**Romantic Science** Noah Heringman, 2012-02-01 Although romantic science may sound like a paradox much of the romance surrounding modern science the mad scientist the intuitive genius the utopian transformation of nature originated in the Romantic period Romantic Science traces the literary and cultural politics surrounding the formation of the modern scientific disciplines emerging from eighteenth century natural history Revealing how scientific concerns were literary concerns in the Romantic period the contributors uncover the vital role that new discoveries in earth plant and animal sciences played in the period s literary culture As Thomas Pennant put it in 1772 Natural History is at present the favourite science over all Europe and the progress which has been made in it will distinguish and characterise the eighteenth century in the annals of literature As they examine the social and literary ramifications of a particular branch or object of natural history the contributors to this volume historicize our present intellectual landscape by reimagining and redrawing the disciplinary boundaries between literature and science Contributors include Alan Bewell Rachel Crawford Noah Heringman Theresa M Kelley Amy Mae King Lydia H Liu Anne K Mellor Stuart Peterfreund and Catherine E Ross

**Modern Phylogenetic Comparative Methods and Their Application in Evolutionary Biology** László Zsolt Garamszegi, 2014-07-29 Phylogenetic comparative approaches are powerful analytical tools for making evolutionary inferences from interspecific data and phylogenies The phylogenetic toolkit available to evolutionary biologists is currently growing at an incredible speed but most methodological papers are published in the specialized statistical literature and many are incomprehensible for the user community This textbook provides an overview of several

newly developed phylogenetic comparative methods that allow to investigate a broad array of questions on how phenotypic characters evolve along the branches of phylogeny and how such mechanisms shape complex animal communities and interspecific interactions The individual chapters were written by the leading experts in the field and using a language that is accessible for practicing evolutionary biologists The authors carefully explain the philosophy behind different methodologies and provide pointers mostly using a dynamically developing online interface on how these methods can be implemented in practice These conceptual and practical materials are essential for expanding the qualification of both students and scientists but also offer a valuable resource for educators Another value of the book are the accompanying online resources available at <http://www.mpcm-evolution.com> where the authors post and permanently update practical materials to help embed methods into practice

*Romantic Rocks, Aesthetic Geology* Noah Heringman, 2011-02-23 Why are rocks and landforms so prominent in British Romantic poetry Why for example does Shelley choose a mountain as the locus of a voice to repeal large codes of fraud and woe Why does a cliff in the boat stealing episode of Wordsworth's *Prelude* chastise the young thief Why is petrification or stonifying in Blake's coinage the ultimate figure of dehumanization Noah Heringman maintains that British literary culture was fundamentally shaped by many of the same forces that created geology as a science in the period 1770-1820 He shows that landscape aesthetics the verbal and social idiom of landscape gardening natural history the scenic tour and other forms of outdoor improvement provided a shared vernacular for geology and Romanticism in their formative stages *Romantic Rocks, Aesthetic Geology* reexamines a wide range of eighteenth and nineteenth century poetry to discover its relationship to a broad cultural consensus on the nature and value of rocks and landforms Equally interested in the initial surge of curiosity about the earth and the ensuing process of specialization Heringman contributes to a new understanding of literature as a key forum for the modern reorganization of knowledge
