Regenerative Design For Sustainable Development:

Regenerative Design for Sustainable Development John Tillman Lyle, 1996-11-08 Landscape Architecture
Regenerative Design for Sustainable Development Winner 1994 Merit Award for Communications American Society of Landscape Architects
Regenerative Design for Sustainable Development is nothing less than a user's manual for planet Earth that integrates the principles of ecological design with practical realities better than anything I've read. John Lyle has written the best book now available on the theory and practice of sustainability: essential reading for natural resource professionals, architects, planners, educators, environmentalists, and the general public. David W. Orr, Professor and Chair, Environmental Studies Program, Oberlin College.
John Lyle has written a splendid book, *Regenerative Design for Sustainable Development*. It is perfectly topical; it is committed to the unity of art and science, design and planning, man and nature. It is itself exemplary, and it is a repository of exemplary adaptations. It has carried the environmental movement to a new threshold of ecological planning and design. It should be widely read and employed. Ian L. McHarg, FASLA.
In these times of widespread urban stress and regional disruption, the cogent thoughts of John Tillman Lyle on sustainable cities are on target and highly constructive. They are a must reading for planning professionals and all concerned citizens. John Ormsbee Simonds, FASLA.
More designers need to broaden their horizons in the way John Lyle has put forth in this book. In general, there are far too few landscape architects or architects who have any working procedure that approximates what sustainable design entails. This book provides important historical background and contemporary experience to help guide the way. Pliny Fisk III, Center for Maximum Potential Building Systems.
From the despoliation of our rivers and lakes by industrial runoff to the destruction of our atmosphere by sulphur emissions and CFCs, production cycles based on a one-way flow of materials and energy have pushed us to the brink of environmental collapse. It is time for a change, and in this groundbreaking book, John Tillman Lyle offers us a blueprint for implementing that change. This book provides civil engineers, architects, landscape development planners, and others with practical, realistic approaches to reversing this deadly course. Throughout, the emphasis is on proven regenerative practices for water use, land use, energy use, and building design. Most importantly, it provides ways to reestablish connections between people and nature, between art and science, and between technology and daily life.

Regenerative-Adaptive Design for Sustainable Development Phillip B. Roös, 2020-09-15
In this book, the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an adaptive pattern language that re-establishes our wholeness with nature and considers the vulnerabilities of a changing landscape. The book examines an integral approach to contemporary theories of planning and design that explores the human-nature relationship patterns in social and spatial interconnections between people and their natural environments. The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and

sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia The concluding chapters argues that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these The book is intended for practitioners and academic scholars with interest in sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation

Regenerative Development and Design Regenesi Group,2016-09-06 The evolution of sustainability with a practical framework for integration Regenerative Development and Design takes sustainability to the next level and provides a framework for incorporating regenerative design principles into your current process The Regenesi Group is a coalition of experienced design land use planning business and development professionals who represent the forefront of the movement in this book they explain what regenerative development is how and why it works and how you can incorporate the fundamental principles into your practice A clear focused framework shows you how to merge regenerative concepts with your existing work backed by numerous examples that guide practical application while illustrating regenerative design and development in action As the most comprehensive and systemic approach to regenerative development this book is a must have resource for architects planners and designers seeking the next step in sustainability Regenerative design and development positions humans as co creative and mutually evolving participants in an ecosystem not just a built environment This book describes how to bring that focus to your design from the earliest stages Understand the fundamentals of regenerative design and development Learn how regenerative development contributes to sustainability Integrate regenerative development concepts into practice Examine sample designs that embody the regenerative concept To create a design with true sustainability considerations must extend far beyond siting materials and efficiency Designers must look at the place it s inhabitants and the purpose the whole living ecosystem and proceed with their work from that more humbling perspective The finished product should itself be an ecosystem and sustainable economy which is the root of the regenerative development approach Sustainability has evolved and the designer s responsibility has increased in kind Regenerative Development and Design provides an authoritative resource for those ready to take the next step forward

