Nutritional And Toxicological Significance Of Enzyme Inhibitors In Foods:

Nutritional and Toxicological Significance of Enzyme Inhibitors in Foods Mendel Friedman, 2013-03-09 Soybean proteins are widely used in human foods in a variety of forms including baby formulas flour soy protein concentrates soy protein isolates soy sauces textured soy fibers and tofu The presence of inhibitors of digestive enzymes in soy proteins impairs nutritional quality and possible safety of this important legume Normal processing conditions based on the use of heat do not completely inactivate these inhibitors so that residual amounts of plant protease inhibitors are consumed by animals and man Inhibitors of digestive enzymes are present not only in legumes such as soybeans lima beans and kidney beans but also in nearly all plant foods including cereals and potatoes albeit in much smaller amounts The antinutritional effects of inhibitors of proteolytic enzymes have been widely studied and can be ameliorated by processing and or sulfur amino acid fortification A more urgent concern is reports that rats fed diets containing even low levels of soybean derived inhibitors which are found in foods such as soy based baby formulas may develop over their lifespan pancreatic lesions leading eventually to neoplasia or tumor formation On the other hand recent studies suggest that certain enzyme inhibitors from plant foods may prevent cancer formation in other tissues A key question therefore is whether inhibitors from plant foods constitute a human health hazard

Nutritional and Toxicological Consequences of Food Processing Mendel Friedman, 2013-11-21 A variety of processing methods are used to make foods edible to permit storage to alter texture and flavor to sterilize and pasteurize food and to destroy microorganisms and other toxins These methods include baking broiling cooking freezing frying and roasting Many such efforts have both beneficial and harmful effects It is a paradox of nature that the processing of foods can improve nutrition quality safety and taste and yet occasionally lead to the formation of anti nutritional and toxic compounds These multifaceted consequences of food processing arise from molecular interactions among nutrients with each other and with other food ingredients Since beneficial and adverse effects of food processing are of increasing importance to food science nutrition and human health and since many of the compounds formed have been shown to be potent carcinogens and growth inhibitors in animals I organized a symposium broadly concerned with the nutritional and toxicological consequences of food processing The symposium was sponsored by the American Institute of Nutrition AIN Federation of American Societies for Experimental Biology FASEB for its annual meeting in Washington D C April 15 1990 Invited speakers were asked to develop at least one of the following topics 1 Nutrient nonnutrient interactions between amino acids proteins carbohydrates lipids minerals vitamins tannins fiber natural toxicants etc 2 Effects of radiation 3 Thermally induced formation of dietary mutagens antimutagens carcinogens anticarcinogens antioxidants and growth inhibitors 4 Effects of pH on nutritional value and safety

exposure assessment and detoxification this reference comprehensively covers the formation characteristics and control of various toxins that occur in the production storage handling and preparation of food The author discusses toxin sources mechanisms routes of exposure and absorption and their chemical and biochemical components to prevent contamination of food products and reduce epidemics of foodborne disease The book contains more than 3000 references to facilitate further research as well as recent guidelines from the FDA and World Health Organization regarding food hygiene and safety

Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A J M Jansman, G D Hill, J Huisman, A F B Van Der Poel, 1998-07 This publication contains the proceedings of the 4th International Workshop on Antinutritional Factors in Legume Seeds and Oilseeds held in Toledo Spain on 8-10 March 2004 This series of meetings bring together experts working in this field of Science from throughout the world A major feature of each conference session is an invited review which outlines the advances that have been made in a particular area since the last meeting A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series number of crop products as potential protein sources for animal feeding were considered for the first time These included cottonseed meal linseed meal and sunflower seed meal The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention A major change at this meeting was the greater consideration of the effects both positive and negative of the consumption of these seeds for human nutrition A major review on the development of allergenicity to legume seed in humans is included There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels Overall from the 5 conference sessions there are 52 papers Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding **Toxic**

Substances in Crop Plants J. P. Felix D'Mello, C. M. Duffus, John H. Duffus, 1991 This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti nutritional effects in animals and man and the potential for detoxification The distribution and ecological significance of these compounds is also addressed Continuing disquiet over the use of animal by products in livestock nutrition has provided renewed impetus for the greater exploitation of conventional and novel crop plants both as food and as industrial raw materials However a major factor restricting the utilisation of such crops in animal nutrition is the presence of a diverse array of toxic substances capable of inducing effects ranging from loss

of hair and wool to severe neurological disorders and even death. Significant advances have been made to establish the nature of these compounds and to assess their effects in animals and man. As in other branches of biomedical research, these developments have been achieved through the multidisciplinary efforts of chemists, biochemists, toxicologists, nutritionists, and molecular geneticists. This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti-nutritional effects in animals and man and the potential for detoxification. The distribution and ecological significance of these compounds is also addressed.

Absorption and Utilization of Amino Acids Mendel

Friedman, 2018-04-19. Containing 45 papers written by outstanding international authors from 14 countries, this three-volume compendium brings together the elements needed to understand the factors which influence the utilization of amino acids. The wide-ranging topics include descriptions of metabolic pathways and mechanisms of the biological utilization of amino acids as well as factors that influence amino acid bioavailability in enteral and parenteral nutrition. The use of amino acids to improve the quality and safety of the diet is presented. Also discussed are amino acid precursors of biogenic amines and the role of amino acids in atherosclerosis, cancer, and immunity. Scientists from many disciplines will benefit from this broad overview.

