Erasmus Darwin was a successful doctor bad poet and most significantly the grandfather of Charles Darwin In this astonishing book Desmond King Hele seeks to reverse the judgement and argue that Charles should rather be remembered as Erasmus's grandson that Erasmus was much the brighter spark a genius of rare qualities Few scientific lives have ever been so carefully and thoughtfully examined There are no final words in history but this is a biography for which the word definitive can be aptly applied Patricia Fara in Times Higher Educational Supplement Instead of being dismissed as the whimsical creator of a bizarre tale of gaudily dressed characters engrossed in various forms of polygamy he is now recognized as an influential author and an important man of science who made vital contributions to the early stages of English industrialization A moving and amply researched narrative of a man who for the author has acquired a heroic stature Choice King Hele's splendid biography of Charles Darwin's grandfather

The Century of Space Science

J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and

how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection To a Distant Day Chris Gainor,2008-01-01 Insightful instructive and definitely worth the read Greg Andres Journal of the Royal Astronomical Society of Canada As someone who has been teaching a course on space exploration for many years and has visited most of NASA s space centers I have found plenty of new and valuable material in To a Distant Day I recommend the book to all who wish to know more about the conditions people and discoveries between 1890 and 1960 that led to the space age Pangratios Papacosta Physics Today Although the dream of flying is as old as the human imagination the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space Chris Gainor s irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky Robert Goddard and Hermann Oberth who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration It shows us German engineer Wernher von Braun creating the V 2 the first large rocket which though opening the door to space failed utterly as the wonder weapon it was meant to be From there Gainor follows the space race to the Soviet Union and the United States giving us a close look at the competitive hysteria that led to Sputnik satellites space probes and finally human flight into space in 1961 As much a story of cultural ambition and personal destiny as of scientific progress and technological history To a Distant Day offers a complete and thoroughly compelling account of humanity s determined efforts sometimes poignant sometimes amazing sometimes mad to leave the earth behind **Rockets and People, Volume III, Hot Days of the Cold War** , Red Cosmos James T.

Andrews,2009-07-24 Long before the space race captured the world s attention K E Tsiolkovskii first conceived of multi stage rockets that would later be adapted as the basis of both the U S and Soviet rocket programs Often called the grandfather of Russian rocketry this provincial scientist was even sanctioned by Stalin to give a speech from Red Square on May Day 1935 lauding the Soviet technological future while also dreaming and expounding on his own visions of conquering the cosmos Later the Khrushchev regime used him as a poster boy for Soviet excellence during its Cold War competition with the United States Ironically some revisionists have since pointed to such blatant promotion by the Communist Party in an attempt to downplay Tsiolkovskii s scientific contributions James T Andrews explores the complexities of this man to show that Tsiolkovskii was much more than either a rocket inventor or a propaganda tool He was a science popularizer novelist technical inventor and visionary whose science fiction writings included futuristic drawings of space stations long before they appeared on any engineer s drawing board Mining a myriad of Russian archives Andrews produces not only a biographical

account but also a study of Soviet technological propaganda local science education public culture in the 1920s and 1930s and the cultural ramifications of space flight *Encyclopedia of the Solar System* Tilman Spohn,Doris Breuer,Torrence Johnson,2014-05-30 The Encyclopedia of the Solar System Third Edition winner of the 2015 PROSE Award in Cosmology Astronomy from the Association of American Publishers provides a framework for understanding the origin and evolution of the solar system historical discoveries and details about planetary bodies and how they interact with an astounding breadth of content and breathtaking visual impact The encyclopedia includes the latest explorations and observations hundreds of color digital images and illustrations and over 1 000 pages It stands alone as the definitive work in this field and will serve as a modern messenger of scientific discovery and provide a look into the future of our solar system New additions to the third edition reflect the latest progress and growth in the field including past and present space missions to the terrestrial planets the outer solar systems and space telescopes used to detect extrasolar planets Winner of the 2015 PROSE Award in Cosmology Astronomy from the Association of American Publishers Presents 700 full color digital images and diagrams from current space missions and observatories bringing to life the content and aiding in the understanding and retention of key concepts Includes a substantial appendix containing data on planetary missions fundamental data of relevance for planets and satellites and a glossary providing immediately accessible mission data for ease of use in conducting further research or for use in presentations and instruction Contains an extensive bibliography providing a guide for deeper studies into broader aspects of the field and serving as an excellent entry point for graduate students aiming to broaden their study of planetary science *Celestial Treasury* Marc Lachière-Rey,Jean-Pierre Luminet,2001-07-16 Throughout history the mysterious dark skies above us have inspired our imaginations in countless ways influencing our endeavours in science and philosophy religion literature and art Heavenly Treasures is a truly beautiful book showing the richness of astronomical theories and illustrations in Western civilization through the ages exploring their evolution and comparing ancient and modern throughout From Greek verse mediaeval manuscripts and Victorian poetry to spacecraft photographs and computer generated star charts the unprecedented wealth of these portrayals is quite breathtaking *Diverse Topics in Science and Technology* Benu Chatterjee,2013-09-30 In a spirit of free thinking articles are written on a wide range of topics These include environmental matters technological history science of common experiences science of natural phenomena origins of diverse mineral colours and super active Earth s core we are standing on **Mechanism Design, Behavioral Science and Artificial Intelligence in International Relations** Tshilidzi Marwala,2024-07-23 Recent advances in AI and Mechanism Design provide a vital tool for solving collective action problems common in international relations By using AI to optimize mechanisms for cooperation and coordination we can better address issues such as climate change trade and security Mechanism Design Behavioral Science and Artificial Intelligence in International Relations shows readers how the intersection of Mechanism Design and Artificial Intelligence is revolutionizing the way we approach international relations By
