Applied Hydrogeology of Fractured Rocks B.B.S. Singhal †, R.P. Gupta, 2013-11-11 Hydrology is a topical and growing subject as the earth's water resources become scarcer and more vulnerable Although more than half the surface area of continents is covered with hard fractured rocks there has until now been no single book available dealing specifically with fractured rock hydrogeology This book deals comprehensively with the fundamental principles for understanding these rocks as well as with exploration techniques and assessment It also provides in depth discussion of structural mapping remote sensing geophysical exploration GIS field hydraulic testing groundwater quality and contamination geothermal reservoirs and resources assessment and management Hydrogeological aspects of various lithology groups including crystalline rocks volcanic rocks carbonate rocks and clastic formations are dealt with separately using and discussing examples from all over the world Applied Hydrogeology of Fractured Rocks will be an invaluable reference source for postgraduate students researchers exploration scientists and engineers engaged in the field of groundwater development in fractured rock areas

Numerical Methods in Geotechnical Engineering IX, Volume 1 Manuel de Matos Fernandes, 2018-06-22 NUMGE 2018 is the ninth in a series of conferences on Numerical Methods in Geotechnical Engineering organized by the ERTC7 under the auspices of the International Society for Soil Mechanics and Geotechnical Engineering ISSMGE The first conference was held

in 1986 in Stuttgart Germany and the series continued every four years 1990 Santander Spain 1994 Manchester United Kingdom 1998 Udine Italy 2002 Paris France 2006 Graz Austria 2010 Trondheim Norway 2014 Delft The Netherlands The conference provides a forum for exchange of ideas and discussion on topics related to numerical modelling in geotechnical engineering Both senior and young researchers as well as scientists and engineers from Europe and overseas are invited to attend this conference to share and exchange their knowledge and experiences This work is the first volume of NUMGE 2018

Gas Generation and Migration in Deep Geological Radioactive Waste Repositories R.P. Shaw ,2015-06-11 Understanding the behaviour of gases in the context of radioactive waste disposal is a fundamental requirement in developing a safety case for the disposal of radioactive waste Of particular importance are the long term performance of bentonite buffers and cement based backfill materials that may be used to encapsulate and surround the waste in a repository and the behaviour of plastic clays indurated mudrocks and crystalline formations that may be the host rocks for a repository The EC Euratom programme funded project FORGE has provided new insights into the processes and mechanisms governing gas generation and migration with the aim of reducing uncertainty This volume brings together papers on aspects of this topic arising from both the FORGE project and work undertaken elsewhere This has been achieved by the acquisition of new experimental data coupled with modelling through a series of laboratory and field scale experiments performed at a number of underground research laboratories throughout Europe

The Handbook of Groundwater Engineering Jacques W. Delleur,2006-11-16 A complete treatment of the theory and practice of groundwater engineering The Handbook of Groundwater Engineering Second Edition provides a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones covers the production of groundwater and the remediation of contaminated groundwater

Super-Deep Continental Drilling and Deep Geophysical Sounding Karl Fuchs,Yevgeny A. Kozlovsky,Anatoly I. Krivtsov,Mark D. Zoback,2012-12-06 The articles in this volume were selected from a series of reports delivered in the Soviet Union at Yaroslavl during the International Seminar Super deep drilling and deep geophysical research which was organized and held in August 1988 by the Ministry of Geology of the USSR jointly with the Inter Union Commission on the Lithosphere One of the most important problems of modern geology is the state and prospects of further development of deep continental structure investigations was discussed at the seminar with the participation of 245 scientists and specialists from 19 countries At the plenary and sectional meetings of the seminar 83 reports were delivered discussions on the most interesting problems were organized the exchange of ideas between the leading scientists a round table took place in discussion The distinctive feature of the present collection of articles is the wide scope of the investigation of the Earth's crust The reports elucidate such subjects of world importance as 1 achievements in implementation of major scientific programs investigating deep Earth structure and plans for their further materialization 2 theoretical problems of carrying out geological geophysical explorations and drilling operations and 3 new approaches to the