Synergistic Design of Sustainable Built Environments Chitrarekha Kabre, 2020-11-15 Synergistic Design of Sustainable Built Environments introduces and illustrates a novel systems approach that fosters both design excellence and a leap toward a more biocentric ecologically sustainable design paradigm The book provides a deeper understanding of the theories and principles of biocentric design and offers detailed descriptions of the synergistic design process of integrating theories and principles into practice It also presents extensive thermal and visual built environment design strategies along with qualitative and quantitative information that designers can use to generate feasible solutions in response to varying climate and occupant comfort Features Examines the principles and practices of the synergistic design a fusion of anthropocentric and biocentric of sustainable built environments and how they relate to practical applications Presents climatic data and its analysis along with sun path diagrams for numerous cities to aid in the design of sustainable built environments in multiple regional contexts Includes numerous case studies of sustainable built environments in varying climatic zones Explains how renewable energy solar wind biomass geothermal hydro fuel cells can be successfully integrated in the built environment This forward thinking and highly illustrated book will be an invaluable reference to all those concerned with sustainable built environments and related architectural issues

Regenerative by Design David Cheshire, 2024-10-01 How do we design cities and buildings that metabolise use living materials and are net positive that give back more to the planet than they take Our cities and buildings are a drain on the planet requiring huge amounts of resources and tracts of land to support their needs and destroying biodiversity in the process The idea of living regenerative buildings is gaining ground buildings that give back more than they take providing habitats ecosystems services e g clean water clean air locally grown food and

putting humans back in touch with the natural world The climate and biodiversity crisis has driven organisations to set ambitious net zero carbon and ESG targets however many are struggling to see how to achieve them and often doing the same thing but expecting a different result This book sets out the regenerative building agenda and design principles showing how buildings towns and cities could start to have a positive impact on our planet providing ecosystems services and living within the means afforded by the site

Carbon-Neutral Architectural Design Pablo M. La Roche,2024-05-31 The energy used to build and operate buildings is a significant source of greenhouse gas emissions While it is possible to reduce emissions through low carbon design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive cooling and heating strategies This new revised edition is updated throughout and includes a new section on embodied carbon and new chapters on daylighting and nature based cooling Features Adds new chapters on daylighting and nature based cooling with numerous updates throughout the rest of the chapters Presents strategies illustrated with examples for new construction and existing buildings to reduce energy consumption and reduce emissions Explains the origins of CO2 emissions associated with the operation and fabrication of buildings supplying water disposing of waste from the building and proposes strategies to reduce them Covers carbon calculations thermal comfort indigenous technology climate responsive design passive cooling and heating solar design air flow analysis daylighting building simulation and microclimate design with abundant examples Examines siting location to design buildings that adapt and mitigate their effect on climate change

Ecologies Design Maibritt Pedersen Zari,Peter Connolly,Mark Southcombe,2020-07-07 The notion of ecology has become central to contemporary design discourse This reflects contemporary concerns for our planet and a new understanding of the primary entanglement of the human species with the rest of the world The use of the term ecology with design tends to refer to how to integrate ecologies into design and cities and be understood in a biologically scientific and technical sense In practice this scientific technical knowledge tends to be only loosely employed The notion of ecology is also often used metaphorically in relation to the social use of space and cities This book argues that what it calls the biological and social senses of ecology are both important and require distinctly different types of knowledge and practice It proposes that science needs to be taken much more seriously in biological ecologies and that social ecologies can now be understood non metaphorically as assemblages Furthermore this book argues that design practice itself can be understood much more rigorously productively and relevantly if understood ecologically The plural term ecologies design refers to these three types of ecological design This book is unique in bringing these three perspectives on ecological design together in one place It is significant in proposing that a strong sense of ecologies design practice will only follow from the interconnection of these three types of practice Ecologies Design brings together leading

international experts and relevant case studies in the form of edited research essays case studies and project work It provides an overarching critique of current ecologically oriented approaches and offers evidence and exploration of emerging and effective methods techniques and concepts It will be of great interest to academics professionals and students in the built environment disciplines

Design Resilience in Asia Oscar Carracedo García-Villalba, Mia M. Bennett, 2022-03-25 The book is organized according to seven inspirations seven ideas and presents a collection of theoretical essays and a set of provocative and innovative solutions to design plan and build urban resilience in uncertain and unpredictable scenarios Led by the National University of Singapore School of Design and Environment presents the research by design results of four consecutive years in four different countries China Philippines Indonesia and Thailand responding to the current challenge of building more resilient cities in front of impacts of climate change such as coastal and river flooding water and air pollution water scarcity urban heat island effect aquifer depletion or subsidence The book brings together the work of highly reputed academics professionals and scholars from 20 universities worldwide with the aim of serving as a guide for mitigating and adapting to the effects of climate change and more specifically to reinstating the environmental qualities of our cities through carbon neutral or carbon net positive urban designs and plans
