Modern Art And Scientific Thought:

Modern Art and Scientific Thought John A. Richardson, 1971 Information Arts Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use and even influence science and technology A new breed of contemporary artist engages science and technology not just to adopt the vocabulary and gizmos but to explore and comment on the content agendas and possibilities Indeed proposes Stephen Wilson the role of the artist is not only to interpret and to spread scientific knowledge but to be an active partner in determining the direction of research Years ago C P Snow wrote about the two cultures of science and the humanities these developments may finally help to change the outlook of those who view science and technology as separate from the general culture In this rich compendium Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics the physical sciences biology kinetics telecommunications and experimental digital systems such as artificial intelligence and ubiquitous computing In addition to visual documentation and statements by the artists Wilson examines relevant art theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future He also provides lists of resources including organizations publications conferences museums research centers and Web sites

German Art History and Scientific Thought Mitchell B. Frank, 2017-07-05 A fresh contribution to the ongoing debate between Kunstwissenschaft scientific study of art and Kunstgeschichte art history this essay collection explores how German speaking art historians of the late nineteenth and early twentieth century self consciously generated a field of study Prominent North American and European scholars provide new insights into how a mixing of diverse methodologies took place in order to gain a more subtle and comprehensive understanding of how art history became institutionalized and legitimized in Germany One common assumption about early art historical writing in Germany is that it depended upon a simplistic and narrowly defined formalism This book helps to correct this stereotype by demonstrating the complexity of discussion surrounding formalist concerns and by examining how German speaking art historians borrowed incorporated stole and made analogies with concepts from the sciences in formulating their methods In focusing on the work of some of the well known fathers of the discipline such as Alois Riegl and Heinrich Wölfflin as well as on lesser known figures the essays in this volume provide illuminating and sometimes surprising treatments of art history's prior and understudied interactions with a wide range of scientific orientations from psychology sociology and physiognomics to evolutionism and comparative anatomy

The Spiritual Dynamic in Modern Art C. Spretnak, 2014-10-22 This book demonstrates that numerous prominent artists in every period of the modern era were expressing spiritual interests when they created celebrated works of art This magisterial overview insightfully reveals the centrality of an often denied and misunderstood element in the cultural history of modern art

The Domain of Images James Elkins, 2018-08-06 In the domain of visual images those of fine art form a tiny minority This original and brilliant book calls upon art historians to look beyond their traditional subjects

painting drawing photography and printmaking to the vast array of nonart images including those from science technology commerce medicine music and archaeology Such images James Elkins asserts can be as rich and expressive as any canonical painting Using scores of illustrations as examples he proposes a radically new way of thinking about visual analysis one that relies on an object's own internal sense of organization Elkins begins by demonstrating the arbitrariness of current criteria used by art historians for selecting images for study He urges scholars to adopt instead the far broader criteria of the young field of image studies After analyzing the philosophic underpinnings of this interdisciplinary field he surveys the entire range of images from calligraphy to mathematical graphs and abstract painting Throughout Elkins blends philosophic analysis with historical detail to produce a startling new sense of such basic terms as pictures writing and notation **Cézanne's Gravity**

Carol Armstrong, 2018-11-13 A transformative study freeing the artist from outdated art historical narratives and revealing his work as newly strange again Cézanne's Gravity is an ambitious reassessment of the paintings of Paul Cézanne 1839-1906 Whereas previous studies have often looked at the artist's work for its influence on his successors and on the development of abstraction Carol Armstrong untethers it from this timeline examining Cézanne's painting as a phenomenological and intellectual endeavor Armstrong uses an interdisciplinary approach to analyze Cézanne's work pairing the painter with artists and thinkers who came after him including Roger Fry Virginia Woolf Albert Einstein Maurice Merleau-Ponty Rainer Maria Rilke R.D. Laing and Helen Frankenthaler Through these pairings Armstrong addresses diverse subjects that illuminate Cézanne's painting from the nonlinear narratives of modernist literature and the ways in which space and time act on objects to color sensation and the schizophrenic mind Cézanne's Gravity attends to both the physicality of the artist's works and the weight they bear on the history of art This distinctive study not only invites its readers to view Cézanne's paintings with fresh eyes but also offers a new methodology for art historical inquiry outside linear narratives one truly fitting for our time

