Thermal Processes in Welding Victor A. Karkhin, 2019-05-15 This book describes and systemizes analytical and numerical solutions for a broad range of instantaneous and continuous stationary and moving concentrated and distributed 1D 2D and 3D heat sources in semi infinite bodies thick plane layers thin plates and cylinders under various boundary conditions The analytical solutions were mainly obtained by the superimposing principle for various parts of the proposed 1D 2D and 3D heat sources and based on the assumption that only heat conduction plays a major role in the thermal analysis of welds Other complex effects of heat transfer in weld phenomena are incorporated in the solutions by means of various geometrical and energetic parameters of the heat source The book is divided into 13 chapters Chapter 1 briefly reviews various welding processes and the energy characteristics of welding heat sources while Chapter 2 covers the main thermophysical properties

of the most commonly used alloys Chapter 3 describes the physical fundamentals of heat conduction during welding and Chapter 4 introduces several useful methods for solving the problem of heat conduction in welding Chapters 5 and 6 focus on the derivation of analytical solutions for many types of heat sources in semi infinite bodies thick plane layers thin plates and cylinders under various boundary conditions The heat sources can be instantaneous or continuous stationary or moving concentrated or distributed 1D 2D or 3D In Chapter 7 the temperature field under programmed heat input pulsed power sources and weaving sources is analyzed In turn Chapters 8 and 9 cover the thermal cycle melting and solidification of the base metal Heating and melting of filler metal are considered in Chapter 10 Chapter 11 addresses the formulation and solution of inverse heat conduction problems using zero first and second order algorithms while Chapter 12 focuses on applying the solutions developed here to the optimization of welding conditions In addition case studies confirm the usefulness and feasibility of the respective solutions Lastly Chapter 13 demonstrates the prediction of local microstructure and mechanical properties of welded joint metals while taking into account their thermal cycle The book is intended for all researches welding engineers mechanical design engineers research engineers and postgraduate students who deal with problems such as microstructure modeling of welds analysis of the mechanical properties of welded metals weldability residual stresses and distortions optimization of welding and allied processes prewelding heating cladding thermal cutting additive technologies etc It also offers a useful reference guide for software engineers who are interested in writing application software for simulating welding processes microstructure modeling residual stress analysis of welds and for robotic welding control systems

Hot Cracking Phenomena in Welds Thomas Böllinghaus, Horst Herold, 2005-10-20

Although the avoidance of hot cracking still represents a major topic in modern fabrication welding components the phenomena have not yet been fully understood Through the 20 individual contributions from experts all over the world the present state of knowledge about hot cracking during welding is defined and the subject is approached from four different viewpoints The first chapter provides an overview of the various hot cracking phenomena Different mechanisms of solidification cracking proposed in the past decades are summarized and new insight is particularly given into the mechanism of ductility dip cracking The effects of different alloying elements on the hot cracking resistance of various materials are shown in the second chapter and as a special metallurgical effect the initiation of stress corrosion cracking at hot cracks has been highlighted The third chapter outlines how numerical analyses and other modelling techniques can be utilized to

describe hot cracking phenomena and how such results might contribute to the explanation of the mechanisms Various hot cracking test procedures are presented in the final chapter with a special emphasis on standardization For the engineering and natural scientists in research and development the book provides both new insight and a comprehensive overview of hot cracking phenomena in welds The contributions additionally give numerous individual solutions and helpful advice for international welding engineers to avoid hot cracking in practice Furthermore it represents a very helpful tool for upper level metallurgical and mechanical engineering students

Hot Cracking Phenomena in Welds II Thomas Böllinghaus,Horst Herold,Carl E. Cross,J C Lippold,2008-08-07 Failure of welded components can occur during service as well as during fabrication Most common analyses of the resistance of welded components against failure are targeted at crack avoidance Such evaluations are increasingly carried out by modern weldability studies i e considering interactions between the selected base and filler materials structural design and welding process Such weldability investigations are particularly targeted to prevent hot cracking as one of the most common cracking phenomena occurring during weld fabrication To provide an international information and discussion platform to combat hot cracking an international workshop on Hot Cracking Phenomena in Welds has been created based on an initiative of the Institute for Materials and Joining Technology at the Otto von Guericke University in Magdeburg and the Division V 5 Safety of Joined Components at the Federal Institute for Materials Research and Testing BAM in Berlin Germany The first workshop

was organized in Berlin under the topics mechanisms and phenomena metallurgy and materials modelling and simulations as well as testing and standardization It consisted of 20 individual contributions from eight countries which were compiled in a book that found a very ready market not only in the welding community As a consequence of increasing interest it has been decided to establish the Workshop on Hot Cracking Phenomena in Welds as a regular event every three years embedded in the International Institute of Welding IIW Attached to the IIW Commission IX and II Spring intermediate meetings the second workshop was organized in March 2007
