Role Of Central Conceptual Structures In The Development Of C

Role Of Central Conceptual Structures In The Development Of C:

The Mind's Staircase Robbie Case, 2013-04-15 The shortcomings of Piaget's theory of intellectual development are well known. Less clear is what sort of theory should be devised to replace it. This volume describes the current main contenders including neo-Piagetian, neo-connectionist, neo-innatist and sociocultural models. Its contributors conclude that none of these models are adequate because each one implies a view of the human mind which is either too general, too particular or too modular. A collaborative program of research seven years in the making is then described which gives support to a newly emerging synthesis of these various positions.

Cognitive Development Sergio Morra, Camilla Gobbo, Zopito Marini, Ronald Sheese, 2012-12-06 Tying together almost four decades of neo-Piagetian research, *Cognitive Development* provides a unique critical analysis and a comparison of concepts across neo-Piagetian theories. Like Piaget, neo-Piagetian theorists take a constructivist approach to cognitive development; are broad in scope and assume that cognitive development is divided into stages with qualitative differences. Unlike Piaget, however, they define the increasing complexity of the stages in accordance with the child's information processing system rather than in terms of logical properties. This volume illustrates these characteristics and evidences the exciting possibilities for neo-Piagetian research to build connections both with other theoretical approaches such as dynamic systems and with other fields such as brain science. The opening chapter provides a historical orientation including a critical distinction between the logical and the dialectical Piaget. In subsequent chapters the major theories and experimental findings are reviewed including Pascual Leone's Theory of Constructive Operators, Halford's structuralist theory, Fischer's dynamic systems approach to skills, Case's theory of Central Conceptual Structures, Siegler's microgenetic approach and the proposals of Mounoud and Karmiloff-Smith as well as the work of others including Demetriou and de Ribaupierre. The interrelation of emotional and cognitive development is discussed extensively as is relevant non-neo-Piagetian research on information processing. The application of neo-Piagetian research to a variety of topics including children's problem solving, psychometrics and education is highlighted. The book concludes with the authors' views on possibilities for an integrated neo-Piagetian approach to cognitive development.

Exceptionality in East Asia Shane N. Phillipson, Heidrun Stoeger, Albert Ziegler, 2013-01-04 The continual successes of students from East Asia are confirmed in a variety of international tests of academic achievement and yet despite this attainment many scholars have realised that a substantial proportion of these students are also underachieving. Using the actiotope model of giftedness to integrate a broad range of research, this innovative book features a number of chapters written by internationally recognised scholars in a frank and lively discussion about the origins of exceptionality in students from East Asia. With the actiotope model as the theoretical framework, the book distinguishes between trait models of giftedness and systems approaches to exceptionality. Breaking new ground in understanding the complex interactions between a learner's environment, goals, intelligence and motivations in the development of their ever-expanding knowledge and skill set, this book will describe with examples a

systems approach to the development of exceptionality allowing educators and researchers the ability to track students with greater precision influence the means by which educators identify and support students with the potential for exceptional performance suggest possible reasons for the variability in the achievement of potentially gifted students provide strategies to support these students have a profound effect on the way that exceptionality and giftedness are defined and understood not only in East Asia but also in the West Covering issues that have firm theoretical foundations and which are based on cutting edge ideas Exceptionality in East Asia has significant implications for gifted education and is essential reading for scholars undergraduate and postgraduate students interested in the psychological and social basis of exceptionality

Developing

Thinking and Understanding in Young Children Sue Robson, 2012-01-19 Developing Thinking and Understanding in Young Children presents a comprehensive and accessible overview of contemporary theory and research about young children's developing thinking and understanding. Throughout this second edition, the ideas and theories presented are enlivened by transcripts of children's activities and conversations taken from practice and contemporary research, helping readers to make links between theory, research and practice. Each chapter also includes ideas for further reading and suggested activities. Aimed at all those interested in how young children develop through their thoughts and actions, Sue Robson explores theories of cognitive development, the social, emotional and cultural contexts of children's thinking, children's conceptual development, visual thinking, approaches to supporting the development of young children's thinking and understanding, latest developments in brain science and young children, the central roles of play and language in young children's developing thinking. Including a new chapter on young children's musical thinking, expanded sections on self-regulation, metacognition and creative thinking, and the use of video to observe and describe young children's thinking, this book will be an essential read for all students undertaking Early Childhood Primary PGCE and EYPS courses. Those studying for a Foundation degree in Early Years and Childcare will also find this book to be of interest.

