Astrofuturism De Witt Douglas Kilgore, 2010-08-03 *Astrofuturism Science Race and Visions of Utopia in Space* is the first full scale analysis of an aesthetic scientific and political movement that sought the amelioration of racial difference and social antagonisms through the conquest of space Drawing on the popular science writing and science fiction of an eclectic group of scientists engineers and popular writers De Witt Douglas Kilgore investigates how the American tradition of technological utopianism responded to the political upheavals of the twentieth century Founded in the imperial politics and utopian schemes of the nineteenth century *astrofuturism* envisions outer space as an endless frontier that offers solutions to the economic and political problems that dominate the modern world Its advocates use the conventions of technological and scientific conquest to consolidate or challenge the racial and gender hierarchies codified in narratives of exploration Because the icon of space carries both the imperatives of an imperial past and the democratic hopes of its erstwhile subjects its study exposes the ideals and contradictions endemic to American culture Kilgore argues that in the decades following the Second World War the subject of race became the most potent signifier of political crisis for the predominantly white and male ranks of *astrofuturism* In response to criticism inspired by the civil rights movement and the new left *astrofuturists* imagined space frontiers that could extend the reach of the human species and heal its historical wounds Their work both replicated dominant social presuppositions and supplied the resources necessary for the critical utopian projects that emerged from the antiracist socialist and feminist movements of the twentieth century This survey of diverse bodies of literature conveys the

dramatic and creative syntheses that astrofuturism envisions between people and machines social imperatives and political hope physical knowledge and technological power Bringing American studies utopian literature popular conceptions of race and gender and the cultural study of science and technology into dialogue Astrofuturism will provide scholars of American culture fans of science fiction and readers of science writing with fresh perspectives on both canonical and cutting edge astrofuturist visions

The Century of Space Science J.A. Bleeker, Johannes Geiss, M. Huber, 2001 The 20th century can truly be called the Century of Space Science for it was in the 20th century that the multidisciplinary study of space science as opposed to astronomy was conceived Today as we start a new century of discovery we are able to cast our perspective back in order to chronicle how the field began review how it developed and discuss how it reached its current levels We are able to overview the historical development and to put early discoveries in context to document our current understanding and to look forward to the coming century with some degree of optimism One of the most attractive features of this young discipline is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection The work is published in two large format volumes and contains colour images throughout It includes several appendices for example a basic chronology of the field and a complete list of every space science mission ever launched and is extensively and comprehensively indexed The scientific editorial team consists of Johan A M Bleeker of SRON The Netherlands Johannes Geiss of the International Space Science Institute Berne and Martin Huber of ESA and history consultant Arturo Russo of the University of Palermo Italy
