Negotiating Knowledge in Early Modern Empires L. Kontler, A. Romano, S. Sebastiani, B. Török, 2014-12-17 This volume takes a decentered look at early modern empires and rejects the center periphery divide With an unconventional geographical set of cases including the Holy Roman Empire the Habsburg Iberian French and British empires as well as China contributors seize the spatial dynamics of the scientific enterprise

Beyond the Science Wars Ullica Christina Olofsdotter Segerstråle, Ullica Segerstråle, Ullica Christina Olofsdotter Segerstråle, 2000-08-03 Contextualizes the Science Wars from interdisciplinary sociological historical scientific political and cultural perspectives

Technical Fouls John Kurt Jacobsen, 2018-02-07 What is it that shapes the direction of technological progress in advanced industrial societies Is it science Technology itself Or is it something even more powerful and all encompassing like power or money or politics John Kurt Jacobsen addresses this topic by investigating how contemporary democratic capitalist states govern the development and deployment of their scientific and technological resources He examines the interaction of ideology profits and power and their combined effect upon technology policy in democracies The social function of science has been a contentious area of scholarly study throughout the second half of the twentieth century Although the book focuses mainly on the United States for the sake of instructive comparison it also studies technological development of other societies including the former Soviet Union and China Some competing accounts of technical change across the borders include laissez faire cultural and neo Marxist markets In fact with regard to laissez faire markets even to inquire if science has a social function is to deviate from the appropriate images of economic development What is always politically at stake is who will rule the next stage in production due to each swing in technology which will in turn be associated with a new structure of control Most recently the microchip revolution and cyberspace are the most highly publicized candidates for the next upswing in technology and thus the next new structure of control The explanatory focus of the book is on ideology or on ideas about how technology works and should work and the three key areas of policy contention discussed are industrial development military uses and the environment Students and scholars of science technology and sociology should find this book useful in coming to terms with the fundamental questions underlying the development of technology today

The History of Science Britannica Educational Publishing, 2014-01-01 Today we have countless scientific laws and principles that help explain our observations of the natural world However this was not always the case Although individuals have long sought to understand their surroundings it was not until around 2500 BCE that scientific activity began to assume a more prominent place in civilizations around the world The journey from early investigation through the scientific revolution to the present day is chronicled in this absorbing volume Readers will learn how religion helped fuel early studies in astronomy how Stonehenge is

related to the Pythagorean theorem how the development of the scientific method affected the various branches of science the implications of the God particle and much more Shaping Tomorrow's World Elke Seefried, 2024-05-01 Shaping Tomorrow's World tells the crucial story of how futures studies developed in West Germany Europe the US and within global futures networks from the 1940s to the 1980s It charts the emergence of different approaches and thought styles within the field ranging from Cold War defense intellectuals such as Herman Kahn to critical peace activists like Robert Jungk Engaging with the challenges of the looming nuclear war the changing phases of the Cold War 1968 and the growing importance of both the Global South and environmentalism this book argues that futures scholars actively contributed to these processes of change This multiple award winning study combines national and transnational perspectives to present a unique history of envisioning forecasting and shaping the future *The Cambridge History of Science: Volume 4, Eighteenth-Century Science* David C. Lindberg, Roy Porter, Ronald L. Numbers, 2003-03-17 The fullest and most complete survey of the development of science in the eighteenth century **Michael Polanyi and His Generation** Mary Jo Nye, 2011-09-16 In *Michael Polanyi and His Generation* Mary Jo Nye investigates the role that Michael Polanyi and several of his contemporaries played in the emergence of the social turn in the philosophy of science This turn involved seeing science as a socially based enterprise that does not rely on empiricism and reason alone but on social communities behavioral norms and personal commitments Nye argues that the roots of the social turn are to be found in the scientific culture and political events of Europe in the 1930s when scientific intellectuals struggled to defend the universal status of scientific knowledge and to justify public support for science in an era of economic catastrophe Stalinism and Fascism and increased demands for applications of science to industry and social welfare At the center of this struggle was Polanyi who Nye contends was one of the first advocates of this new conception of science Nye reconstructs Polanyi's scientific and political milieu in Budapest Berlin and Manchester from the 1910s to the 1950s and explains how he and other natural scientists and social scientists of his generation including J D Bernal Ludwik Fleck Karl Mannheim and Robert K Merton and the next such as Thomas Kuhn forged a politically charged philosophy of science one that newly emphasized the social construction of science *Instrumentation Between Science, State and Industry* B. Joerges, T. Shinn, 2012-12-06 In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultra centrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more

familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional
