anatomical and clinical evidence Although this view of a dual temporal lobe is generally accepted by neurosurgeons dealing with functional surgery it still receives little attention by those approaching structural abnormalities located or extending into the medio basal region Consequently the characterization of the temporo medial area as a distinct surgical region is still lacking The major object of this study is to analyse the medial part of the temporal lobe as a distinct surgical region and to integrate the microsurgical and physiological aspects into a concept applicable to the several types of temporo medial lesion The study includes five sections The first section is devoted to the morphological aspects the second and the third sections present a simplified clinical approach to temporo medial lesions and analyse the ancillary investigations which are indispensable for characterizing their structural and functional features The fourth section deals with the surgical aspects of temporo medial lesions and especially with the selection of the optimal approach in regard to the location of a given process and to the extent of the functional changes The last section is devoted to commentaries concerning the neuropathological aspects and the outcome of surgery in the temporo medial region
