Number Theory and Modular Forms Bruce C. Berndt, Ken Ono, 2013-11-11 Robert A Rankin one of the world's foremost authorities on modular forms and a founding editor of The Ramanujan Journal died on January 27 2001 at the age of 85 Rankin had broad interests and contributed fundamental papers in a wide variety of areas within number theory geometry analysis and algebra To commemorate Rankin's life and work the editors have collected together 25 papers by several eminent mathematicians reflecting Rankin's extensive range of interests within number theory Many of these papers reflect Rankin's primary focus in modular forms It is the editors fervent hope that mathematicians will be stimulated by these papers and gain a greater appreciation for Rankin's contributions to mathematics This volume would be an inspiration to students and researchers in the areas of number theory and modular forms **American Book Publishing Record**, 2004 *The British National Bibliography* Arthur James Wells, 2004 **Elliptic and Modular Functions from Gauss to Dedekind to Hecke** Ranjan Roy, 2017-04-18 This thorough work presents the fundamental results of modular function theory as developed during the nineteenth and early twentieth centuries It features beautiful formulas and derives them using skillful and ingenious manipulations especially classical methods often overlooked today Starting with the work of Gauss Abel and Jacobi the book then discusses the attempt by Dedekind to construct a theory of modular functions independent of elliptic functions The latter part of the book explains how Hurwitz completed this task and includes one of Hurwitz's landmark papers translated by the author and delves into the work of Ramanujan Mordell and Hecke For graduate students and experts in modular forms this book demonstrates the relevance of these original sources and thereby provides the reader with new insights into contemporary work in this area *Ramanujan's Place in the World of Mathematics* Krishnaswami Alladi, 2021-09-17 The First Edition of the book is a collection of articles all by the author on the Indian mathematical genius Srinivasa Ramanujan as well as on some of the greatest mathematicians in history whose life and works have things in common with Ramanujan It presents a unique comparative study of Ramanujan's spectacular discoveries and remarkable life with the monumental contributions of various mathematical luminaries some of whom like Ramanujan overcame great difficulties in life Also among the articles are reviews of three important books on Ramanujan's mathematics and life In addition some aspects of Ramanujan's contributions such as his remarkable formulae for the number π his path breaking work in the theory of partitions and his fundamental observations on quadratic forms are discussed Finally the book describes various current efforts to ensure that the legacy of Ramanujan will be preserved and continue to thrive in the future This Second Edition is an expanded version of the first with six more articles by the author Of note is the inclusion of a detailed review of the movie *The Man Who Knew Infinity* a description of the fundamental work of the SASTRA Ramanujan Prize Winners and an account of the Royal Society Conference to honour Ramanujan's legacy on the centenary of his election as FRS **Mathematical Reviews**, 2005 **Books In Print 2004-2005** Ed Bowker Staff, Staff Bowker, Ed, 2004
