Nutrition and Resistance to Climatic Stress Harold Hanson Mitchell, Marjorie Edman, 1949 **Nutritional Needs in Cold and High-Altitude Environments** Committee on Military Nutrition Research, Institute of Medicine, 1996-05-29 This book reviews the research pertaining to nutrient requirements for working in cold or in high altitude environments and states recommendations regarding the application of this information to military operational rations It addresses whether aside from increased energy demands cold or high altitude environments elicit an increased demand or requirement for specific nutrients and whether performance in cold or high altitude environments can be enhanced by the provision of increased amounts of specific nutrients *Nutritional Needs in Hot Environments* Institute of Medicine, Committee on Military Nutrition Research, 1993-02-01 This volume examines the current state of knowledge concerning the influence of a hot environment on nutrient requirements of military personnel A parallel concern is ensuring that performance does not decline as a result of inadequate nutrition The committee provides a thorough review of the literature in this area and interprets the diverse data in terms of military applications In addition to a focus on specific nutrient needs in hot climates the committee considers factors that might change food intake patterns and therefore overall calories Although concern for adequate nutrition for U S soldiers in Saudi Arabia prompted the initiation of this project its scope includes the nutrient needs of individuals who may be actively working in both hot dry and hot moist climates **National Nutrition Policy Study, 1974** United States. Congress. Senate. Select Committee on Nutrition and Human Needs, 1974 *Research in Foods, Human Nutrition, and Home Economics at the Land Grant Institutions* United States. publications designed to inform both civilian and military scientists and personnel about issues related to nutrition and military service Among the many other stressors they experience soldiers face unique nutritional demands during combat Of particular concern is the role that dietary protein might play in controlling muscle mass and strength response to injury and infection and cognitive performance The first part of the book contains the committee s summary of the workshop responses to the Army s questions conclusions and recommendations The remainder of the book contains papers contributed by speakers at the workshop on such topics as the effects of aging and hormones on regulation of muscle mass and function alterations in protein metabolism due to the stress of injury or infection the role of individual amino acids the components of proteins as neurotransmitters hormones and modulators of various physiological processes and the efficacy and safety considerations associated with dietary supplements aimed at enhancing performance *Higher and Colder* Vanessa Heggie,2019-08-02 During the long twentieth century explorers went in unprecedented numbers to the hottest coldest and highest points on the globe Taking us from the Himalaya to Antarctica and beyond *Higher and Colder* presents the first history of extreme physiology the study of the human body at its physical limits Each chapter explores a seminal question in the history of science while also showing how the apparently exotic locations and experiments contributed to broader political and social shifts in twentieth century scientific thinking Unlike most books on modern biomedicine *Higher and Colder* focuses on fieldwork expeditions and exploration and in doing so provides a welcome alternative to laboratory dominated accounts of the history of modern life sciences Though centered on male dominated practices science and exploration it recovers the stories of women s contributions that were sometimes accidentally and sometimes deliberately erased Engaging and provocative this book is a history of the scientists and physiologists who face challenges that are physically demanding frequently dangerous and sometimes fatal in the interest of advancing modern science and pushing the boundaries of human ability *Human Evolutionary Biology* Michael P.
