Mathematics Experiences For The Early Childhood Years:

Mathematics Experiences for the Early Childhood Years Linda Barron, 1979 **Supporting Mathematical Development In The Early Years** Pound, Linda, 2006-05-01 Review of the first edition All the major areas of early childhood maths teaching and learning are covered in this powerful book The book is also full of delightful stories It would be eminently suitable for beginning and trainee teachers but would also be helpful to all those concerned in early years settings All the relevant information is here based on a wealth of knowledge and experience TES Supporting Mathematical Development in the Early Years provides practical guidance for parents teachers and other early years workers who want to give children a good start in mathematical development Showing how competent children are as mathematicians from an early age the book offers an overview of young children s mathematical behaviour at home and in early years settings The book describes the content and the learning curriculum required to promote mathematical thinking including an examination of the relationship between mathematics and language learning and the role of other cross curricular aspects such as information and communications technology ICT It explores the role of staff in observing planning for and supporting children s learning by using a variety of strategies and makes suggestions for promoting effective partnerships between the parents or principal carers and early years staff The book also considers the importance of play and imagination to the development of abstract thought The second edition is comprehensively updated throughout and includes new material on Special Educational Needs the very early years the role of play the role of ICT and examples of outdoor play It is essential reading for early years teachers and students as well as parents who want to understand and develop their children s early mathematical learning

More Than Counting Sally Moomaw, Brenda Hieronymus, 2011-02-08 More than one hundred math activities for young children that incorporate early learning standards *Mathematics Learning in Early Childhood* National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-12-13 Early childhood mathematics is vitally important for young children s present and future educational success Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics Furthermore young children enjoy their early informal experiences with mathematics Unfortunately many children s potential in mathematics is not fully realized especially those children who are economically disadvantaged This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities Improvements in early childhood mathematics education can provide young children with the foundation for school success Relying on a comprehensive review of the research *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children s early mathematics education explores the extent to which they are currently being incorporated in early childhood settings and identifies the changes needed to improve the quality of mathematics experiences for young children This book serves as a

call to action to improve the state of early childhood mathematics It will be especially useful for policy makers and practitioners those who work directly with children and their families in shaping the policies that affect the education of young children

Early Childhood Education Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity Because this is a crucial part of children's makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience

policies that affect the education of young children **Mathematics in Early Childhood** Oliver Thiel, Elena Severina, Bob Perry, 2020-11-05 Structured around Bishop's six fundamental mathematical activities this book brings together examples of mathematics education from a range of countries to help readers broaden their view on maths and its interrelationship to other aspects of life. Considering different educational traditions and diverse contexts and illustrating theory through the use of real life vignettes throughout this book encourages readers to review, reflect on and critique their own practice when conducting activities on explaining, counting, measuring, locating, designing and playing. Aimed at early childhood educators and practitioners looking to improve the mathematics learning experience for all their students this practical and accessible guide provides the knowledge and tools to help every child. *Math at Their Own Pace* Greg Nelson, 2007-09-04 As a dedicated early childhood teacher you aim to provide an environment where students make new discoveries and test their limits. But when it comes to teaching developmentally appropriate math you might welcome help from an expert with teaching experience based on the latest research on math learning. *Math at Their Own Pace* offers a series of predesigned, inexpensive activities that you can create and place on the shelf for children to use when they are developmentally ready and interested. This child-directed approach provides a broad range of hands-on math experiences that will help your students learn to solve problems creatively. *Math at Their Own Pace* covers awareness of stable quantities and emergence of counting skills, recognizing and writing the numerals 0 through 9, counting to 10 and beyond, emergence of whole-part awareness. Greg Nelson PhD is a professor of early childhood education at Bridgewater State College in Bridgewater, Massachusetts and has been a lead teacher in a Montessori program. He holds a PhD in educational psychology, human development and cognition.

Mathematics Education in the Early Years Tamsin Meaney, Ola Helenius, Maria L. Johansson, Troels Lange, Anna Wernberg, 2016-01-22 This book presents chapters based on papers presented at the second POEM conference on early mathematics learning. These chapters broaden the discussion about mathematics education in early childhood by exploring the debate about construction versus instruction. Specific sections investigate the teaching and learning of mathematical processes and mathematical content, early childhood teacher development, transitions for young children between home and preschool, between home and school, and between preschool and school. The chapters use a range of innovative theoretical and methodological approaches which will form an interesting basis for future research in this area. **Engaging Families as Children's First Mathematics Educators** Sivan Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children's mathematics learning. Bringing together international experts, researchers and scholars it proposes a framework for engaging with and supporting parents, including those who are less aware of the crucial development of children's mathematical skills in the early years. Focusing on mathematics learning from birth to 5 years, the book's underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of

mathematics learning including those families who seem alienated from education services Specifically the respective chapters present a framework for understanding children s early mathematical development and the important role of families in this regard They describe effective strategies for engaging families in their children s mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children s mathematical learning and their development of positive attitudes towards learning In closing hurdles and opportunities within the systems surrounding family engagement are addressed