Benton, Pollock, and the Politics of Modernism Erika Doss, 1995-06 expressionism **Computer Architectures**

Theodora Vardouli, Olga Touloumi, 2019-11-19 Computer Architectures is a collection of multidisciplinary historical works unearthing sites concepts and concerns that catalyzed the cross contamination of computers and architecture in the mid 20th century Weaving together intellectual social cultural and material histories this book paints the landscape that brought computing into the imagination production and management of the built environment whilst foregrounding the impact of architecture in shaping technological development The book is organized into sections corresponding to the classic von Neumann diagram for computer architecture program control unit storage memory input output and computation arithmetic logic unit each acting as a quasi material category for parsing debates among architects engineers mathematicians and technologists Collectively authors bring forth the striking homologies between a computer program and an architectural program a wall and an interface computer memory and storage architectures structures of mathematics and structures of things The collection initiates new histories of knowledge and technology production that turn an eye toward disciplinary

fusions and their institutional and intellectual drives Constructing the common ground between design and computing this collection addresses audiences working at the nexus of design technology and society including historians and practitioners of design and architecture science and technology scholars and media studies scholars *Inside Modernism* Thomas Vargish, Delo E. Mook, 1999-01-01 In this book a professor of literature and a physicist offer a broad new interdisciplinary account of Modernism Thomas Vargish and Delo E Mook encompass physics the visual arts and literature in a thought provoking analysis of the period from the 1880s to World War II Uncovering common structures and values underlying each of these disparate fields the authors define Modernism and its historical location between nineteenth century intellectual conventions that preceded it and the Postmodernism that followed Bridging boundaries that traditionally divide disciplines Vargish and Mook create a uniquely coherent and comprehensive view of the aesthetics and intellectual values that characterize the culture of Modernism **Introduction to Jungian Psychology** C. G. Jung, 2012 Presents Carl Jung's notes of the seminar he gave in 1925 on analytical psychology *Cubism and Futurism* R. Bruce Elder, 2018-06-30 Cubism and futurism were closely related movements that vied with each other in the economy of renown Perception dynamism and the dynamism of perception these were the issues that passed back and forth between the two Cubism and Futurism *Spiritual Machines and the Cinematic Effect* shows how movement became in the traditional visual arts a central factor with the advent of the cinema gone were the days when an artwork strived merely to lift experience out the realm of change and flow The cinema at this time was understood as an electric art akin to X rays coloured light and sonic energy In this book celebrated filmmaker and author Bruce Elder connects the dynamism that the cinema made an essential feature of the new artwork to the new science of electromagnetism Cubism is a movement on the cusp of the transition from the Cartesian world of standardized Cartesian coordinates and interchangeable machine parts to a Galvanic world of continuities and flows In contrast futurism embraced completely the emerging electromagnetic view of reality Cubism and Futurism examines the similarity and differences between the two movements engagement with the new science of energy and shows that the notion of energy made central to the new artwork by the cinema assumed a spiritual dimension as the cinema itself came to be seen as a pneumatic machine **Architecture Design** Mr. Rohit Manglik, 2023-11-22 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels *Idol Anxiety* Josh Ellenbogen, Aaron Tugendhaft, 2011-07-18 This interdisciplinary collection of essays on idolatry including both historical and theoretical contributions shows that the concept of idolatry is helpful for all who study the ways that people interact with and conceive of the things around them

D'Arcy Wentworth Thompson's Generative Influences in Art, Design, and Architecture Ellen K. Levy, Charissa N. Terranova, 2021-03-11 Scottish zoologist D Arcy Wentworth Thompson's visionary ideas in *On Growth and Form* continue to

evolve a century after its publication aligning it with current developments in art and science Practitioners theorists and historians from art science and design reflect on his ongoing influence Overall the anthology links evolutionary theory to form generation in both scientific and cultural domains It offers a close look at the ways cells organisms and rules become generative in fields often otherwise disconnected United by Thompson s original exploration of how physical forces propel and shape living and nonliving forms essays range from art art history and neuroscience to architecture design and biology Contributors explore how translations are made from the discipline of biology to the cultural arena They reflect on how Thompson s study relates to the current sciences of epigenesis self organization biological complex systems and the expanded evolutionary synthesis Cross disciplinary contributors explore the wide ranging aesthetic ramifications of these sciences A timeline links the history of evolutionary theory with cultural achievements providing the reader with a valuable resource

