Surgical Revolutions: A Historical And Philosophical View Luis H Toledo-pereyra,2011-07-08 Many surgical revolutions distinguish the history and evolution of surgery Some are small others more dominant but each revolution improves the art and science of surgery Surgical revolutionaries are indispensable in the conception and completion of any surgical revolution initiating scientific and technological advances that propel surgical practice forward Surgical revolutionaries can come in the guises of Lister antisepsis Halsted surgical residency and safe surgery Cushing safe brain surgery Wangensteen gastrointestinal physiological surgery Blalock relief of cyanotic heart disease Lillehei open heart surgery and many others With the hindsight of history we can recognize patterns of progress evaluate means of advancing new ideas and solidify details of innovative behavior that could lead to new surgical revolutions This volume examines the following vital questions in detail What is a surgical revolution and how do we recognize one Are surgical revolutionaries different Is there a way to educate new surgical revolutionaries Can history provide enduring examples of surgical revolutions Are there different kinds of surgical revolutions What characterizes a surgical revolution in the context of science and technology What surgical revolutions are on the horizon *Kuhn's The Structure of Scientific Revolutions Revisited* Vasso Kindi,Theodore Arabatzis,2013-05-20 The year 2012 marks the 50th anniversary of the publication of Thomas S Kuhn s *The Structure of Scientific Revolutions* Up until recently the book s philosophical reception has been shaped for the most part by the debates and the climate in philosophy of science in the 1960s and 1970s this new collection of essays takes a renewed look at this work This volume concentrates on particular issues addressed or raised in light of recent scholarship and without the pressure of the immediate concerns scholars had at the time of the *Structure* s publication There has been extensive research on all of the major issues concerning the development of science which are discussed in *Structure* work in which the scholars contributing to this volume have all been actively involved In recent years they have pursued novel research on a number of topics relevant to *Structure* s concerns such as the nature and function of concepts the complexity of logical positivism and its legacy the relation of history to philosophy of science the character of scientific progress and rationality and scientific realism all of which are brought together and given new light in this text In this way our book makes new connections and undertakes new approaches in an effort to understand the *Structure* s significance in the canon of philosophy of science Thrall's Textbook of Veterinary Diagnostic Radiology - E-Book Gabriela Seiler,Donald E. Bibliography of the History of Medicine , *Archives of the Roentgen Ray* ,1899 Visual Representations and Interpretations Ray Paton,Irene Neilsen,2012-12-06 The value of multi disciplinary research and the exchange of ideas and methods across traditional discipline boundaries are well recognised Indeed it could be justifiably argued that many of the advances in science and engineering take place because the ideas methods and the tools of thought from one discipline become re applied in others Sadly it is also the case that many subject areas develop specialised vocabularies and concepts and can consequently approach more general problems in fairly narrow subject specific ways Consequently barriers develop between disciplines that prevent the free flow of ideas and the collaborations that on Visual Representations could often bring success VRI 98 a workshop focused Interpretations was intended to break down such barriers The workshop was held in the Foresight Conference Centre which occupies part of the former Liverpool Royal Infirmary a Grade 2 listed building which has been recently restored The building combines a majestic architecture with the latest in new conference facilities and technologies and thus provided a very suitable setting for a workshop aimed at bringing the Arts and the Sciences together of the workshop was to promote inter disciplinary awareness across The main aim a range of disciplines where visual representations and interpretations are exploited Contributions to the workshop were therefore invited from researchers who are actively investigating visual representations and interpretations artists architects biologists chemists clinicians cognitive scientists computer scientists educationalists engineers graphic designers linguists mathematicians philosophers physicists psychologists and social scientists
