Alessandra Pagliarani, Fabiana Trombetti, Vittoria Ventrella, 2012 Organotins are widespread contaminants especially of water environments Their chemically versatile structure makes organotin compounds able to bind to a variety of biomolecules thus widely affecting biological functions Trisubstituted molecules namely tributyltin TBT and triphenyltin TPhT have been widely employed in antifouling paints and are also exploited as plastic stabilizers that unfortunately cause harmful biological effects Persistent bioaccumulation has resulted in organotins becoming a significant environmental threat Chapter by chapter the biological and biochemical effects of organotins in aquatic organisms (Japan), 1983 **Metal Compounds in Cancer**

**Therapy** S.P. Fricker, 2012-12-06 The discovery of the antitumour activity of cisplatin in 1965 and its subsequent introduction into clinical trials in 1971 was the catalyst for a major international research effort investigating the potential of metal compounds in cancer therapy Cisplatin now occupies an important place in the armamentarium of the oncologist due to its effectiveness in the treatment of testicular cancer A second generation analogue carbo platin offers reduced toxicity together with therapeutic activity which gives it a place in the front line therapy of genitourinary cancers These and other successes have encouraged the search for novel metal based drugs for cancer therapy Research has shown that metal compounds have potential for activity not only as cytotoxic antitumour agents but also in areas such as adjuvant therapy

diagnosis and immunotherapy The aim of this book is to review and describe the major achievements and developments arising from this international research effort The contributing authors come from laboratories throughout Europe and America and represent the many disciplines characteristic of this research such as clinical research pharmacology tumour biology and inorganic medicinal chemistry

Wilson, 2012-12-06 The field of surface coatings is now so extensive and is developing so rapidly that no individual person could be expected to master it in its entirety Hence the days have gone when a lone author could compile a comprehensive treatise on the topic without overlooking many of the most significant developments Yet the very growth and diversity of surface coatings make it essential that workers in the field should have access to up to date and authoritative reviews It is to satisfy this need that we have assembled our team of authors each of whom is an expert in his or her branch of the subject and is well able to assess what is most significant and exciting within that branch They have been encouraged to develop their themes in what they have felt to be the most appropriate way with minimal editorial interference from us We believe that the results of their labours will be of benefit to those engaged not only in basic research but also to those working in product development and in testing and evaluation of coatings
