**Mathability** Michael Cain, 2021-09-03 Mathability gives students the experience and ability to analyze and solve real life mathematical problems and explain their methods for arriving at the solution Mathability is an excellent resource for preparing students for the performance tasks of standards based tests The six units in this book each have 10 problems that deal with a variety of real life situations such as those at a construction site on vacation in a business and at home The open ended problems let students hone their skills in geometry probability percentages use of charts algebra number relations operations money and decimals Open ended performance tasks have become a mainstay of standards based testing It is one of the tasks that most students perform at below proficiency level Much of this low performance is due to a student's lack of experience with writing explanations of the mathematics that made it possible to solve the problem Mathability presents a systematic approach that will lead students to proficiency Within each unit this book provides four different levels of problems The Step by Step Level leads a student through the problem and provides a format for presenting their answers The Prompted Level provides the format for presenting the solution and hints on how to solve the problem The Independent Level allows students to solve and explain their answers on their own and the Challenge Level problems present a venue for gifted and talented students to push their skills to a higher level Grades 5-8

**Mathematics and the Real World** Zvi Artstein, 2014 In this accessible and illuminating study of how the science of mathematics developed a veteran math researcher and educator looks at the ways in which our evolutionary makeup is both a help and a hindrance to the study of math Artstein chronicles the discovery of important mathematical connections between mathematics and the real world from ancient times to the present The author then describes some of the contemporary applications of mathematics in probability theory in the study of human behavior and in combination with computers which give mathematics unprecedented power The author concludes with an insightful discussion of why mathematics for most people is so frustrating He argues that the rigorous logical structure of math goes against the grain of our predisposed ways of thinking as shaped by evolution presumably because the talent needed to cope with logical mathematics gave the human race as a whole no evolutionary advantage With this in mind he offers ways to overcome these innate impediments in the teaching of math
