## **Rolling Contacts:**

Rolling Contacts T. A. Stolarski, S. Tobe, 2001 An important volume in the Tribology in Practice Series TIPS Rolling Contacts presents a general introduction to the fundamentals of rolling friction with the emphasis on important engineering applications of rolling contacts Rolling Friction is an age old engineering problem with friction and wear related problems resulting in enormous costs to industry world wide Rolling Contacts presents the fundamentals of rolling contacts of all types emphasizing important engineering applications including rolling bearings gears road tyre and rail wheel interactions cam tappet systems and roll forming of materials Procedures and techniques of analysis developed throughout the book enhance understanding of this complex subject and help to improve the engineer's ability to design and select rolling contacts for mechanical devices and systems CONTENTS INCLUDE Elements of surface contact of solids Fundamentals of rolling motion Dynamic characteristics of rolling motion Rolling contact bearing Rolling contacts in land locomotion Machine elements in rolling contact Non metallic rolling contacts Rolling Contacts will be invaluable to practising designers researchers and postgraduate students Engineering degree course students will also benefit from this book's thorough introduction to rolling contacts commonly used in practice

**Engineering Tribology** John Austin Williams, 2005-01-10 Engineering Tribology by John Williams of Cambridge University is an ideal textbook for a first tribology course and a reference for designers and researchers Engineering Tribology gives the reader interdisciplinary understanding of tribology including materials constraints Real design problems and solutions such as those for journal and rolling element bearings cams and followers and heavily loaded gear teeth elucidate concepts and motivate understanding This work integrates qualitative and quantitative material from a wide variety of disciplines including physics materials science surface and lubricant chemistry with traditional engineering approaches

**Method of Dimensionality Reduction in Contact Mechanics and Friction** Valentin L. Popov, Markus Heß, 2014-08-19 This book describes for the first time a simulation method for the fast calculation of contact properties and friction between rough surfaces in a complete form In contrast to existing simulation methods the method of dimensionality reduction MDR is based on the exact mapping of various types of three dimensional contact problems onto contacts of one dimensional foundations Within the confines of MDR not only are three dimensional systems reduced to one dimensional but also the resulting degrees of freedom are independent from another Therefore MDR results in an enormous reduction of the development time for the numerical implementation of contact problems as well as the direct computation time and can ultimately assume a similar role in tribology as FEM has in structure mechanics or CFD methods in hydrodynamics Furthermore it substantially simplifies analytical calculation and presents a sort of pocket book edition of the entirety contact

mechanics Measurements of the rheology of bodies in contact as well as their surface topography and adhesive properties are the inputs of the calculations In particular it is possible to capture the entire dynamics of a system beginning with the macroscopic dynamic contact calculation all the way down to the influence of roughness in a single numerical simulation model Accordingly MDR allows for the unification of the methods of solving contact problems on different scales The goals of this book are on the one hand to prove the applicability and reliability of the method and on the other hand to explain its extremely simple application to those interested

Kalker,2013-04-17 This book is intended for mechanicians engineering mathematicians and generally for theoretically inclined mechanical engineers It has its origin in my Master s Thesis J 957 which I wrote under the supervision of Professor Dr R Timman of the Delft TH and Dr Ir A D de Pater of Netherlands Railways I did not think that the surface of the problem had even been scratched so I joined de Pater who had by then become Professor in the Engineering Mechanics Lab of the Delft TH to write my Ph D Thesis on it This thesis 1967 was well received in railway circles which is due more to de Pater s untiring promotion than to its merits Still not satisfied I felt that I needed more mathematics and I joined Professor Timman s group as an Associate Professor This led to the present work Many thanks are due to G M L Gladwell who thoroughly polished style and contents of the manuscript Thanks are also due to my wife herself an engineering mathematician who read the manuscript through critically and made many helpful comments to G F M Braat who also read and criticised and in addition drew the figures together with J Schonewille to Ms A V M de Wit Ms M den Boef and Ms P c Wilting who typed the manuscript and to the Publishers who waited patiently Delft Rotterdam 17 July 1990 J J
