**Research and Development** Sbornik Statei,2013-04-17 How quickly the technological flavour of the month changes At the beginning of the 1980 s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession Those working at the time in the field of robotics stressed that robots themselves were only part of the solution Yet in many quarters the hype for the new technology apparently knew few bounds resulting inexorably in many industries painfully discovering for themselves a new realism closely followed by disillusionment In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate

**Robotics in Practice** Joseph F. Engelberger, 2012-12-06

THE REAL THING by Isaac Asimov Back in 1939 when I was still a teenager I began to write and publish a series of stories about robots which for the first time in science fiction were pictured as having been deliberately engineered to do their job safely They were not intended to be creaky Gothic menaces nor outlets for mawkish sentiment They were simply well designed machines Beginning in 1942 I crystallized this notion in what I called The Three Laws of Robotics and in 1950 nine of my robot stories were collected into a book I Robot I did not at that time seriously believe that I would live to see robots in action and robotics becoming a booming industry Yet here we are better yet I am alive to see it But then why shouldn't they be with us Robots fulfil an important role in industry They do simple and repetitive jobs more steadily more reliably and more uncomplainingly than a human being could or should Does a robot displace a human being Certainly but he does so at a job that simply because a robot can do it is beneath the dignity of a human being a job that is no more than mindless drudgery Better and more human jobs can be found for human beings and should
