Mathematics Education As A Research Domain A Search For Identity:

Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska, Jeremy Kilpatrick, 2014-02-19 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives. That task is very difficult; however, refocusing curricula on fundamental concepts, producing new teaching materials, and designing teaching units based on mathematicians' common sense or on logic have not resulted in a better understanding of mathematics by more students. The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals, designs, and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally, politically, and economically justified institutions, namely schools. Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology, sociology, and mathematics. Psychological theories focus on the individual learner. Theories of sociology of education look at the general laws of curriculum development, the specifics of pedagogic discourse as opposed to scientific discourse in general, the different possible pedagogic relations between the teacher and the taught, and other general problems in the interface between education and society. Mathematics, aside from its theoretical contents, can be looked at from historical and epistemological points of view, clarifying the genetic development of its concepts, methods, and theories. This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts.

Handbook of International Research in Mathematics Education Lyn D. English, David Kirshner, 2010-04-02 The second edition continues the mission of bringing together important new mathematics education research that makes a difference in both theory and practice. It updates and extends the Handbook's original key themes and issues for international research in mathematics education for the 21st century, namely: priorities in international mathematics education research; lifelong, democratic access to powerful mathematical ideas; advances in research methodologies; influences of advanced technologies. Each of these themes is examined in terms of learners, teachers, and learning contexts, with theory development being an important component of all these aspects. This edition also examines other catalysts that have gained increased import in recent years, including a stronger focus on the teacher and teacher practice, a renewed interest in theory development, an increased focus on the mathematics needed in work place settings, and a proliferation of research designs and methodologies that have provided unprecedented opportunities for investigating and ultimately improving mathematical teaching and learning. This edition includes ten totally new chapters; all other chapters are thoroughly revised and updated. **Invited**

Critical Mathematics Education Paul Ernest, Bharath Sriraman, Nuala Ernest, 2016-01-01 Mathematics is traditionally seen as the most neutral of disciplines the furthest removed from the arguments and controversy of politics and social life However critical mathematics challenges these assumptions and actively attacks the idea that mathematics is pure objective and value neutral It argues that history society and politics have shaped mathematics not only through its applications and uses but also through molding its concepts methods and even mathematical truth and proof the very means of establishing truth Critical mathematics education also attacks the neutrality of the teaching and learning of mathematics showing how these are value laden activities indissolubly linked to social and political life Instead it argues that the values of openness dialogicality criticality towards received opinion empowerment of the learner and social political engagement and citizenship are necessary dimensions of the teaching and learning of mathematics if it is to contribute towards democracy and social justice This book draws together critical theoretic contributions on mathematics and mathematics education from leading researchers in the field Recurring themes include The natures of mathematics and critical mathematics education issues of epistemology and ethics Ideology the hegemony of mathematics ethnomathematics and real life education Capitalism globalization politics social class habitus citizenship and equity The book demonstrates the links between these themes and the discipline of mathematics and its critical teaching and learning The outcome is a groundbreaking collection unified by a shared concern with critical perspectives of mathematics and education and of the ways they impact on practice

Perspectives on Adults Learning Mathematics D. Coben, J. O'Donoghue, Gail E. FitzSimons, 2006-05-10 At a time when the importance of lifelong education is becoming recognised around the world this is the first book to explore an important but hitherto neglected area adult mathematics education This book is about adults learning mathematics wherever and in whatever circumstances they do so It brings together researchers

in the field and aims to lay the foundations for study and further research and practice in this fast developing area. It aims to situate research and practice in adults learning mathematics within the wider field of lifelong learning and lifelong education and to be accessible both to the specialist and to the general adult reader. The book features a comprehensive review of the field which sets the scene for sections on Perspectives on Research on Adults Learning Mathematics, Adults Mathematics Culture and Society, Adults Mathematics and Work, and Perspectives in Teaching Adults Mathematics. Topics covered include mathematics and common sense statistical literacy and numeracy, new theories on learning mathematics, mathematical competences for the workplace, ethnomathematics and the training of tutors.

Researching the Socio-Political Dimensions of Mathematics Education Paola Valero, Robyn Zevenbergen, 2006-04-11

Mathematics education research as a discipline is situated at the confluence of an array of diffuse seemingly incommensurable and radically divergent discourses. Research claims that have grown out of mathematics education are wide ranging and antagonistic rather than circumscribed by hidebound disciplinary frames. While there has never been a unified totalising discipline of knowledge labelled mathematics education research and while it has always been a contested terrain, it is fair to say that the master paradigm out of which this field has been generated has been that of cognitive psychology. Mainstream mathematics education knowledges refract the master discourse of psychology whereby cognition serves as the central privileged and defining concept, clearly delimits its possibilities for serving as a social tool of democratic transformation. The central point of departure of this new collection is that mathematics education research is insufficiently univocal to support the type of uncompromising interpretation that cognitive psychologists would bring to it. The hallmark contribution of this pathbreaking volume, edited by Paola Valero and Robyn Zevenbergen, is the paradigmatic shift the authors have effected in the field of mathematics education research, taking up a position at the faultline of socio cultural analysis and critical pedagogy.