Teaching for Transfer Anne McKeough, Judy Lee Lupart, Anthony Marini, 2013-12-16 The transfer of learning is universally accepted as the ultimate aim of teaching. Facilitating knowledge transfer has perplexed educators and psychologists over time, and across theoretical frameworks, it remains a central issue for today's practitioners and theorists. This volume examines the reasons for past failures and offers a reconceptualization of the notion of knowledge transfer, its problems and limitations, as well as its possibilities. Leading scholars outline programs of instruction that have effectively produced transfer at a variety of levels, from kindergarten to university. They also explore a broad range of issues related to learning transfer, including conceptual development, domain-specific knowledge, learning strategies, communities of learners, and disposition. The work of these contributors epitomizes theory-practice integration and enables the reader to review the reciprocal relation between the two that is so essential to good theorizing and effective teaching.

Developmental Relations among Mind, Brain and Education Michel Ferrari, Ljiljana Vuletic, 2010-06-09 Robert S. Siegler. Robbie Case: A Modern Classic. About 15 years ago, Robbie asked me what I thought of a talk we had just heard. I indicated that I hadn't much liked it and noted several serious problems. Robbie agreed with all of the criticisms but said that he nonetheless liked the talk because there was one good idea in it that he could use. I agreed with him that the idea was a good one, but it took me a while to understand the wisdom of his position. If there's one useful idea in a talk, then hearing it has been worthwhile, even if the talk also has numerous deficiencies. On that day and on many others, talking with Robbie changed my thinking for the better. Robbie Case was in many ways a classic developmental psychologist of the old school. The depth and breadth of his theory, the range of age groups, populations, and topics that he studied, and his efforts to connect theory and application are all reminiscent of the greats of the past: Baldwin,

Dewey Piaget Vygotsky and Bruner

Theories of Human Development Barbara M. Newman, Philip R.

Newman, 2015-06-26 Key human development theories that continue to guide research and practice are examined in this engaging text. Ten key theories are grouped into three families: those that emphasize biological systems, environmental factors, and those that reflect an interaction between the two. This organization enhances students' ability to evaluate, compare, and contrast theories both within and across families. Each family is introduced with an overview of their unique perspectives and the rationale for grouping them together. Discussion of each theory includes the cultural/historical context during the theory's development, its key concepts and ideas, extensions of the theory in contemporary work, an example showing a modification of the theory, an application of how the theory is used to inform practice, and an analysis of how the theory answers 6 basic questions that a human development theory should address. Each chapter includes an overview of the strengths and weaknesses of the theories to facilitate comparisons. Theories that have a clear lifespan focus, along with cases and examples that address issues across the lifespan, are included. The second edition features a new chapter on bioecological theory that highlights the increased use of this theory in the development of family, school, and community intervention programs. A new epilogue examines the same case via each of the ten theories, illustrating their similarities and differences and how these ideas cast a unique light on a common situation. New opening cases bring theory to life, along with narrative that links the case to the chapter's concepts, guiding questions that help students compare theoretical perspectives, critical thinking questions that focus on using the theory to interpret the case, and personal life experiences. Recommended resources extend students' understanding. More examples from various disciplines that address topics students are likely to encounter as professionals. A new glossary defines the boldfaced key terms. Enhanced website at www.psypress.com

9781848726673 that provides instructors with a test bank, Power points, discussion questions, and activities; additional cases with questions; teaching notes for using the book with various types of majors; and a conversion guide outlining changes to the new edition. For students, key terms with hot links to their definitions, chapter summaries and outlines, and additional resources for further study. Updated research and applications highlight the latest scientific developments. Ideal for advanced undergraduate or beginning graduate courses in theories of development, lifespan, or child development, taught in psychology, human development, family studies, education, and social work.

Toward the Practice of theory-based Instruction Anne McKeough, Judy Lee Lupart, 2013-05-13 This unique contribution to the field of education offers a comparative look at the application of cognitive theory to instruction. Six leading researchers representing the three theoretical positions which guide the study of cognition: socio-cultural, information processing, and neo-Piagetian approaches, discuss their theories and present empirical evidence in support of cognitively based instructional practice. An introductory chapter describes the basic tenets of each tradition and its general educational posture, and a concluding chapter compares the contributors' views and draws implications for key educational issues. These
