Role Of Nitric Oxide In Physiology And Pathophysiology:

The Role of Nitric Oxide in Physiology and Pathophysiology Hilary Koprowski, Hiroshi Maeda, 2012-12-06 Nitric Oxide NO an endogenous free radical has been shown recently to mediate several important biological effects It plays a neurotransmitter like role in vascular endothelium a second messenger role in N methyl D aspartate NMDA responsive neurons in the central nervous system CNS a neurotoxic role after its release from these neurons and a cytotoxic role after its release by macrophages This volume reviews among other topics the basic chemistry and physical properties of S nitrosothiols RS NO and their biochemical mechanisms of action NO synthase isozymes NO synthase structure mechanisms of NO synthesis regulation of NOS expression and posttranslational modification and mechanisms involving NO of CNS s damage in virus infections

Nitric Oxide in Pulmonary Processes Maria G. Belvisi, Jane A. Mitchell, 2012-12-06 Nitric oxide is an endogenously produced gas with a wide range of biological effects and has been implicated in many physiological and pathophysiological processes It is released by many cell types in various organs but is particularly important in the maintenance of normal lung function Nitric oxide in exhaled breath has been identified as a marker for lung disease in some patients Thus it is appropriate to consider the lung separately for the role and functioning of nitric oxide The authors identify key areas in the history biochemistry physiology pathophysiology immunology and clinical applications of nitric oxide in the lung The contents of this book will be of particular importance to scientists and clinicians with an interest in lung disease Moreover the authors encompass state of the art opinions of and rationale for the therapeutic potential of nitric oxide and its inhibitors

Biology and Pathology of Astrocyte-Neuron Interactions Sergey Fedoroff, Bernhard H.J. Juurlink, J. Ronald Doucette, 2013-06-29 This volume is made up of papers presented at the Second International Altschul Symposium Biology and Pathology of Astrocyte Neuron Interactions The symposium was held in Saskatoon Canada at the University of Saskatchewan in May 1992 in memory of Rudolf Altschul a graduate of the University of Prague and a pioneer in the fields of the biology of the vascular and nervous systems Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The Altschul Symposia were made possible by an endowment left by Anni

Altschul and by other contributions The symposia are held biennially One of the greatest challenges for present day scientists is to uncover the mechanisms of brain function Although cellular anatomy of the nervous system has already been well outlined and indeed was delineated by the beginning of the century experimental analysis of the function of the brain is relatively recent The framework of the brain is made up of stellate cells the astrocytes which are interconnected by means of their processes thus presenting a meshwork through which the neurons send their axons accompanied by oligodendrocytes Microglia are distributed throughout the brain

Pathobiology of Human Disease, 2014-08-01 Pathobiology of Human Disease bridges traditional morphologic and clinical pathology molecular pathology and the underlying basic science fields of cell biology genetics and molecular biology which have opened up a new era of research in pathology and underlie the molecular basis of human disease The work spans more than 48 different biological and medical fields in five basic sections Human Organ Systems Molecular Pathology Basic Mechanisms of Diseases Animal Models Other Model Systems Experimental Pathology Clinical Pathology Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers from research professionals to advanced undergraduate students Reviews quantitative advances in the imaging and molecular analysis of human tissue new microarray technologies for analysis of genetic and chromosomal alterations in normal and diseased cells and tissues and new transgenic models of human disease using conditional tissue specific gene targeting Articles link through to relevant virtual microscopy slides illustrating side by side presentation of Normal and Disease anatomy and histology images Fully annotated with many supplementary full color images graphs tables and video files linked to data sets and to live references enabling researchers to delve deeper and visualize solutions

Endothelial Modulation of Cardiac Function Malcolm J Lewis, Ajay M Shah, 2020-01-29 Paracrine and autocrine regulation of cardiac function by endothelial mediators is becoming important both physiologically and pathophysiologically This volume brings the researcher completely up to date with all aspects of endothelial regulation and cardiac function Acknowledged experts in each field have contributed making this work indispensable for researchers and of great interest to the clinical cardiologist The Endothelial Cell Research Series publishes significant reviews by experts in the field The individual volumes provide invaluable guides to researchers studying endothelial cells and are effective reference texts for anyone working in the general areas of vascular biology and neurotransmission Endothelium was originally considered to be an inert lining for the blood vessels but during the last fifteen years this view has had to be completely revised It is now accepted that the endothelium plays an important role in many diverse functions This volume concentrates on the effect of the endothelium on cardiac function It has been widely demonstrated that the endothelium exerts a paracrine influence on contraction of adjacent cardiac muscle through the release of several mediators such as endothelin and nitric oxide Recent studies also show that the effects of such mediators upon the heart are not limited to contraction alone

Mechanisms of Platelet Activation and Control Kalwant S. Authi, Steven P. Watson, Vijay V. Kakkar, 2012-12-06 Recent years have seen

tremendous advances in our understanding of the molecular mechanism of platelet activation All aspects of signal transduction in platelets from the identification of surface receptors G proteins phospholipases protein kinases and phosphatases intracellular receptors for inositol phosphates the Ca² regulatory machinery cytoskeletal constituents to the control mechanism employing cyclic nucleotides has seen an explosion of information regarding their importance and for each constituent in the family of molecules to which they belong This information has been of interest to researchers across a wide spectrum of disciplines including biochemists pharmacologists cell biologists and clinicians In April 1992 an International Symposium bearing the name of this volume was organised at the Thrombosis Research Institute to bring together scientists from across the world whose common interest was the study of platelet activation and its regulation We were particularly encouraged by the positive response from our speakers and the participants their detailed contributions and the very lively discussions that took place throughout the two days of the symposium Almost every aspect of signal transduction in human platelets was represented Of the invited speakers twelve were from Europe including the U K eight from North America and one from Japan This volume is a compilation of chapters submitted by the speakers and represents a concise but informative picture of the present knowledge of the mechanisms of platelet activation and control

Inflammatory Bowel Diseases G.N. Tytgat, J.F.W.M. Bartelsman, S.J.H. van Deventer, 1995-12-31 There is currently an explosive growth of basic and clinical research in inflammatory bowel diseases The extensive interest of the medical community in these diseases is largely explained by the devastating impact the illnesses have on the quality of life their high prevalence in the community and the fact that so many medical disciplines are involved in tackling the immensely complex studies on pathogenesis clinical expression and treatment possibilities The Falk Symposium No 85 held in The Hague the Netherlands 29 June 1 July 1995 brought together over 80 speakers and 1000 participants from all over the world Plenary sessions and workshops allowed the discussion of basic and clinical research enabling appropriate choices to be made Topics reflected areas of high current basic research interest clinical importance and actual or future treatment potential Audience An important work for all disciplines involved in research and therapy of inflammatory bowel diseases
