Conjoining Meanings Paul M. Pietroski, 2018 Paul M Pietroski presents an ambitious new account of human languages as generative procedures that respect substantive constraints He argues that meanings are neither concepts nor extensions and sentences do not have truth conditions meanings are composable instructions for how to access and assemble concepts of a special sort

Applied Logic: How,

What and Why László Pólos, M. Masuch, 2013-03-09 A selection of papers presented at the international conference Applied Logic Logic at Work held in Amsterdam in December 1992 Nowadays the term applied logic has a very wide meaning as numerous applications of logical methods in computer science formal linguistics and other fields testify Such applications are by no means restricted to the use of known logical techniques at its best applied logic involves a back and forth dialogue between logical theory and the problem domain The papers focus on the application of logic to the study of natural language in syntax semantics and pragmatics and the effect of these studies on the development of logic In the last decade the dynamic nature of natural language has been the most interesting challenge for logicians Dynamic semantics is here applied to new topics the dynamic approach is extended to syntax and several methodological issues in dynamic semantics are systematically investigated Other methodological issues in the formal studies of natural language are discussed such as the need for types modal operators and other logical operators in the formal framework Further articles address the scope of these methodological issues from other perspectives ranging from cognition to computation The volume presents papers that are interesting for graduate students and researchers in the field of logic philosophy of language formal semantics and pragmatics and computational linguistics

Coming to Our Senses Michael Devitt, 1996 Professor Devitt takes up one of the most important difficulties that must be faced by philosophical semantics namely the threat posed by holism

Quantum Theory and the Flight from Realism Christopher Norris, 2002-11-01 This book is a critical introduction to the long standing debate concerning the conceptual foundations of quantum mechanics and the problems it has posed for

physicists and philosophers from Einstein to the present Quantum theory has been a major influence on postmodernism and presents significant problems for realists Keeping his own realist position in check Christopher Norris subjects a wide range of key opponents and supporters of realism to a high and equal level of scrutiny With a characteristic combination of rigour and intellectual generosity he draws out the merits and weaknesses from opposing arguments In a sequence of closely argued chapters Norris examines the premises of orthodox quantum theory as developed most influentially by Bohr and Heisenberg and its impact on various philosophical developments These include the ideas developed by W V Quine Thomas Kuhn Michael Dummett Bas van Fraassen and Hilary Putnam In each case Norris argues these thinkers have been influenced by the orthodox construal of quantum mechanics as requiring drastic revision of principles which had hitherto defined the very nature of scientific method causal explanation and rational enquiry Putting the case for a realist approach which adheres to well tried scientific principles of causal reasoning and inference to the best explanation Christopher Norris clarifies these debates to a non specialist readership and scholars of philosophy science studies and the philosophy of science alike Quantum Theory and the Flight From Realism suggests that philosophical reflection can contribute to a better understanding of these crucial current issues

History, Historicity and Science Joseph Margolis, 2016-12-05 This fresh collection of essays questions how the historical process affects our conception of science including our understanding of its validity as well as our general conception of knowledge The essays in this book consider the philosophical labours spanning the work of Descartes Kant and Hegel still the philosophical basis of our modern understanding of science as well as recent selected philosophers and historians of science such as Kuhn and Feyerabend Themes raised include the philosophical basis for the validity of science the possibility of ever knowing the independent world as it truly is and the intelligibility of construing scientific knowledge as a historical Taken separately and together these essays provide a sustained analysis of scientific claims to objective standing the historicity of thought and inquiry They point toward unfinished philosophical business and the need for a new beginning

Expressivism, Pragmatism and Representationalism Huw Price, Simon Blackburn, Robert Brandom, Paul Horwich, Michael Williams, 2013-05-16 This volume presents Price's distinctive version of the traditional representationalism naturalism combination with commentary by four other major figures

Quantification: Transcending Beyond Frege's Boundaries Aleksy Molczanow, 2012-03-02 In his attempt to give an answer to the question of what constitutes real knowledge Kant steers a middle course between empiricism and rationalism True knowledge refers to a given empirical reality but true knowledge has to be understood as necessary as well and so consequently must be a priori Both demands can only be reconciled if synthetic a priori judgments are possible To ground this possibility Kant develops his transcendental logic In Frege's program of providing a logicistic basis for true knowledge the same problem is at issue his logicist solution places the quantifier into the position of the basic element connected to the truth of a proposition As the basic element of a theory of logic it refers at the same time to something in reality Molczanow argues that Frege's program

fails because it does not pay sufficient attention to Kant's transcendental logic. Frege interprets synthetic a priori judgments as ultimately analytic and thus falls back onto a Leibnizian rationalism thereby ignoring Kant's middle course. Under the title of the transcendental analytic of quantification, Moćzanow discusses Frege's concept of quantification. For Frege, the proper analysis of number words and the categories of quantity raises problems which can only be solved according to Moćzanow with the help of Kant's transcendental logic. Moćzanow's book thus deserves its place in the series Critical Studies in German Idealism because it provides a further elaboration of Kant's transcendental logic by bringing it into conversation with contemporary logic. The result is a new conception of the nature of quantification which speaks to our time.
