Performance Analysis of Manufacturing Systems Tayfur Altioğ, 2012-12-06 Manufacturing industries are devoted to producing high quality products in the most economical and timely manner Quality economics and time not only indicate the customer satisfaction level but also measure the manufacturing performance of a company Today's manufacturing environments are becoming more and more complex

flexible and information intensive Companies invest into the information technologies such as computers communication networks sensors actuators and other equipment that give them an abundance of information about their materials and resources In the face of global competition a manufacturing company s survival is becoming more dependent on how best this influx of information is utilized Consequently there evolves a great need for sophisticated tools of performance analysis that use this information to help decision makers in choosing the right course of action These tools will have the capability of data analysis modeling computer simulation and optimization for use in designing products and processes International competition also has had its impact on manufacturing education and the government s support of it in the US We see more courses offered in this area in industrial engineering and manufacturing systems engineering departments operations research programs and business schools In fact we see an increasing number of manufacturing systems engineering departments and manufacturing research centers in universities not only in the US but also in Europe Japan and many developing countries
