Role of Plantation Crops in Agriculture Development Somu Giriappa, 2022 Plantation crops have been traditional export earners but their importance declined when industrial and engineering goods become major export products Interest in them was revived through new technology and marketing methods Plantation crop development is another way of containing the environmental deterioration caused by the modern agro systems Plantation and forestry could go hand in hand and could develop what is called a forestry plantation system Plantation development if it is in wasteland could propagate mixed crop species along with soil conservation and linkage with other sectors thus improving the role of plantation crops Thous coconut and arecanut are classified as palms an attempt is made in this study to include them and study some other plantation crops like cashewnut to the development of agricultural and the rural sector in the particular region The study is divided into two parts Part I comprising coconut arecanut and Part II Cashewnut Soil Fertility Decline in the Tropics Alfred E. Hartemink, 2003 Wide coverage of soils and perennial cropping systems in the tropics Synthesis of decades of research Challenges assumptions on the benefits of plantations for soil fertility It is generally assumed that soil fertility decline is widespread in the tropics and that this is largely associated with annual cropping and subsistence farming In contrast perennial plant cover as in plantation agriculture provides better protection for the soil This book reviews these concepts focusing on soil chemical changes under different land use systems in the tropics These include perennial crops annual crops and forest plantations Two case studies on sisal plantations in Tanzania and sugar cane in Papua New Guinea

are presented for detailed analysis The author demonstrates that soil fertility decline is also a problem on plantations