Food Proteins Shuryo Nakai, H. Wayne Modler, 1996-12-17. Neue Verfahren der computergestützten Aufklärung und gentechnologischen Modifikation von Eiweißstrukturen haben die Proteinchemie revolutioniert. Dieses Buch verbindet klassische Methoden mit aktuellen neuronalen Netzwerken, genetischen Algorithmen. Der Anwender, speziell aus dem Nahrungsmittelsektor, wird befähigt, komplizierte Probleme systematisch zu lösen, nicht wie bisher oft durch Trial and Error. Neben theoretischen Grundlagen werden die Eigenschaften von Nahrungseiweißen und deren analytische Charakterisierung diskutiert, auch Trennungs- und Reinigungsverfahren für Proteine sowie gezieltes biotechnologisches Design neuer Verbindungen kommen zur Sprache. Ein Nachschlagewerk für Forschung und Ausbildung.

Feedstuff Evaluation Julian Wiseman, D.J.A. Cole, 2013-10-22. Feedstuff Evaluation contains the proceedings of the 50th University of Nottingham Easter School in Agricultural Sciences held at Sutton Bonington in July 1989. The book presents papers discussing a wide range of topics on the accurate evaluation of feedstuffs for livestock. Initially, systems of expressing the nutritive value of feeds are considered. Modifications to feeding value as influenced by animal factors, including intake and palatability, are discussed. Specific dietary ingredients, being plant polysaccharides, fats, minerals, and vitamins, are detailed. Prediction of the nutritive value of compound feeds and individual feeds through classical wet chemistry and the more recent NIR is assuming considerable importance in the rapid evaluation of diets. Associated with these developments is an appreciation of the relevance of both inter- and intra-laboratory variation in determinations. Finally, the need to collate information into an interactive data base is being actively pursued. It is evident that safety of animal feeds is becoming an increasingly topical issue, and the last session considered the relevance of naturally occurring toxic factors, residues, mycotoxins, and finally animal pathogens. Veterinarians, farmers, farm administrators, and those involved in every aspect of nutrient supply to animals will

Bonfield,James W. Anderson,2012-12-06 Twenty years ago the very idea of an international conference on the fiber contained in plant food would have been totally inconceivable At that time fiber was generally viewed as an inert component of food of no nutritional value and consequently considered as a contaminant the removal of which would enhance the purity of a product It was measured by a now obsolete and almost worthless test introduced in the last century for veterinary rather than human nutrition and what was measured was referred to as crude fiber containing part of the cellulose and lignin but none of the numerous components of fiber now known to play important roles in the maintenance of health There were a few lone voices prior to the last two decades who had extolled the laxative properties of the undigested portion of food assuming that these were related to its irritant action on the bowel mucosa In retrospect this was a total misconception and softage would have been a more appropriate term than roughage since its presence insured soft not irritating colon content

N. Clare Mills,Peter R. Shewry,2008-04-15 Plant Food Allergens is concerned with a paradox of immense potentially life threatening significance to about 1 in 100 adults and 1 in 10 children The paradox is that certain nutritious proteins from wholesome foods can act as if they were harmful sometimes deadly poisons to these people who possess an allergy to them In order to study the complex problems of food allergy a EU funded network called PROTALL was set up bringing together a wide range of clinicians and scientists This important book is largely based on the outcome of its investigations Written by over 30 acknowledged experts and carefully edited by Dr Clare Mills and Professor Peter Shewry themselves well known internationally this important work covers all major aspects of the subject Commencing with introductory chapters the comprehensive contents of Plant Food Allergens includes details of the major allergens including plant lipid transfer proteins the 2S albumin proteins the cereal amylase trypsin family latex and plant chitinases profilins bet v 1 homologous allergens

and plant seed globulins The book concludes with important chapters on the assessment of the allergenicity of novel and GM foods and the monitoring of and technological effects on allergenicity of proteins in the food industry Plant Food Allergens is an essential purchase for a wide range of scientists and clinicians including plant and agricultural scientists chemists allergy specialists food scientists and technologists pharmacologists physiologists and nutritionists Libraries in all research establishments and universities researching and teaching these subjects will need copies of this important book on their shelves Dr Clare Mills is based at The Institute of Food Research Norwich UK Professor Peter Shewry is based at Rothamsted Research Harpenden UK Impact of Processing on Food Safety Lauren S. Jackson, Mark G. Knize, Jeffrey N. Morgan, 2012-12-06 The contents of this book are the proceedings of the ACS symposium Impact of Processing on Food Safety which was held April 16-17 1997 at the American Chemical Society National Meeting in San Francisco CA This symposium brought together researchers from diverse backgrounds in academia government and industry Twenty speakers discussed topics ranging from the regulatory aspects of food processing to the microbiological and chemical changes in food during processing The main goal of food processing is to improve the microbial safety of food by destroying pathogenic and spoilage organisms Food processing can also improve food safety by destroying or eliminating naturally occurring toxins chemical contaminants and antinutritive factors Unfortunately processing can also cause chemical changes that result in the formation of toxic or antinutritive factors The purpose of this book is to summarize our knowledge of both the beneficial and deleterious effects of processing Chapter 1 considers the consumer's perceptions about food contaminants and food processing Chapter 2 summarizes the effects of traditional and nontraditional processing methods on microorganisms in food Chapters 3-6 review the effects of processing on lipids fatty acids and cholesterol in food Changes in the nutritive value of vitamins and minerals as a result of processing are discussed in chapter 7 Chapter 8 concentrates on how processing reduces the allergenicity of some foods