study of the Earth's interior The results of deep investigations of individual countries and organizations are considered and concrete technical elaboration methods of work execution etc are discussed Transactions of the Geological Society of London: S.2: Vol. 1-5, 1811 *Mining American*, 1912 *Mining and Industrial Reporter*, 1912 *ERDA Energy Research Abstracts*, 1987 **Geotechnics in the African Environment, volume 1** Geoffrey E. Blight, 2022-05-12 Proceedings of the 10th Regional Conference for Africa on Soil Mechanics and Foundation Engineering and the 3rd International Conference on Tropical and Residual Soils held in Maseru Lesotho September 1991 are contained in two volumes The papers address geotechnical problems peculiar to Africa and engineering solutions for local problems as well as data on the properties of African soils *The Handbook of Groundwater Engineering, Third Edition* John H. Cushman, Daniel M. Tartakovsky, 2016-11-25 This new edition adds several new chapters and is thoroughly updated to include data on new topics such as hydraulic fracturing CO₂ sequestration sustainable groundwater management and more Providing a complete treatment of the theory and practice of groundwater engineering this new handbook also presents a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones covers the protection of groundwater and the remediation of contaminated groundwater Subsurface Space Magnus Bergman, 2013-09-17 Subsurface Space Volume 1 Environmental Protection Low Cost Storage Energy Savings covers the proceedings of the International Symposium Rockstore 80 held in Stockholm Sweden on June 23-27 1980 The book focuses on the potential of subsurface space as a resource The selection first elaborates on the future growth of large cities as related to the potential of subsurface use underground transport in urban areas underground systems for public utilities and multiple use of civil defense installations The book then explores warehousing concepts underground storage of oil and gas products obstacles to subsurface storage of oil and possibilities for archives and other safe storage underground The manuscript examines environmental and other insurance aspects of underground storage projects grouting of tunnels in order to avoid detrimental groundwater lowering engineering geological problems of cellars and caverns under historical centers of towns and growth and planning of the use of subsurface space under London England The book also takes a look at the microfractographic study of heated and non heated stripa granite international investigations of geologic media for the disposal of radioactive wastes and assessment of the future evolution of geologic systems intended for the development of a nuclear waste repository The selection is a valuable reference for scientists and researchers wanting to explore the potential of subsurface space *Analysis of the Deformation of Saturated Porous Rocks in Compression* Francois Henri Cornet, 1975 An investigation of the mechanical influence of interstitial fluids on the deformation process of saturated rocks has been conducted to determine the domain of validity of previously published theories Equilibrium equations for fluid saturated materials in which the fluid is at rest or flows according to Darcy's law were derived For this purpose a new characterization of porosity has been proposed for analyzing porosity variation within a rock mass This derivation indicates

that the bulk material solid plus fluid can be represented by an equivalent homogeneous continuum for which the mass density and the stress tensor at any point depend upon average stresses and average densities of both the solid matrix and the saturating fluid as well as upon the surface and the volume porosity Geotechnical Engineering Sayed Hemeda, Mehmet Barış Can Ülker, 2020-07-15 This book discusses contemporary issues related to soil mechanics and foundation engineering in earthworks which are critical components in construction projects and often require detailed management techniques and unique solutions to address failures and implement remedial measures The geotechnical engineering community continues to improve the classical testing techniques for measuring critical properties of soils and rocks including stress wave based non destructive testing methods as well as methods used to improve shallow and deep foundation design To minimize failure during construction contemporary issues and related data may reveal useful lessons to improve project management and minimize economic losses This book focuses on these aspects using appropriate methods in a rather simple manner It also touches upon many interesting topics in soil mechanics and modern geotechnical engineering practice such as geotechnical earthquake engineering principals in foundation design slope stability analysis modeling in geomechanics offshore geotechnics and geotechnical engineering perspective in the preservation of historical buildings and archeological sites A total of seven chapters are included in the book Professional Paper ,1930 Energy Research Abstracts ,1987
