Restoring Lands - Coordinating Science, Politics and Action Herman Karl, Lynn Scarlett, Juan Carlos Vargas-Moreno, Michael Flaxman, 2012-02-03 Environmental issues vast and varied in their details unfold at the confluence of people and place They present complexities in their biophysical details their scope and scale and the dynamic character of human action and natural systems Addressing environmental issues often invokes tensions among battling interests and competing priorities Air and water pollution the effects of climate change ecosystem transformations these and other environmental issues involve scientific social economic and institutional challenges This book analyzes why tackling many of these problems is so difficult and why sustainability involves more than adoption of greener cleaner technologies

Sustainability as discussed in this book involves knowledge flows and collaborative decision processes that integrate scientific and technological methods and tools political and governance structures and regimes and social and community values The authors synthesize a holistic and adaptive approach to rethinking the framework for restoring healthy ecosystems that are the foundation for thriving communities and dynamic economies This approach is that of collective action Through their research and practical experiences the authors have learned that much wisdom resides among diverse people in diverse communities New collaborative decision making institutions must reflect that diversity and tap into its wisdom while also strengthening linkages among scientists and decision makers From the pre publication reviews Finally we have a book that explains how science is irrelevant without people It s people who decide when and how to use science not scientists This book gives us a roadmap for how to really solve complex problems It involves hard work and creating new relationships between scientists and the public that don t typically exist in our society John M Hagan Ph D President Manomet Center for Conservation Sciences

Agent-Based Simulation of Organizational Behavior Davide Secchi, Martin Neumann, 2015-08-25

The aim of this book is to demonstrate how Agent Based Modelling ABM can be used to enhance the study of social agency organizational behavior and organizational management It derives from a workshop sponsored by the Society for the Study of Artificial Intelligence and the Simulation of Behavior AISB held at Bournemouth University Business School in 2014 on Modelling Organizational Behavior and Social Agency The contents of this book are divided into four themes Perspectives Modeling Organizational Behavior Philosophical and Methodological Perspective and Modeling Organized Crime and Macro Organizational Phenomena ABM is a particular and advanced type of computer simulation where the focus of modeling shifts to the agent rather than to the system This allows for complex and more realistic representations of reality facilitating an innovative socio cognitive perspective on organizational studies The editors and contributing authors claim that the use of ABM may dramatically expand our understanding of human behavior in organizations This is made possible because of a the computational power made available by technological advancements b the relative ease of the programming c the ability to borrow simulation practices from other disciplines and d the ability to demonstrate how the ABM approach clearly enables a socio cognitive perspective on organizational complexity Showcasing contributions from academics and researchers of various backgrounds and discipline this volumes provides a global interdisciplinary perspective

Proceedings of the International Conference on Science, Technology and Social Sciences (ICSTSS) 2012 Azman Kasim, Wan Siti Atikah Wan Omar, Nor Hidayatun Abdul Razak, Nor Lailatul Wahidah Musa, Roslilee Ab. Halim, Siti Rosiah Mohamed, 2014-11-23

Models, Simulations, and the Reduction of Complexity Ulrich Gähde,Stephan Hartmann,Jörn Henning Wolf,2013-11-27 Modern science is to a large extent a model building activity But how are models constructed How are they related to theories and data How do they explain complex scientific phenomena and which role do computer simulations play here These questions have kept philosophers of science busy for many years and much work has been done to identify modeling as the central activity of theoretical science At the same time these questions have been addressed by methodologically minded scientists albeit from a different point of view While philosophers typically have an eye on general aspects of scientific modeling scientists typically take their own science as the starting point and are often more concerned with specific methodological problems There is however also much common ground in middle where philosophers and scientists can engage in a productive dialogue as the present volume demonstrates To do so the editors of this volume have invited eight leading scientists from cosmology climate science social science chemical engineering and neuroscience to reflect upon their modeling work and eight philosophers of science to provide a commentary