Drawing as a Way of Knowing in Art and Science Gemma Anderson-Tempini,2017-10-01 In recent history the arts and sciences have often been considered opposing fields of study but a growing trend in drawing research is beginning to bridge this divide Gemma Anderson s Drawing as a Way of Knowing in Art and Science introduces tested ways in which drawing as a research practice can enhance morphological insight specifically within the natural sciences mathematics and art Inspired and informed by collaboration with contemporary scientists and Goethe s studies of morphology as well as the work of artist Paul Klee this book presents drawing as a means of developing and disseminating knowledge and of understanding and engaging with the diversity of natural and theoretical forms such as animal vegetable mineral and four dimensional shapes Anderson shows that drawing can offer a means of scientific discovery and can be integral to the creation of new knowledge in science as well as in the arts

Mapping Paradigms in Modern and Contemporary Art Simonetta Moro,2021-07-29 Mapping Paradigms in Modern and Contemporary Art defines a new cartographic aesthetic or what Simonetta Moro calls carto aesthetics as a key to interpreting specific phenomena in modern and contemporary art through the concept of poetic cartography The problem of mapping although indebted to the spatial turn of poststructuralist philosophy is reconstructed as hermeneutics while exposing the nexus between topology space time and memory The book posits that the emergence of mapping as a ubiquitous theme in contemporary art can be attributed to the power of the cartographic model to constitute multiple worldviews that can be seen as paradigmatic of the post modern and contemporary condition This book will be of particular interest to scholars in art history art theory aesthetics and cartography

Entropy and the Second Law of Thermodynamics Robert Fleck,2023-09-25 This book is a brief and accessible popular science text intended for a broad audience and of particular interest also to science students and specialists Using a minimum of mathematics a number of qualitative and quantitative examples and clear illustrations the author explains the science of thermodynamics in its full historical context focusing on the concepts of energy and its availability and transformation in thermodynamic processes His ultimate aim is to gain a deep understanding of the second

law the increase of entropy and its rather disheartening message of a universe descending inexorably into chaos and disorder It also examines the connection between the second law and why things go wrong in our daily lives Readers will enhance their science literacy and feel more at home on the science side of author C P Snow s celebrated two culture science humanities divide and hopefully will feel more at home in the universe knowing that the disorder we deal with in our daily lives is not anyone s fault but Nature s

The Science of Pleasure Harvie Ferguson,2005-09-29 In this rich and original work the author argues that science is the highest expression of bourgeois thought and whilst it may have liberated mankind it has also devised new forms of repression discipline and control

The Great Beyond Paul Halpern,2008-04-21 The concept of multiple unperceived dimensions in the universe is one of the hottest topics in contemporary physics It is essential to current attempts to explain gravity and the underlying structure of the universe The Great Beyond begins with Einstein s famous quarrel with Heisenberg and Bohr whose theories of uncertainty threatened the order Einstein believed was essential to the universe and it was his rejection of uncertainty that drove him to ponder the existence of a fifth dimension Beginning with this famous disagreement and culminating with an explanation of the newest brane approach author Paul Halpern shows how current debates about the nature of reality began as age old controversies and addresses how the possibility of higher dimensions has influenced culture over the past one hundred years

French Daguerreotypes Janet E. Buerger,International Museum of Photography at George Eastman House,1989-11-14 Upon its introduction in 1839 the daguerreotype was hailed as a magical reflection of reality Today these early examples of the first practical photographic process offer fascinating windows into the past The daguerreotypes collected here not only document the birth of photography and its aesthetic and historical legacy but also provide insight into French art and culture Lavishly illustrated this volume is the first complete catalog of the French daguerreotype collection of the International Museum of Photography at George Eastman House Janet E Buerger uses this remarkable collection of images to produce a cultural history of the daguerreotype s most learned following an elite group of mid nineteenth century intellectuals who sought to understand and develop the usefulness potential and beauty of this camera image This varied group including entrepreneurs painters scientists and historians enables Buerger to trace the influence of photography into virtually every area of nineteenth century European intellectual life
