The International Baccalaureate Diploma Programme Tim Pound, 2006-05-02 Introducing a balanced look at the experience of implementing and teaching the increasingly respected qualification the International Baccalaureate this book is a rich resource for all teachers school leaders and managers involved with or considering the qualification

Science Education James F Donnelly, Edgar W Jenkins, 2001-01-26 Who wants to change school science education and why What mechanisms exist to effect change What implications do they have for teachers professionalism These are the principal questions explored in this book The authors focus on strategies for effecting change including decentralized and statutory mechanisms and the use of systems of assessment The authors question the effectiveness of centralized programmes in improving the quality of students science education They suggest that this arises from a failure to acknowledge the contribution that the science teaching profession must make to reform They argue that sustained and effective change embodying improvements in standards depends upon promoting the initiative

Academic Success And Social Power Richard Teese, 2013-04-18 A most significant text that says something new about how student achievement is shaped Richard Teese cuts across much of the recent talk about reform and allows us to think about the issues afresh His findings will fascinate all Professor Simon Marginson Monash University This eye opening study of Australian secondary education looks beyond clichés about excellence to analyse the historically specific nature of the scholarly ideal against which successive generations of Australian students have been judged Drawing on a wealth of strikingly original research Richard Teese offers a penetrating analysis of Victorian secondary schooling in the half century after World War Two This was a era in which higher secondary schooling ceased to be the preserve of an elite and emerged as a system of mass education It was also a period marked by successive waves of reform in curriculum and

assessment Yet at the end of it all Australians have been left with a sharply polarised system of schooling in which the most economically vulnerable populations of young people are also those most at risk of educational failure This book asks the hard questions Are our systems of secondary teaching and the expectations they place on students anachronistic in an age of mass education How far is the curriculum itself responsible for the manifest disparities in achievement between sectors and regions and between boys and girls What has been the universities role in the process of reform and counter reform And what have all these upheavals implied for the practice of teaching

1985 Examinations presents a balanced overview and commentary on all the main aspects of public examinations The key themes are examinations and their context historical political social and educational functions of examination how they work equity and fairness of the process and future of public examinations Recurring issues in the book are the tension between the need for common national standards and the need for diverse individuality and the conflict between competitive functions of examinations as instruments of selection and their descriptive function as reports on standards of performance The author argues that the main aspects of examinations are not given a prominent place in the training of teachers though public examinations have widespread impact on society This book will be an essential read for scholars and researchers of education higher education and also for administrators and policy makers *Educational Research, European Survey* Documentation Centre for Education in Europe,1971 *Learning Science Outside the Classroom* Martin Braund,Michael Reiss,2012-12-06 This book shows how a wide range of contexts for learning science can be used outside of the classroom and includes learning at museums science centres and planetaria from newspapers magazines and through ICT at industrial sites and through science trails at zoos farms botanic gardens residential centres and freshwater habitats in school grounds With contributions from well known and respected practitioners in all fields of science education and through using case studies *Learning Science Outside the Classroom* offers practical guidance for teachers assistant teaching staff and student teachers involved in primary and secondary education It will help enable them to widen the scientific experience and understanding of pupils The advice in this book has been checked for safety by CLEAPSS **Curriculum Studies** Colin Richards,2018-10-03 Originally published in 1978 and as a second edition in 1984 The greatly enlarged second edition of the bibliography contains sections on curriculum history curriculum management official publications and journals It also added expanded sections on the sociology of the curriculum and on curriculum evaluation assessment and accountability reflecting the continuing development of curriculum studies in the United Kingdom the interest shown in the curriculum by scholars in other areas of educational enquiry and the rapid changes in the socio cultural context in which the curriculum is discussed designed and transacted *Practical Work in School Science* Jerry Wellington,2002-01-22 Practical work has been part of science education for just over 100 years and is accepted as an essential and exciting part of understanding this discipline Although it can be costly and sometimes messy it simply has to be done if students and teachers are to progress in their understanding Schools and universities invest millions of pounds in it and the National Curriculum reveres it but what exactly is going on in classrooms around the country and how are the leading practitioners moving with the times This book attempts to reflect on the value and purpose of practical work as part of the scientific curriculum Why are practical exercises so necessary and what do they contribute to the learning process The chapters examine many issues such as how practical work is perceived by students and teachers whether we will move on to the virtual lab the limitations of current hands on work and valuable alternatives to it the connections between practical work in science education and authentic science what
