Associative Learning For A Robot Intelligence John H Andrae, 1998-09-22 The explanation of brain functioning in terms of the association of ideas has been popular since the 17th century Recently however the process of association has been dismissed as computationally inadequate by prominent cognitive scientists In this book a sharper definition of the term association is used to revive the process by showing that associative learning can indeed be computationally powerful Within an appropriate organization associative learning can be embodied in a robot to realize a human like intelligence which sets

its own goals exhibits unique unformalizable behaviour and has no hidden homunculi Some believe that artificial intelligence is undergoing a paradigm shift There are undoubtedly several competing ideas and ideals Neural networks and dynamic systems are offered as alternatives to the information processing and digital computer models of the brain One is asked to decide between symbolic and subsymbolic between algorithmic and nonalgorithmic and between information processing and interactive systems Even in the short distance travelled in this book associative learning is seen to embrace both sides of these dichotomies *Robot Intelligence* Honghai Liu,Dongbing Gu,Robert J. Howlett,Yonghuai Liu,2010-08-05 Robot intelligence has become a major focus of intelligent robotics Recent innovation in computational intelligence including fuzzy learning neural networks evolutionary computation and classical Artificial Intelligence provides sufficient theoretical and experimental foundations for enabling robots to undertake a variety of tasks with reasonable performance This book reflects the recent advances in the field from an advanced knowledge processing perspective there have been attempts to solve knowledge based information explosion constraints by integrating computational intelligence in the robotics context
